There is still another class of goods which may well be brought to the front in honor of the hanging of the crane. Tools. There does not seem anything very romantic about these—anything very suitable to this home-coming season. Nevertheless, tools have done much to make the home attractive. If the house is new there will be a door swollen so that it will not close—a cupboard door warped so that it refuses to open at all at first, and then flies back, causing bitter words on the part of the groom and bitter tears on the part of the bride. And all the while all that is needed is a good plane—a few shavings off and the door will open and close.

Great Need of Tools.

Screw drivers are needed to facilitate the hanging of curtains. A stepladder is needed for the same purpose. A wrench will enable the immediate stopping of a leaky tap, if such there be. A hammer is a household need.

Then there are little carpentering jobs to be done—a shelf to be put up, a cellar step to be replaced. A saw is needed. But the variety of tools required is wide beyond belief. To move into a house seems such a simple thing—such a simple thing until you have tried it.

Still other little fixtures will be in demand. Even the most thoughtful groom will not remember that his bride will

UNFAIR MAIL-ORDER BUYING.

The unfairness of the competition which the retail dealer has sometimes to contend with was strikingly demonstrated in the circumstances related this week by a hardwareman in a small Eastern Ontario village to a representative of Hardware and Metal. This dealer has noticed for some time back that the people in his neighborhood have been getting into the habit of ordering goods from catalogue houses. Any day in the week large consignments of goods can be seen at the station billed to people in that vicinity from the mail order houses. The practice has been cutting into the trade of the local merchant to no inconsiderable degree.

This dealer has noted one tendency on the part of the people who are buying by mail which presents a serious aspect. On several occasions he has heard of women going around the neighborhood soliciting orders for a catalogue house. On making inquiries, he found that they were anxious to buy certain articles themselves, but that their purchases would not total $25. In order to bring the total up to that figure, and thus secure prepayment of the freight, they were trying to induce other women to buy something and send in all the orders together. This "clubbing," he finds, has been done a great deal.

The irony of the situation lies in the fact that all the people engaged in this practice are customers of his, and some of them have been running large bills for extended periods. He has found it difficult to get any money out of them, and has been going on supplying their immediate wants on the time basis. His indignation when he discovered that some of the worst delinquents in this respect were buying from a catalogue house right along and sending large sums of money, can well be imagined.

This is not an isolated case by any means. The same thing is going on all over the country probably. Every hardwareman may be extending credit to some customers who are thus abusing his confidence by sending their money out of town.

What can the local dealer do in such a case? To revert to the cash system of doing business is one solution; but it is probably a solution which a great many will not care to take. The answer seems to be to adopt improved methods of merchandising, which will make it possible to compete with the mail order house on a more even basis. Every effort should be made also to educate the public to the unfairness and the folly of buying by catalogue. The dealer who "fights back" at the mail order house does not often come out second best.

UNIFORM HOLIDAY DATES.

The half-holiday season is at hand, and one is again forcibly impressed with the folly of lack of uniformity in the dates. Why should one town declare a half-holiday for Wednesday afternoons and the next town shut down on Thursdays? This practice is very demoralizing on the work of the traveling men, who never know when they stop off in a town whether they will find a store open or not. It cuts up their territories, and means much loss of time.

One afternoon is as good as another. Why cannot a certain day be fixed for half-holidays wherever the holiday practice is observed?

ADVERTISING CRITICISMS.

In writing an advertisement, there are so many points to be borne in mind that it is doubtful if perfection can ever be attained. One of the greatest ad.-writers in America, a man whose salary runs into four figures, confessed recently that he had never turned out a piece of work which had satisfied himself absolutely or which was above criticism in every way.

It is much easier to criticize than to construct; particularly with respect to advertising. Men who cannot originate an idea of their own, can tell at once what is lacking in the completed work of other men. Criticism should, therefore, always be modulated by recognition of the difficulties of construction.

Criticism is, nevertheless, a valuable medium for those who desire to learn. It is wise to gain the opinions of other men. No one man has a monopoly of knowledge or brains, and none are more short-sighted than the individuals who refuse to learn or to profit from the experience and views of others. It is well to "see ourselves as others see us," to secure impartial opinions of our own work from others.

Criticisms of retail advertisements have constituted a regular feature in Hardware and Metal, and much good has been done thereby. We have at all times endeavored to steer a clear course between the extremes of over-severity and over-leniency, and have given suggestions for the improvement of each ad., based on principles upheld by the best exponents of advertising. Hardware dealers are invited to send in advertisements for criticism in this department.

STUDYING COMPETITORS' METHODS.

The advantages of a retail dealer getting out among his competitors cannot be questioned. There are some, however, who do not take full benefit from their experiences. They visit other towns and stores, but instead of studying methods, displays, etc., closely, take a superficial view of everything, and return with nothing.

No keen business man can step into another's store without learning something. If he is observant, there will be features about the store interior, the equipment, the attitude of the dealer in serving customers, the display of goods or the store appearance, that will teach him something new. Many a man who cannot see faults in his own methods will readily detect them in other stores and profit thereby.

The writer knows of one dealer who, whenever he is away from home, always makes it a point to call on as many confreres in the trade as possible. He observes the equipment, the display, the character of goods handled and notices the movements of the men behind the coun-

ter. He learns from both their commendable methods and their faults, and returns better equipped in knowledge of his own business.

Methods of doing business are more important than simply a history of progress. Readers of this paper will no doubt long since have noticed the value we attach to the methods of men — how they have done this and that to make their business successful — rather than a history of when they began business, how often they have enlarged their stores and how many clerks and delivery men they now employ.

Money makers and time and money savers are what every dealer wants to know about, and he should study these with every available opoprtunity.

CHANGE IN MARKETS.

With this issue a change is inaugurated in the method of reporting Western markets. Reports from Winnipeg are included with those from Montreal and Toronto on the regular market pages. The current Western quotations will be found with the other quotations in the three-page section, used for this purpose, which follows reading matter.

POINTED EDITORIALS.

The Made-in-Canada train is attracting a lot of interest in the West.

* * *

It is not too late now to start the wedding present trade campaign; but another week will be.

* * *

A scarcity in all plumbing and heating goods is predicted this year. If your stocks are low, better get busy.

* * *

The growth of the country has very distinctly outpaced the industrial development; in some lines at least.

* * *

Every dealer and clerk should realize that cost of doing business and profit should be calculated on the same thing.

* * *

Forcing goods on a customer is like compelling a woman to do something. Persuade both by suggestion and they will probably think they were the originators of the idea.

* * *

It is a great thing to be able to forget, upon occasions, but the man who can remember his last year's difficulties is putting himself in a position where he can avoid the recurrence of those difficulties.

* * *

It may be easy to impose upon Mrs. Newly-Wed through her ignorance of household matters. It is poor policy, however. She will grow wiser and perceive just how she was cheated. And then the customer will promtly be transferred to another store.

* * *

In various parts of Canada merchants are again adopting the weekly half holiday. Wherever at all possible this is undoubtedly a wise move. It gives both the dealer and his clerk a recreation time, which everybody needs, and will fit all for better work the remainder of the week.

About Pipe, But No Dream

WHEN, late last fall, the manufacturers announced their intention of keeping their mills running steadily all winter, that they might not run short of soil pipe in 1912, it appeared that the future year's supply was assured. As the winter advanced, and the soil pipe mills were kept running, the certainty of the supply seemed to remove all need of anxiety; yet at the present time—with the real demand hardly appeased at all—there is a scarcity in pipe.

How such a thing should be is hard to understand at first consideration. But upon a careful review of the circumstances the reasons come to light; and those who found difficulty in getting this drain pipe last year will see that they stand in danger of experiencing an even greater shortage before the snow checks the present demand.

Despite the manufacturers' decision to run their mills the winter through, in order to get a reserve supply of soil pipe which would enable them to meet the orders which they anticipated would be large, there is, at the present time, less soil pipe on hand than there was at this season in 1911. It would appear, therefore, that given a demand in the coming months equal to that of the corresponding months last year, the scarcity will be even greater than then. There is, however, one fact which must not be lost sight of. Last summer there was a wave of excessive heat—some may remember it and perspire at the recollection. That hot wave necessitated the closing down of the mills for nearly a fortnight; and when it is borne in mind that one concern alone melts 100 tons of iron a day, for the production of soil pipe, it will be understood that a complete cessation of operations for ten days or two weeks means a tremendous reduction in the total supply.

It seems reasonable to suppose that there will be no such protracted period of inactivity this year, so that even with the present reduced reserve, the fall should find a greater supply of soil pipe than there was in 1911.

On the other hand, the demand this year gives promise of being larger than last. Orders at this early date, indeed, are much in excess of those received during the opening months of 1911—a fact which is partially accounted for by the early start which builders were able to make in many districts; and partially, no doubt, by the reserve supply which some men are now laying in as a safeguard against a shortage such as that of last year.

Of course, despite the good resolutions of the manufacturers, the mills were not kept busy continuously since last fall. A shortage of coke prevented this. Had this fuel not become so scarce, by reason of a cessation of production by the United States operators, the supply of soil pipe would have been satisfactory. As it is the reserve is already reduced, and prices have been forced up.

It is not altogether the operation of that old law of supply and demand which has caused the higher price level. Coke, as well as being scarce, is high in price. Pig iron, too, is more costly than for some time. With the raw material and the fuel needed for production costing more, it is therefore natural that the finished article should cost more. The makers must get their fair profit.

But it is not the ten per cent. advance in price that is the thing of greatest importance at this period. It is rather the scarcity—and the possible future scarcity of the commodity. Dealers are going to be called upon to supply farmers and contractors with a good deal of soil pipe.

Advertising for Wedding Present Trade

The Hardwareman Should Advertise Both Extensively and Well for Reasons Explained Below—Points to be Brought Out—A Suggested Layout for a Practical Advertisement.

Special attention should be paid to the question of advertising wedding present lines. For at least one very excellent reason, more attention is required than when ordinary hardware lines are in question. The reason is this. When a hardwareman advertises tools or builders' supplies say, he is dealing with goods exclusively his own. When he turns his hand to cutlery, silverware and brass goods, he gets into a field where competition is both wide and keen. The jeweler, the fancy goods dealer, even the bookseller and dry goods man, handle these lines. The hardwareman finds the necessity upon him, therefore, of outbidding his rivals for public favor. He has to prepare catchy and forceful copy.

The same condition makes it necessary for him to do quite a little advertising. The hardwareman can take it for granted that some, if not all, of his competitors will be making a determined effort to secure the wedding present trade through the medium of the local newspapers. In the case of a great many dealers, the necessity will be doubly felt for the reason that they are but newly embarked on the handling of such goods. Where the hardwareman has only recently taken up brass goods, cut glass and similar lines, he will find that he must take steps to make the public aware of the fact. People have acquired the habit of going elsewhere for such articles. To break them of the habit, the hardwareman must first of all acquaint them with the fact that he handles the goods and then demonstrate that he handles them right.

There is still another reason why the hardwareman should go about advertising at this stage in real earnest. He has the handling of some lines which are not to be found elsewhere, and which are always in demand during the wedding season; "kitchen shower" lines and practical household articles. By good publicity, he can bring people to see the wisdom of giving practical gifts and increase his sales in those lines.

For all of which reasons, the hardware dealer should use plenty of advertising space in pushing the sale of wedding gifts and should devote his best thought and effort to using the space to advantage.

One of the best advertisements which the writer has encountered so far this season was that of a far west hardware dealer, who apparently is out to capture a big share of the wedding present trade. In three-column, six-inch space, he gives a forceful talk on the many lines which are to be found in his store, under the heading, "Everything suitable for wedding presents." This advertisement contains prices and descriptions of many articles, ranging from cut glass berry bowls to carpet sweepers. Six illustrations were shown, as follows: Cut glass berry bowl, cabinet of silver, silver cake dish, brass kettle, carpet sweeper and vacuum cleaner.

It will pay every dealer to use his advertising space at least once with an ad. of this description, to show the varied nature of the stock in the hardware store. In this respect, the hardwareman has a big advantage over his rivals for the wedding present trade. He has more to offer. Customers have a larger and more varied assortment to choose from. This fact is the hardwareman's trump card, and he should not hesitate to lead it.

A suitable headline for an advertisement pointing out the pre-eminence of the hardware store in point of assortment, would be, "**Choose from the largest stock,**" or, if space allowed, a two-line head, "**A good assortment ensures a satisfactory selection—We have the most varied stock in town.**"

Appealing to the Practical.

Do not be content with the one appeal. Change the copy often. The next point to urge would be the selection of practical gifts. When people decide to give a practical gift, they perforce go to the hardware store, so it goes without saying that the practice is one the hardwareman should encourage.

In preparing an advertisement along this line, the first consideration is the headline. Make it short and to the point:

GIVE A USEFUL WEDDING GIFT

This headline should be followed by a brief talk to show why useful gifts are advisable. Something to this effect:

"The day when all wedding presents were of the showy order has passed. The practical gift is now appreciated above all others. A gift is valued according to the service of the recipients will get out of it. Experience has taught that newly married couples need articles for table use and household utensils more than fancy knickknacks and tawdry ornaments. Give them something they will appreciate as long as it lasts! Get the right quality and it will last forever."

Laying the Ad. Out.

Wherever possible use cuts. The use of illustrations in connection with this advertisement would add very considerably to its selling power.

Now for the layout. Suppose that the space to be used is three-column wide. Put the heading right across the top. Under it, in a little wider than one-column space put the "talk" outlined above, and on each side have cuts, filling out the three-column space. Each cut should be accompanied by a brief description printed beneath. The more practical the nature of the article shown in the cuts, the more fitting they will appear.

Beneath that again have two rows of articles with prices, each row set column and a half wide, with the three-column heading above: "Every article below would be appreciated—The prices are right." The name of the firm, store address, telephone number and slogan (if any) would round off a highly practical and striking advertisement.

The Value of Illustrations.

Illustrations have an especial value at this time of year. People are looking for suitable gifts. They look through the newspapers for suggestions from the ads. contained therein. A picture of an article which they know would be suitable attracts them at once and they read the advertisement through.

Cuts are especially useful to the hardwareman who has only recently gone into the lines in demand for wedding gifts. They enable him to forcibly impress the fact of his entry into the field on the public. All will see the illustrations, whereas only a certain percentage would read his printed statement of the case.

Practical Presents Much in Favor

The Day When a Gift Had to be Ornamental Only Has Passed—Sweepers, Vacuum Cleaners, Refrigerators, and Stoves are Given and Appreciated—It is Such Articles Which are Bought With the Checks Given by Crusty Old Uncles.

A story is told of a small boy—just a little beyond the Santa Claus age—who, being asked what he wanted for Christmas, remarked, "I don't care what you give me, Muzzie, just so long as it isn't something useful."

The child spoke as a child. He wanted a toy—something which he could play with—something which would amuse him in his lonely hours.

Was it not Stevenson who said, "Men are only children grown up?" Stevenson, if it was he, knew what he was talking about, for men too want to be amused; and so do women. They want toys, only their taste in toys changes. To a child the useful is detestable. To the man and woman the useful is delectable. Especially is this so where the Newly Weds are concerned. Their great toy is their house—the home to which they have looked forward for months. Anything which is going to add to the appearance or comfort of that home is going to meet favor in their eyes. Useful—why it is the useful thing for which they most long.

Why the Useful Gift.

So, at this season of weddings, there is no need for dealers to relegate to the background all those goods which are practical, and which appeal to the housekeeping instinct. House-keeping is after all necessary to home-making, and this is a season of home-making. To some, the thought of giving the bride something which she would use in her every day work. will not appeal strongly; but there are others—those most intimate, who will see that the outside friends are sending enough ornamental gifts. They will appreciate that two sets of carvers are likely to meet the needs of the young couple, and they will resolve to give something which others will hardly think of, but which they know the bride will appreciate.

Think of the articles of a useful nature which will appeal to the bride and to the bride-groom too. To begin with there is the carpet sweeper, the woman's daily friend. There was a time when people seemed to wish their gifts to be put carefully away, to be gazed upon only on such state occasions as the minister's visit, a funeral, or an even more solemn wedding. To the credit of mankind this day has about passed. No more are those wax flowers, which stood under glass upon the mantel popular as gifts. If a present is really used nowadays the giver is truly flattered; so the fact that a sweeper will be of actual service to the bride is something in its favor.

Suitable for Brother.

Such a gift as that is one which appeals to a young brother of the bride, or to a sister. The bride knows she will need this. Far be it from her to suggest that she would like brother or sister to give her a sweeper, but she can casually remark that a sweeper would be acceptable—oh! nothing would be more natural.

Then there are vacuum cleaners—vacuum cleaners which eat dirt and make no fuss about it, no fuss which necessitates a thorough dusting as a sort of house-keeping chaser.

There is not a bride, probably, who would not be deligted by the gift of a vacuum cleaner. What a present that would be for father to make—or for a brother who is himself earning money in fairly large quantities. Vacuum cleaners do not cost such a tremendous sum, and they give service steadily. They are the servant in the house. The maid where there no maid. With a vacuum cleaner it is not necessary for the bride to wrap a towel about her head, throw open the windows and sweep madly. The bride will appreciate this, and will rejoice accordingly in the vacuum cleaner that is hers through the kindness of a true friend.

Overcoming Training of Years.

The thing which dealers need to remember in connection with sweepers, vacuum cleaners, and similar lines, is that they belong to a class of goods which many do not connect with the word gift. While the useful things have been recognized as suitable for presents, yet the training of years is not easily forgotten. When a man or woman thinks, "Mamie is going to be married, I must get her a present," the thought of ornaments, and similar lines at once chases across the brain in mental moving pictures. All good presents these, but there are other possibilities, and it is to secure for sweepers, refrigerators, vacuum cleaners, and like articles a place beside the ornamental on the mental picture film that the dealer must work. He must suggest the suitability of these goods as presents. People will realize the truth of the suggestion, and purchases will follow.

What is true of sweepers and vacuum cleaners is equally true of refrigerators. With summer approaching there is hardly a gift, of the useful order, which will be more appreciated. That should appeal to some of the groom's friends. If they give him a refrigerator instead of a farewell dinner he will be better satisfied, and incidentally he may be in better condition for the ceremony.

Another Gift for Relative.

Then there are stoves. More than one stove has been given as a wedding gift—and were the young people considered, more than one stove would be given this year. In some districts ranges are the things which will be needed. Again gas stoves may be absolute necessities in the new house or flat. Gas stoves, even in this age, when, despite continual talk of the high cost of living, first-class stoves are sold at remarkably low figures, yet cost considerable money. If the groom is saved the necessity of this outlay he will start upon his new partnership in a better financial position—and that, of course, is to the advantage of the bride as well as to him. Another suitable gift for one of the groom's relations, this.

Perhaps one of the happiest events in connection with the supremely happy event of marriage, is, when the day before the ceremony there comes a note from the grumpy old Uncle to whom an invitation was hopefully sent,—a note containing a check. If the fishing is good there may be several such checks, and the hearts of the bride and groom will be glad.

Checks Not Wasted.

There is only one sure thing about these checks, and that is that they will not be wasted upon anything useless. It is the sensible things—the needful things—which they will buy. A check from the grumpy uncle might buy a refrigerator. One from a well-to-do anut might cover the cost of a stove or a vacuum cleaner. The dealers, therefore, might well prepare to supply the kind of article which will be needed. It is not enough merely to have the goods in stock. The thing necessary is to bring them so prominently forward that the bride and groom will perceive them, and will come within to buy.

The "Kitchen Shower" Custom

What it Means to the Hardware Dealer—The Opportunity thus Presented for the Sale of Aluminum Ware and Other Lines of Quality Goods—Methods of Capturing the Trade—Have a Table With All Kinds of Supplies—The Value of Window Displays.

The "kitchen shower" is one of the few customs connected with the marriage ceremony which shows man to possess a considerable degree of common sense after all. It is a development of comparatively recent date and has resulted in making the humble saucepan and the commonplace teakettle as much in demand around wedding time as more pretentious gifts.

The kitchen shower came into existence as a result of the general recognition of the fact that a young couple need useful things for every day use rather than expensive ornaments with no practical value. The average couple not so many years ago, started housekeeping with a parlor and dining-room loaded with knickknacks and a kitchen bare of all the little useful articles which make house work easy. These articles had to be acquired by degrees; probably just as each need presented itself. This system was about as practical as the method usually pursued by the Mexican who, in clothing himself, spends about $50 on a hat and fifty cents for the rest of his outfit.

Under the new system, the friends of the bride get together a short time before the wedding and supply her with all the small articles needed in housekeeping—graniteware, tinware, kettles, linen, etc. Each person contributes one article or so and between them they just about secure everything needed. A list is made up and each contributor is allotted certain articles to buy, thus preventing overlapping and the danger of omissions. This is what is known as a kitchen shower.

From the standpoint of the hardwareman the custom is a highly commendable one. Practically all the purchases are made from him and, while he sells the articles which the newly weds would afterwards have bought from him by degrees, he has the advantage of earlier sales.

Paving Way for Sales.

The kitchen shower gives the dealer dealer a splendid opportunity to pave the way for other sales. For instance, he naturally learns from his customers who the prospective bride is and when the ceremony is to be performed. Many of those who come in to buy kitchen articles will later attend the wedding, and will thus require to buy a more pretentious gift. The dealer can acquire this information also and seize the opportunity to show them some of his regular stock.

"If you haven't decided what you want to give, I would like to show you some of the latest things I have in stock," he says. "Now, how would a casserole do? Perhaps you would prefer to give a piece of brass; this fern pot is very artistic," and so on.

The young lady—it is always a young lady in such cases—may profess not to have made up her mind that early, but it is altogether likely she will pay a return visit to the store when the time for making the purchase arrives.

Selling Quality Goods.

More important still, it is a golden opportunity to press the sale of quality goods. People buying a gift for a bride, even when it is only a frying pan or a kettle, feel that they want to get the best. The dealer who takes advantage of this tendency can readily induce his customers to purchase the most lasting and serviceable ware.

"I supplied practically all the material for four or five showers last June," says one hardwareman, "and there wasn't a poor piece of goods in the lot. A great deal of it, in fact, was aluminum. I sold more aluminum during May and June than during the whole previous year."

It is, undoubtedly, a good opportunity to push the sale of aluminum ware. Show the customer how bright, light and valuable the aluminum utensils are, enlarge on how well they would look in the new home and how pleased the recipients would be; and the sale is as good as made, in most cases.

When the salesman ascertains that the article or articles desired are to be part of a kitchen shower, it is wise to assume at once that only the best quality will be considered. "You will want the very best, of course," he should say, proceeding at once to show the most attractive pieces he has in stock. It is legitimate to do this, for the customer is better pleased in the end, even if she had thought of buying something a little cheaper.

Getting the Trade.

Kitchen showers will be quite common occurrences during the month of June, and hardware dealers should make every effort to keep the trade away from the cheap novelty stores. They can do this by featuring kitchen utensils to a considerable extent. Advertising and window displays will be found effective in bringing the trade to the hardware store.

"Quality" should be the keynote of

An effective display of aluminum ware and kitchen utensils in the store of Philbin & Co., Westmount.

the hardware dealer's campaign. The kind of goods sold at the novelty stores are naturally cheap, and it is only by educating people to the wisdom of buying good quality articles that they can be restrained from going to these stores.

Have a Table.

It is a wise measure to have a table stocked with just the kind of articles needed for showers. Place it in a fairly prominent position in the store.

The chief advantage of this method is that people see articles which they had forgotten in making up their list. They promptly add them to their other purchases.

One dealer has hit upon the ingenious scheme of preparing a list of goods for kitchen showers. He has printed copies always on hand and gives them to customers to check over when they find that they are getting up a shower. They invariably find numerous items which they had omitted, and he thus makes a number of extra sales.

Clever Window Displays.

Effective window displays can be arranged with the use of kitchen ware and utensils.

In the window of Philbin & Co., Westmount, a display of aluminum ware has been shown for the past week, which Mr. Beddard, the manager of the hardware department, states has brought splendid results. Not only has it been the direct means of attracting the newlyweds, but it has also attracted many who have been buying pots and pans for years.

A careful examination of the trim, which is reproduced here, will make it very evident why the display should attract. A better arrangement could hardly be made. It has the value which comes from lavishness—there are many saucepans shown; and yet the effect is not at all confusing. Nor does the aluminum ware take all attention from the granite ware, which is shown on shelves at the side.

"The advantage of such a display is not all apparent at once," remarked Mr. Beddard, when talking about this trim with the eastern editor of Hardware and Metal. "We have sold a great many saucepans since the trim was put in, four days ago. But this will not be all. I know it won't, because I have had somewhat similar displays before. There are —let me see—there must be thirty or forty women who have been attracted by such a display in the past, and who have been buying saucepans and other kitchen ware here at intervals since. As a pot or pan wears out they come here to replace it—getting one of the style which appealed to them before, and which they tried and found satisfactory."

"I am content," remarked Mr. Beddard, "if we only sell one or two of these pots to each newly-wed. We will not make a great deal of profit that way, but I have confidence in these goods. If they are once tried other pieces will be bought."

Give the Traveler a Fair Chance

An Ex-Member of the Road Fraternity Writes of the Relations Which Should Exist Between Retailer and Traveler, Making a Strong Plea for Consideration for the Traveling Salesman.

(By an Ex-Traveler.)

Like the mother-in-law, so famous in song and story, and so many thousands of times the subject of jokes and jests, the traveling salesman is seldom appreciated by the man upon whom he calls. Too often he receives scant courtesy and little or no consideration. Often he is regarded by the retail merchants as a necessary evil—necessary because unavoidable—but always as an evil.

As a matter of fact, he ought to be regarded as a source of information, in importance second only to your trade journal. He ought to be your friend, and you ought to be his. The fact that he is looking for trade ought not to prejudice you against him, nor tempt you to retire into your shell or refuse to become intimate with him.

The order book which he carries in his hip pocket is not a revolver, nor a gatling-gun, and if he does draw it occasionally, and requests you to sign the dotted line, it won't kill you. Suppose you were to close your doors to all traveling salesmen—how much would you learn of the work of the outside world? How many profitable opportunities would you obtain? How many new and effective means of advertising would be brought to your attention?

The average traveling salesman is not half so black as he is painted. He is not a scoundrel, and he is not always planning to part you from your cash regardless of whether he can be of any benefit to you or not. As a matter of fact, he is a man who works hard for an honest living, and, when you come to make investigations, you will find that he is remarkably like yourself.

In thousands of cases he exhibits almost infinite patience, receiving your coldness and lack of interest or consideration with wonderful good nature, often in spite of the fact that he knows beyond peradventure of doubt that he is offering you a proposition of great value, and that you are turning a deaf ear, not to him only, but to your own best interests.

In many instances the traveling salesman offers you an investment that means a far greater profit to you than it does to him or to the house he represents. For it cannot be denied that the retail merchant's profits are frequently very much larger than those of the manufacturer on dollar for dollar invested.

Of course, an impertinent traveling salesman deserves no consideration at the hands of any merchant, nor does a salesman who is objectionably aggressive, but how many traveling salesmen are impertinent or objectionably aggressive? Are they not, as a matter of fact, for the most part men of courtesy, and in many instances tactful and diplomatic?

When you sell goods, you sell them under the most favorable and pleasant conditions in the world. Your customers come to you; you do not have to seek them. They come prepared to buy and with the intention of buying, or they would not have entered your store. They not only give you their immediate and undivided attention, but when you are engaged they wait your convenience, and they nearly always listen to your recommendations cheerfully and willingly. Contrast your business conditions with those of the traveling salesman. Customers never come to him; he is always seeking them; and when he finds them, their attitude is to resist his offers, whatever they may be, in consequence of which they give him scant courtesy and small consideration.

It is not unusual for a merchant to keep a traveling salesman waiting for from 15 minutes to an hour or an hour and a half before granting him an interview. Nevertheless, a traveling salesman must never be disgruntled nor anything short of smiling or urbane in his manner, no matter how much time you may have made him waste, and no matter whether he receives an order from you or not. In any event he must thank you for the courtesy of an interview and leave you with the impression that he feels that you have done him a particular favor in allowing him to talk to you at all.

A Table Well Worth Keeping

Figures Which Enable Prompt Discovery of Price at Which Goods Must be Sold to Yield a Certain Desired Profit.

Letters being receiped show that dealers are still worried over the question of figuring profits. There is little wonder that this should be so, for the problem is a vexed one. The accompanying table, however, may make the task easier to some, and may do more to explain a correct system than would many written paragraphs. A table a man can study step by step. It is considerably harder to proceed thus carefully with any written explanation.

Yet written explanations are necessary. Come to think of it an explanation of this explanatory table is necessary.

What this table enables a man to do is to decide quickly just what he must charge to obtain a certain desired profit.

Know Your Cost of Doing Business.

Every man, for instance, knows what his cost of doing business is—at least every dealer who is making the greatest possible success must know this. If ther are any who are in the dark on this fundamental point they had better get to work figuring right away.

But, as has been said, the man who is really succeeding knows what his cost of doing business is. Suppose, for the sake of illustration, that it is 18 per cent. on the sales, then to find what he must add to his delivered cost in order to get a certain profit, the dealer runs down the column at the top of which stands 18 per cent., until he reaches a figure which represents the net profit which he desires. He then follows this line along to the left, and there—at the extreme left—he sees the percentage which he must add to the delivery cost to get this desired profit.

Practical Illustration.

Supposing the article to be sold costs $10, and supposing the dealer, whose cost of doing business is 18 per cent., wants a fifteen per cent. profit. He then traces down the 18 per cent. column to the figure fifteen, traces it to the left, and finds that he must add 50 per cent. to his delivered cost to make 15 per cent. net profit—in other words he must sell the $10 article for $15.

This can be proved as follows:—Though there will be found a slight discrepancy which results from the omission of fractions.

The cost of the article to be sold is $10; but by the use of the table it has been found that the selling price is to be $15. Now the cost of doing business is figured on the sales, and therefore must be figured on that $15 and not on the $10. This amounts to $2.70. Profits also is to be figured on the selling price. Now 15 per cent. profit is wanted—that is 15 cents on every dollar for which the article sells, or 15 cents on each one of $15—in all $2.25.

What Constitutes Selling Price.

The selling price of the article, therefore—found so simply by the use of the table, is the $10 which it actually cost the dealer, plus $2.70 which it costs him to sell it, plus $2.25 which he wants as profit. A total of $14.95. The real percentage which would have to be added to the delivered cost to cover cost of doing business and yield a net profit of 15 per cent., would be slightly under 50 per cent.; but the tables do not deal with fractions. It is hardly likely, moreover, that any dealer will object to giving himself that extra 5 cents. Such is not the way with dealers—nor of any others on this old globe.

TABLE FOR FIGURING NET PROFITS

If your cost of doing business figured on sale is represented by one of these figures.		10 %	11 %	12 %	13 %	14 %	15 %	16 %	17 %	18 %	19 %	20 %	21 %	22 %	23 %	24 %	25 %
	25%	10	9	8	7	6	5	4	3	2	1	0	-1	-2	-3	-4	-5
and you mark your goods	33⅓%	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
at one of these percentages above delivered cost;	40%	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3
Your % of net profit is	50%	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8
represented by the figures	60%	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12
at the junction of the two columns.	75%	32	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17
— MEANS LOSS.	100%	40	39	38	37	36	35	34	33	32	31	30	29	28	27	26	25

☞ So as to reduce size of card, fractions have been omitted in figuring.

AFTER HANGING OF CRANE COME MANY PURCHASES.

(Concluded from page 37.)

need coat hangers, skirt hangers, and such articles, in large numbers. He will have one or two himself—perhaps half a dozen. He may be willing to share these, but they will not be sufficient. New coat hangers will almost certainly be needed, and the hardwareman who can supply these will get big returns. His profit on the sale may be infinitesimal. Perhaps he gets no profit at all, but he will have met the need of these young people, and they will naturally think of him the next time they want something. From that something wanted later on it is that the profit comes. That is one thing to be remembered about going after the trade of the Newly-wed. The immediate profits are the small consideration. Every sale is new business, and gives promise of more business to come.

Hardware Letter Box

Furniture Papers.

H. W. Reimer, Steinbach, Man.—"Kindly give me names of Canadian furniture papers."

"The Furniture Journal," Acton Publishing Co., Toronto; "The Furniture World & Undertaker," Commercial Press, McKinnon Bldg., Toronto.—Ed.

Gasoline Pressing Irons.

W. J. Heamon, Exeter, Ont.—"Kindly inform me who are the manufacturers of gasoline pressing irons."

Ideal Sad Iron Co., Cleveland, Ohio; Imperial Brass Mfg Co., Chicago; Union Heater Supply Co., Detroit; Coats & Corlett, Aurora, Ill.—Ed.

McDougall's Sheep Dip.

The Manitoba Hardware & Lumber Co., Virden, Man.—"Kindly let me know western agents for McDougall's sheep dip."

Miller, Morse Hardware Co., Winnipeg; Gordon, Mitchell Drug Co., Winnipeg.—Ed.

Magnolia Peninsular Stoves.

The Gleichen Trading Co., Gleichen, Alta.—"Can you give us name of makers of Magnolia Peninsular Stoves?"

We can give nothing definite on this, but believe they are made by the Peninsular Stove Co., Detroit.—Ed.

Building Fine Store.

Swift Current, Sask.—The Swift Current Hardware Co. are having plans drawn for a large and handsome new store.

The building will have a frontage of 115 feet on Cheadle Street, and 50 feet on Ninth Avenue, and is to be a solid brick structure of two storeys in height, with a full basement.

Complete Course in Sheet Metal Work

By L. W. KOSER

Prob. 14 is the same as Prob. 10. The only difference being that the pyramid does not go to a point.

Draw the base line A B C D of fig. 1. Then the outline P S S of fig. 2, and draw the line R R at the desired height. Bring the T square against R R, and draw the lines E H and F G of plan. Connect E and F, also H and G.

Draw a dotted line into the centre O.

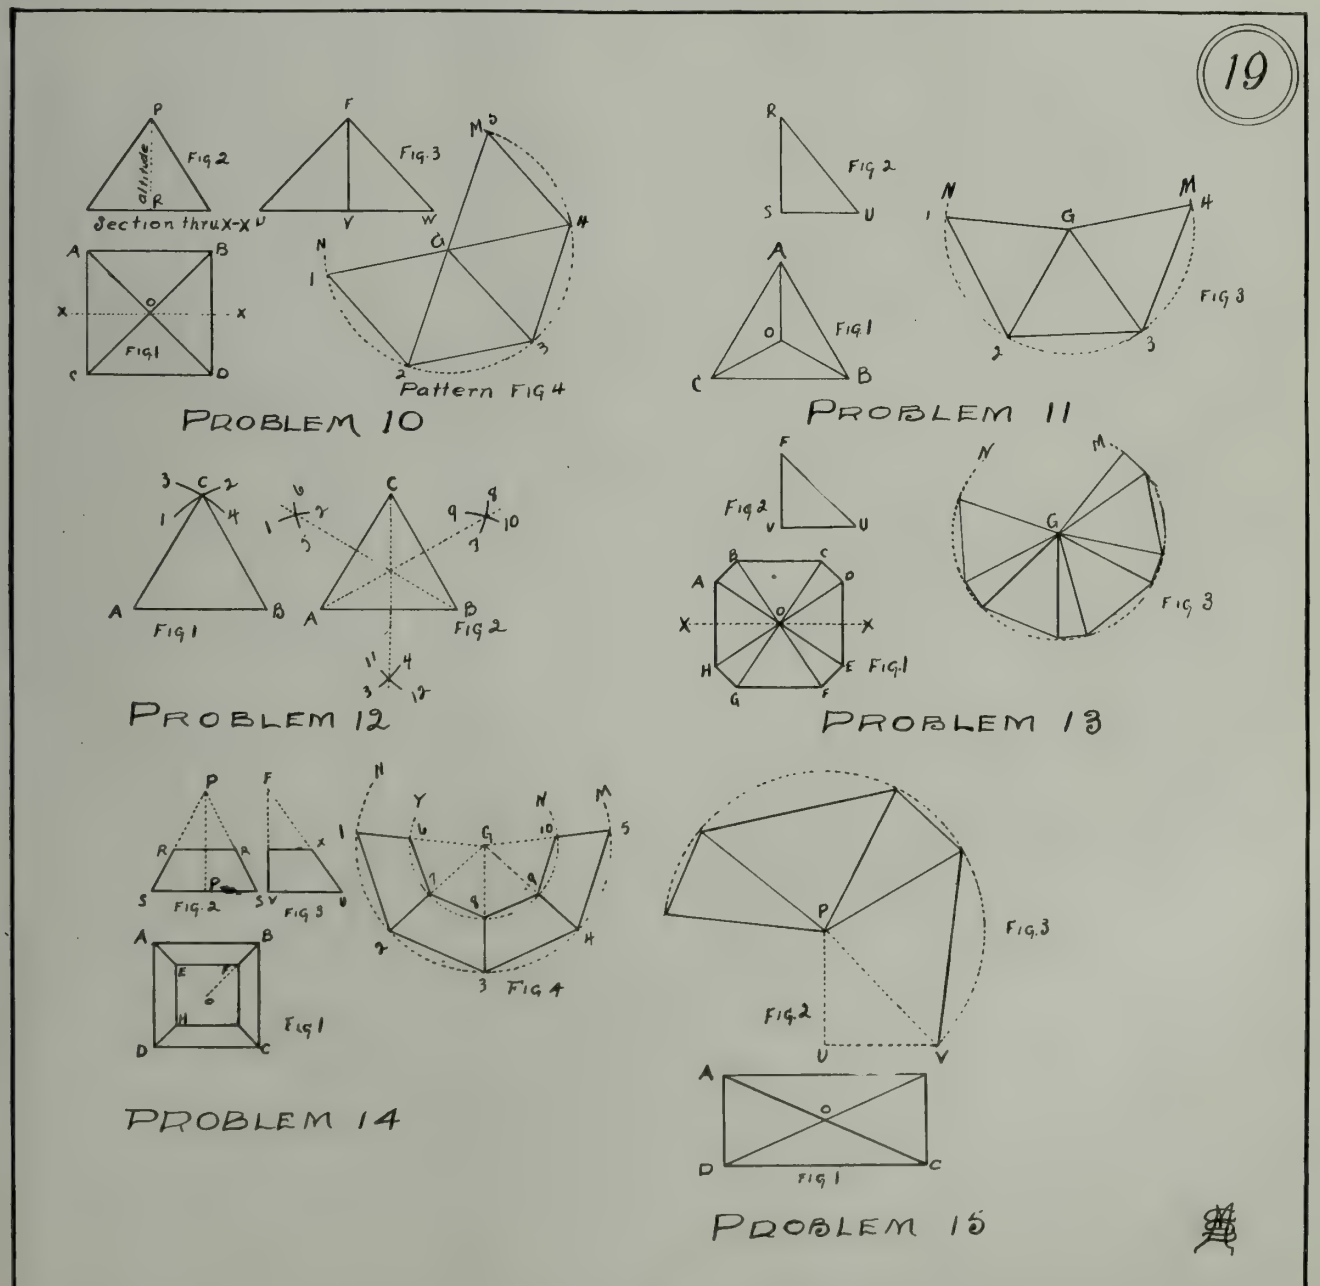
Lay out the line V U fig. 3, equal to O B. Make the line V F equal to P P of fig. 2. Draw a line from F to U. Also draw a line across from R R, thus getting the point X.

With the point of the compass at F, and the lead at U, and with any centre as G, describe the arc N M.

Then with the point at F, and the lead at X, and with G as a centre, describe the arc Y Z.

Lay off the perimeter A B C D on the arc N M. Draw straight lines connecting the points, as 1, 2, 3, 4 and 5, and draw lines into the centre G. And where these lines meet the arc Y Z connect the points with straight lines, as 6, 7, 8, 9 and 10.

Cut the pattern out as shown by the heavy lines.



Prob. 15 shows a method of developing a rectangle pyramid.

Draw the outline A B C D, fig. 1, and draw the diagonal lines into the centre O. Then lay out the line U V, fig. 2, equal to one of the diagonal lines as O B. Erect the line U P to the desired height. Then a line drawn from P to V is the required hip line.

Set the point of the compass at P, and the lead at V, and with P or any convenient point as centre, describe the arc and lay off the perimeter. Connect the points and draw lines into the centre.

In making patterns for pyramids, it is sometimes policy to make the patterns in two or more pieces, as it is practically impossible to form some of these up in one piece on the brake without mashing the opposite sides.

When seams are necessary, make them in the side of the article and not on the edges.

Progressive Hardware Retailing

How the Use of Clippings Helps to Gather in the Trade — Maritime Firms are Using Motor Trucks — A Novel Use for Window Front — How West Toronto Firm Secured Direct Results from Catalogue — Going After the Summer Trade.

USING MOTOR TRUCKS.

St. John, N. B.—The general advantages of the motor truck as a means of delivery and the idea of keeping abreast of the times and the competitor have led to the adoption of this means of conveyance by the leading hardware stores of this city, and those who have already placed auto trucks in commission are well satisfied with the results. The firm of T. McAvity & Sons, King Street, were the first to establish delivery by this means in the trade in St. John, and they have been followed by Emerson & Fisher, who have a truck somewhat similar to the first named. W. H. Thorne & Co. have placed an order for two trucks, one for light carrying, such as the former two, and the other for heavy deliveries common with hardware stores. They are due to arrive almost any day, and will be put in use at once.

Those who have trucks and have been using them say that the motor is easily the superior means of conveyance, if properly conducted. Its superiority as to quickness, its capacity, and the advertising connected with its use are weighty arguments in favor of having the motor for delivery about the store. The largest truck in the city at present is that owned by the Maritime Nail Co., which has attracted much attention owing to its size and the heavy load it can carry.

A NOVEL USE FOR WINDOW FRONT.

Montreal, May 30.—A window, most trimmers will agree, has four surfaces which may regularly be used to secure the desired effect. The top of the window may occasionally be employed, but more often the floor, the two sides, and the back of the window are all that is available. Now comes a scheme, however, by which the window's six boundaries may be used—by which the glass itself plays an important part.

The novel arrangement is to be seen in R. & W. Kerr's St. Catherine Street store, where one window is given over to goods wanted by anglers. Things are not hung from the plate glass, of course, but this is used to give the effect of a stream, through which people have to peer, to observe the goods shown within.

The effect is secured by the clever use of a paint brush. Blue streaks are drawn upon the glass, at such intervals and in such a way as to give the appearance of a brook, in which painted trout rise to nibble painted flies dangling from painted lines. The general appearance is most unique. People simply have to pause to examine what they see. They look into the window, and then, through the sketch on the glass front, they observe a display of rods, flies, fly hooks, bait cans, baskets, reels—all the necessities of the angler.

ADVERTISING PAINT.

Dunnville, Ont.—Congdon & Marshall, hardware dealers, are using considerable space in advertising paint. A very effective advertisement was used this week, including references to many different varieties of paint, including carriage, implement and floor paint, bath tub enamel and bronze for gas and water pipes. Illustrations were effectively used.

DEPARTMENT STORE "SPLURGE."

Toronto.—Practically every window in the T. Eaton Co. store this week was devoted to displays of wedding presents. In all, about fifteen windows, all of unusual size, were used in this way, and the variety of goods shown was indeed wide.

The "splurge" on the part of the big departmental store is significant of the belief held in the possibilities of the wedding present trade. It is also in the nature of an indication that the time has come to feature the lines which sell to gift-hunters. Hardwaremen should not hesitate to follow the example.

DIRECT RESULTS TRACED.

West Toronto.—It was stated some time ago that May Bros., hardware dealers, had issued a spring retail catalogue. They have had splendid results and intend to make the catalogue a regular yearly feature. The goods advertised in this way have had a large sale and it has not been difficult to trace direct results to the catalogue. In a large number of cases, people have brought the printed matter into the store and have pointed out the article they want or have referred to it in making a purchase.

The method pursued by May Bros. was to send the catalogues around to every house in their district. In this way the distribution was made more thorough and less expensive than if a mailing list had been drafted up.

WHERE CLIPPINGS ARE VALUABLE.

Those who read an article which appeared in the Saturday Evening Post some weeks ago, explaining the rise of a Hardware Clerk, will remember that this clerk—when he had attained a position where he could not make suggestions to his employer—proposed the adoption of a system which would enable the store to get in touch with the newly-weds. He carried this exceedingly far—even sending a present to each bride from the establishment.

There may be some doubt as to the feasibility or advisability of such a course, but few will deny that it is wise to get to know the new arrivals in the neighborhood, especially as these are the very ones who will likely find it necessary to buy largely.

A Montreal piano firm—though doubtless it has not a monopoly of this scheme—has started a regular press clipping department. The announcement of an engagement, which mentions the name of a Montrealer, is clipped; and if it is the girl who lives in the Royal City, her father is seen, and the suggestion made that he buy her a ——— piano as a wedding present.

If the man is the resident of Montreal he is seen, and prices for the ——— piano are quoted.

Announcements of the marriage are also clipped, and the bride is called upon at her new home. If she has yet to secure a piano there is a good likelihood that the purchase will be made from this progressive concern. As an illustration of the good results obtained it is only necessary to cite the case of one salesman, who last year sold pianos to fifty nine brides.

Such a scheme might well be adopted by hardwaremen. They might write to the prospective husband before the wedding, suggesting that he could get his stove, refrigerator, and kitchen accesories from them.

Current News of Hardware Trade

Have Enlarged Store.

Champion, Alta.—The Watson Hardware Co. have enlarged their store.

Hamilton Dealer Dies.

Hamilton, Ont.—The death occurred here of Thomas Appleton, hardware and clothing dealer.

To Establish Factory.

The Clark Blade & Razor Co., of Newark, N. J., are said to be negotiating for a site for a Canadian factory.

Appointed Agents.

Montreal.—Henderson & Richardson have been appointed agents for the Morgan Motor Truck Company, of Worcester, Mass., the oldest builders of motor trucks in America.

To Erecet New Building.

Watrous, Sask.—R. J. Nesbitt, of the hardware firm of Nesbitt & Warren, has let the contract for a new two-storey building.

Move to Larger Premises.

Trenton, Ontario.—Bailey & Reynolds have moved to larger premises. As they have only been in business a little over a year, this speaks well for the new firm. They are always on the lookout for new lines to handle.

To Erect New Building.

G. A. Weinge, who has been with Thomas Bryan, Limited, London, brush manufacturers, has resigned to engage in the bicycle and motorcycle business on Clarence Street, London. He has secured a number of agencies in those lines. Mr. Weinge is well known to the trade from London west to Windsor.

Secure New Store.

The Smith Hardware Co., Montreal, have just purchased a five-storey building, situated at 43 and 45 St. Maurice Street. The present lease does not expire until April 1st next, but the Smith Hardware Co. will move in then. The new building will afford the extra room which is so badly needed.

J. C. Malcolmson Dead.

Toronto.—Mr. John C. Malcolmson of Rusholme Road, who died on Thursday at his home, was seventy-two years of age. He was born in the Orkney Islands and came to Canada when a boy with his parents, settling in Hamilton. Twenty years ago he became one of the promoters of the Diamond Glass Company of this city, and was actively connected with the company until six years ago, when he retired.

Buck Traveling Staff.

The Wm. Buck Stove Co., Brantford, will be represented on the road by the following staff this year: Ontario—Geo. J. Bray, Colin Munro, Edward E. Orr. Quebec and Maritime Provinces—Geo. E. Foster, R. Lapierre, A. L. Telfer. Manitoba and the West—A. M. McMahon, H. E. Coates, M. A. Schaffner, A. J. Richardson, W. B. Sword, E. F. Whellams. British Columbia—D. H. Currie and A. L. Teetzel.

Leaving for the West.

Amherst, N. S.—Harry F. Black, for twenty-one years connected with the hardware firm of Dunlop Bros. & Co. —first as clerk, but later as shareholder and vice-president—has found it necessary to leave for the West, on account of the impaired health of one of his family. He is shortly to take an important position with J. H. Ashdown, Limited, Winnipeg.

During his years in Amherst, Mr. Black has gained the regard of hundreds, and before leaving he was made presentations by his firm, by the Library Board, by his fellow-members on the Trustee Board of Trinity Methodist Church, and by the members of his Bible class. Mrs. Black was also the recipient of many gifts.

Factory Enlargements.

Winnipeg.—C. C. Ballantyne, vice-president and managing director of the Sherwin-Williams Co. of Canada, is here. He states that it has been decided to enlarge both the warehouse and factory of the company here.

Toronto.—The Metallic Roofing Co. are building a large addition to their factory, 50 by 100 feet, 3 storeys high. It is expected that it will be ready for occupation by July.

New Retail Stores.

Vanguard, Sask.—F. H. Claypole has started a hardware and implement store here.

Treherne, Man.—J. P. Straube is arranging his stock preparatory to opening a new hardware store here. He is being assisted by three men from wholesale houses.

Fire Losses.

Halifax, N. S.—A fire in the hardware store of James Simmonds & Co., Dartmouth, badly damaged the building and the stock on the ground floor. The fire was checked fortunately before gaining serious headway.

Montreal.—Fire did $4,000 damage to the hardware store of Auguste Couillard, Regd., 233 St. Paul Street, last night. The outbreak started in a barrel of rubbish at the rear of the building, and spread through the windows of the second storey. The proprietor of an adjoining cigar store was the first to notice the fire at the rear of the hardware store.

Personal Notes.

Fred. W. Sumner, president of the Sumner Company, Moncton, N. B., has, his many friends will be glad to know, recovered from his recent indisposition. He will take a trip to Europe this summer.

E. Holt Gurney, of the Gurney Fdry. Co., Toronto, is on a three months' trip to Europe.

Picton, Ont.—W. J. Carter has been taking a week off, camping on the Bay of Quinte. He has been working exceptionally hard lately and needed the holiday.

Earl Grey, Sask.—A. B. Cruickshank, of the hardware firm of Cruickshank & McPhee, has returned from a trip to Regina.

Montreal.—T. M. Richards, of Edmunston, N. B., passed through Montreal on Monday, May 27. He went west about two months ago on crutches, but the baths at Mount Clemens completely restored his former health. He speaks warmly of the Canadian west, also of Chicago, Buffalo, and other American cities, which he visited on the way east.

Business Changes.

Duck Lake, Sask.—R. W. Pozer and Joseph B. Clearihue have bought the store and hardware business of Milton Stephens. They intend to materially extend the business.

Camrose, Alta.—H. W. Storey, hardware dealer, has decided to leave this place and is selling out his entire hardware stock.

Elgin, Man.—A. Robitaille, of Winnipeg, has purchased the implement deparement of Hannah & Sons, hardware and implement dealers.

Trail, B. C.—The Trail Hardware Co. are selling out.

Arthur, Ont.—W. Moore & Son, hardware dealers, have sold out.

Three Hills, Alta.—C. H. Conrad, dealer in hardware, has sold his business.

North Vancouver.—Patterson, Goldie & Clark, dealers in hardware and stoves, have dissolved partnership. Patterson & Goldie are to continue the business.

Weekly Market Report --- Metals

METAL NOTES.

Markets are active.

Prices remain firm.

An advance is predicted in copper.

Spelter is now reported to be plentiful.

Tin performs some startling price gymnastics.

MONTREAL.

Montreal, May 30. — Tuesday tin jumped about £5 on the primary market. Wednesday there was a £7 drop—that is a quick-change-act even for tin, but one which is not hard to understand under present circumstances. To-day is the Banca sale, when some 2,700 tons are to be put upon the market. The drop of yesterday, almost beyond a doubt, was brought about by those who are desirous of buying in the Banca tin.

This is an interesting time in the tin market. What is the future to bring? A day or two more and that will be more apparent, but that there will be any real drop in prices seems something which is not to be expected.

Copper to Go Higher.

Practically all metals are strong at the present time. Copper has been advancing rapidly on the foreign markets, and the handlers here will shortly be compelled to raise their prices to the purchaser of fair sized lots. Twenty cent lead for the fair sized buyer is regarded as something which will come and come quite speedily.

Supplies are good at the present time —with the one exception of lead, which is exceedingly scarce. The position here is rendered more serious by reason of the dockers' strike in London. Some of the shimpents upon which manufacturers are dependent are coming from there. If anything interferes with the shipments the situation will be serious indeed.

Tin, coming from Liverpool, is not as likely to be interfered with by reason of the strike. Indeed, there is a good amount of this metal on hand at the present time. A shortage does not seem likely.

Bars and Sheets to Rise.

Copper.—The supplies locally are not reduced. But buyers are having to pay a high price. On Wednesday copper advanced again. Why those who sell to the smaller purchasers are not advancing immediately is a little hard to understand. But the advance will come next week. There is good reason for making this statement. Not only will there be an advance of probably half a cent a pound upon ingot copper, but bars and sheets and tubing will probably rise a cent or more. The whole trend of this market is upward, and handlers are predicting that before long there will be a general advance of two cents or even more.

Tin.—It was expected that the approach of the Banca sale would see a low market. Instead the metal advanced by bounds during the early days of the week, but on Wednesday there came a drop. The higher figures are likely to come to the front again within a day or two, however. Supplies are good, which is exceedingly fortunate since the demand is large.

Strike May Mean Scarcity.

Spelter.—This metal, once scarce in Montreal, is now plentiful. The demand continues large.

Lead.—Here the dockers' strike is of great importance. There is a scarcity locally. Users are depending upon English shipments. Let anything interfere with these and the position will be serious. It is not thought likely, however, that the strike will be of long duration, so an advance—necessitated by the low supplies—may be averted.

Pig Iron.—Prices continue high, but in spite of this the demand is large. Iron pipe and soil pipe—in which much iron is used—are greatly needed. Therefore there is a heavy demand for the pig.

TORONTO.

Toronto, May 31.—The situation in metals is marked by a distinctly active demand and a firm tone as regards prices. All metals are firm, and conditions existing seem to presage advances. Tin and copper are particularly strong, and it is stated that both metals may go to higher figures than the high prices now quoted.

There is more metal in sight on the local market than for some time past. Spelter is more plentiful and no difficulty is being experienced in getting supplies in all lines to meet the almost extraordinarily active demand.

Tin Remains the Same.

Tin.—The price of tin has performed some startling acrobatic stunts on the London market, but the price here has not varied. There is a good demand experienced.

It is deemed certain locally that tin will continue high. No one seems to anticipate a slump, despite the fact that the metal is now selling at an almost unprecedentedly high figure.

Copper.—This metal looks to be billed for an advance before long. Local meb who predict this base their opinions on the improved consumption. In this respect, it is interesting to note the following despatch from New York:

"The feature of the movement is the large export shipments that have been cleared during the last few days. On Friday exports of 5,030 tons were reported and another 4,608 tons to-day, making a total for the month to date of 27,450 tons. Quite a lot of copper that has been tied up in Baltimore by the strike has been shipped these last few days which partly explains the sudden jump in the exports.

"We published an estimate in our last issue that the producers' statistics for May would show exports of 65,000,000 pounds and it seems now as though this figure would be exceeded, and a decrease in the visible stocks is now almost a foregone conclusion."

Lead.—It is understood that lead is becoming a little scarce again, although the situation has not aroused any anxiety locally as yet. Demand is good and no difficulty has yet been experienced in filling all orders. The buying being done is mostly for immediate needs of customers.

Spelter.—The market is rather quiet. There is now plenty of spelter in sight and all anxiety on that score has been removed. The price is firm.

Plates and Sheets.—There is a splendid demand and the stocks on hand seem sufficient to meet all requirements.

WINNIPEG

Winnipeg, May 28.—There is little new to report in the metal situation here. Further advances in lead are looked for, but with a more settled industrial condition at sources of production this does not seem probable.

There has been a fair trade here in sheet metals, but corrugated iron for roofing, etc., is not popular with the civic authorities, and may be prohibited within the city first class fire limits.

Metallic ceilings are growing in popularity, and will be used in the interior finish of many commercial buildings this year.

The market here is so far from all sources of supply that it simply follows the Eastern lead and in all lines Eastern quotations plus freight rates hold. Under these circumstances, much interest is taken in the work of the railroad commission, now engaged in the work of investigating freight rates, especially with reference to the West.

Weekly Market Report --- Hardware

CONDITIONS IMPROVED

The better weather conditions have brought about a corresponding improvement in trade in hardware lines. The wholesalers are now being pretty well rushed to meet the demand. Trade is distributed pretty evenly over all branches. No price changes of any importance are reported this week.

MONTREAL.

Montreal, May 30.—At long and at last the really warm weather has come. No more is there any reason for people holding back in their buying. Nor are they holding back. The business during the past few days have been very large—much larger than for some time past.

Perhaps the sporting goods trade has been stimulated most by the warmer weather. But garden tools, also, and garden furniture have sold rapidly of late. Then there are the regular spring lines, the garden hose, sprinklers and similar articles. The demand for these has grown tremendously in the last week. Indeed some of the articles are out of stock at the present time, so insistent has been the demand. The call, it is stated, has been much heavier than it was a year ago, and this in spite of the somewhat unseasonable weather which has obtained for weeks.

Builders' Hardware, at the moment, presents an interesting study. In the States prices have been advanced ten per cent. as is natural in view of the rapid advance in brass and copper. But here in Canada there has not yet been any upward revision of prices. There are those who predict this is coming. A week or more ago it seemed a higher price level must be struck, but now there seems a possibility that the higher prices will not be set for some weeks—perhaps, indeed, they will not be set at all. Competition of course is making the low price necessary.

Household Goods.—For screen doors, washing machines, refrigerators and all kitchen goods there is a big demand just now. Enamelware, graniteware and aluminum goods are especially wanted—partially by those who are just starting housekeeping, and by those who are moving. For step ladders and housecleaning goods, too, there is a good call.

Builders' Hardware.—As has been said the prices here are not at all certain to advance—in spite of recent predictions. Where competition interferes with market conditions the result is hard to predict. Copper rivets and brass goods, generally, however, show an upward tendency. It is not long since they did rise in price, and apparently it may not be long before they advance again.

Harvesters' Tools.—Here the heat has brought splendid results. Gardens are beginning to show the result of the early work put upon them, and hoes, rakes, and similar tools are wanted The demand upon the wholesale houses for this class of goods has been exceedingly gratifying.

Garden Furniture.—Swings, seats and awnings are being ordered daily. More and more people are coming to appreciate the value of the out of doors. Those who have only a little plot of ground, even, are yet utilizing it more than in the past.

Sporting Goods.—The warm weather has induced more people to go to their summer homes. They need paddles for their canoes, oars for their boats, rope for sail stays, parts for their motor boats. All this means business to dealers handling such sporting lines. Then the exodus means a demand for fishing tackle, and a rush for golf clubs, tennis rackets, balls, baseball bats and gloves. Every kind of sport is booming now, and supplies are needed. Bicycles, too, continue to sell. There has been a revival here, which seems to spell a steady growth in the bicycle trade. Motor cycles too, are becoming more and more popular.

TORONTO.

Toronto, May 31.—The improvement in the weather in the early part of the week brought an immediate and marked improvement in trade conditions. Lines which had been selling slowly on account of the cold and rain jumped immediately to the front and orders began to pour in.

Although the jobbers had not been complaining on the score of business previously, they were clearly delighted when the weather changed. They stated that the volume of general business has improved since to quite a degree.

Although the weather during the month of May was uniformly bad, it is believed that it will be found that trade showed an increase over last year. May, 1911, was a record breaker at that.

Seasonable Goods.—The demand for warm weather goods has not come to an end by any means. Call for garden tools has been steadily maintained and good sorting orders are pouring in. Lawn mowers are in special demand. There is also a steady call for awnings, window netting, verandah shades, hammocks and ice cream freezers. The refrigerator trade is getting busier all the time and jobbers are begging to wonder how long the supply will keep up with the demand. Refrigerator orders are breaking all records.

Household Goods.—The demand for all lines of household goods is pronounced. Jobbers assert that they are moving heavy lines of enamelware and tinware. The more expensive lines, such as carpet-sweepers and vacuum cleaners, are also in sharp demand. It was probable that the number of "kitchen showers" has helped to make the call for kitchen utensils so heavy.

Builders' Hardware.—It is now said that advances may come after all in certain lines of builders' hardware as a result of the recent increases in copper and brass. There is nothing definite to report, however, as the matter has not passed the conjectural stage. The wholesalers do not seem to anticipate any immediate change at any rate. The demand for builders' hardware is heavy.

Heavy Hardware.—Barb wire is moving well and there is a heavy call for other goods, including wire fencing, chain, rope, pulleys, nails, bolts, nuts and screws. The prospects are that there will be a very brisk year in all these lines.

Sporting Goods.—The warmer weather has created a more marked improvement in the sale of sporting goods than perhaps in any other line. The average sportsman seems to require a bright sky and summer warmth before he begins to take an interest in things and quite a few dealers apparently are the same way. However, business is humming now in all branches of sporting goods.

WINNIPEG

Winnipeg, May 28.—Hardware business in sympathy with all other lines has has suffered a slight setback on account of the prolonged spell of wet, cool weather that has prevailed during the greater part of May. Wholesalers generally, however, consider business conditions excellent and report fall orders as coming in freely.

Trade in barb wire is now brisk and likely to be an important feature during the next month or six weeks.

Sporting goods and camping outfits are now moving freely and there is a free movement of gardening tools and kindred lines. Screens and mosquito netting are also moving freely.

The feature of spring business so far, however, has been in builders' hardware, for which there has been an unprecedented demand and which has before it possibilities of record business.

Stoves, Furnaces and Accessories

Installed Price What People Want

They Do Not Like to Have the Cost of a Stove Mentioned as a Certain Number of Dollars, and Then Find That They Will Have to Pay More to Have it Placed in Their Kitchen—Wisdom in Meeting the People's Wish.

Possibly because there have been so many tricksters trying to dupe the unsuspecting, people have come to be exceedingly suspicious of a cost that is not mentioned. Tell a man that he can have some land for nothing—merely upon payment of the outstanding taxes—and he at once becomes suspicious that the taxes will come pretty high. Mention a low price for a stove, and add that there will be a small additional charge for installing, and at once the customer becomes uneasy. Probably he does not doubt the honesty of the dealer. He does not think he will be charged more than is right. But he does not like to buy without knowing what the complete cost of the stove will be. He objects to taking a leap in the dark. In purchases, at least, this generation wishes to see its way.

All Ask About Installation.

John Watson, of Westmount, who has just commenced handling gas stoves, has come face to face with this peculiarity of purchasers—if peculiarity it may properly be called.

"I have had a number of people in here who were quite satisfied with the price quoted," said Mr. Watson, "but in every case they would ask, 'Does that cover the installation of the stove?'

"When I said 'no,' they were plainly displeased. I might say, as I did, that the cost of installing would be only a dollar or two. This did not seem to give satisfaction. The people, I have found, want something definite. They are not content to merely know the price of the stove and to pay whatever is proper for installation. They tell me they want the whole thing lumped together."

Want Only One Transaction.

Other dealers have found much such a state of affairs as Mr. Watson reports. A few believe that their customers are fearful lest the cost of installing will be exorbitant. But more seem to be of the opinion that it is the purchaser's desire to have the whole business completed in one transaction, which prompts him to ask for an installed price. They are anxious to know what the stove is going to cost altogether, and do not want to do a sum in addition to discover this.

"I have determined," commented Mr. Watson, "that it is better to set a figure upon all my stoves which will cover the cost of installing. Of course there is a difficulty here. It costs more to install some stoves than it does others. Much depends upon where the main is situated. But I have found that it is possible to strike a pretty fair average.

Let a Part of Profit Go.

"Really, though, I have not added anything to the price of the stove. I find that the installation only costs about $1.50 or $2.00, and I let that much profit go. I mark the price plainly upon the stoves, and when a prospector asks, 'Will that price cover the cost of installing?' I say yes.

"That statement seems to carry a tremendous amount of weight, somehow. I know it has helped me make a number of sales. I am so convinced of this that I am now putting the word 'INSTALLED,' under the price, which I show plainly on every stove."

There can be no doubt that people in all parts of the country do like to know at the outset what the entire cost of a stove is going to be. This being so, it is the part of wisdom for the dealer to meet the people's wish. There is little use holding out. It is better to sell three stoves at a certain price, installed, than to sell one stove at the same price, and get a little additional money for the work of installing. And it has about come to this. Customers in Montreal, at least, are demanding an installed price. Those dealers who are giving this—and most of them are—are getting the best trade.

Exodus Causes Trouble.

At present those handling gas stoves are facing another difficulty—a difficulty which grows out of the exodus which is being made from the cities. "I have had several men in here examining various patterns," remarked one dealer. "They brought their wives, and I regarded the stove as well nigh sold. But the men tell me now that their families are soon moving away for the summer, and that they will not buy until the fall."

This sort of thing is certainly discouraging, yet it does not mean a sale lost, if the word of the dealers is any criterion. "I have people like that every year," remarked a Montreal dealer who sells largely. "Of course there are some who forget to come back, but a surprising number do come after the stove in the fall.

Urges Immediate Sale.

"All the same," remarked this man, "I consider it better to take no chances, and to clinch the sale at once. I try to point out that it will be pleasant to have the stove all installed when the return is made. I point out—not too insistently, but still in a manner which will bring the fact home to the prospective purchaser—that there will be hot days between now and the day his family leaves, and that the gas stove installed immediately would mean great comfort. Often I secure the immediate order in this way, and I always make it a point to see that that particular stove is installed without any delay whatever."

TO GIVE DAILY SERVICE.

Kingston, May 28th. — Wholesale hardware men, in conjunction with other wholesale men and members of the board of trade, have succeeded in getting the Kingston and Pembroke Railway to give a daily freight service between Kingston and Renfrew, and as a result, a long felt want is to be filled.

The matter was taken up by the whole section of the board of trade, and W. R. Baker, vice-president and general manager of the K. & P. Railway, was reached, through the local acting superintendent, F. Conway. The new service will be commenced on June 3, and as a result, all the wholesale dealers are well pleased.

FIRM NAME CHANGED.

The firm name of the Down Draft Furnace Co., Galt, has been changed tc "The Galt Stove and Furnace Co., Limited."

HAVE MOVED OFFICE.

The Consumers Cordage Co., have moved their Toronto office from 22 Church street, to 9 Church street.

The Passing of the Inferior Refrigerator

Manufacturers are Stopping the Production of Very Cheap Lines—They are Doing This for Two Reasons: First, the Cheap Models Yield Little Profit; Second, There is But Small Demand for Them—People Want Good Goods.

Cold as the spring has been, there has yet been felt a heavy call for refrigerators—those preserving chests which many use the year through, and which are well nigh necessities during the summer months. Only those with deep, cool cellars can afford to do without refrigerators, and it is doubtful if even these fortunate ones would not benefit by the installation of an ice chest in their kitchen. Indeed, things have reached such a state that a great number of those who have cool cellars are yet using refrigerators. They find these keep the food better, and having the supplies so near at hand saves the housewife many weary steps.

Energy Worth Conserving.

In these days when talk of conservation is being heard on every hand, the idea is beginning to percolate through even the thickest head that energy is even more worthy of conservation than is timber or coal. Energy, according to Physics, cannot be destroyed; but none will deny that it may be foolishly expended, and the amount that has been wasted in needless trips to the cellar would be hard to estimate.

A refrigerator in the kitchen saves a tremendous percentage of these tramps downstairs. It also saves a great deal of time, and time saved this way means time that can be applied elsewhere.

The knowledge of these things has doubtless done much to create the large demand for refrigerators which is now being felt, but there is another phase to the present situation which is perhaps harder to explain. The demand at present is for high class refrigerators. The exceedingly cheap lines are practically uncalled for. Indeed they are not to be had, should they be called for, the manufacturers having pretty well given over the production of these.

What Influences the Maker.

When a manufacturer gives up the production of any article, one of two things is usually true: Either he is not making money out of that article, owing to the high cost of manufacture; or he is not making money out of it, owing to the falling off in demand.

In the case of the refrigerators, it seems that the change which is now noted is attributable partially to both causes. The manufacturers were not making any great profit out of the cheap lines of ice boxes, and were therefore only too glad to note that people seemed to favor the better class of refrigerators.

Said one manufacturer: "There is a good deal said to-day about the high cost of living. We might well think a little more about the high grade of living. People are demanding better things, and naturally are having to pay a little more for them. To get more you usually have to pay more.

Want Service, Not Saving.

"A few years ago it was a cheap refrigerator which was sought. Our orders from the retailers used to show that this was so. Now our orders indicate that the people want a good refrigerator, and that they do not so much care about a few extra dollars added to the cost, if those extra dollars mean something in the refrigerator which will be of advantage to them."

"No," continued this manufacturer. "The people to-day want a refrigerator which we can assure them will keep food sweet—a refrigerator which will not leak—a refrigerator which will be easy to clean. We cannot possibly guarantee all that in the cheapest models, so we have decided to drop them. There was not a great deal of money in these cheap lines, anyway. Turning out a refrigerator—even if it is a cheap one—we have to make it serviceable; not as perfect as the better models, but still serviceable. That means investing money, and when only a low price can be charged there is not much profit."

Such is the opinion of a manufacturer on the present refrigerator situation. The word of a retailer who sells many iceboxes during the year is also well worth hearing.

Won't Carry Cheap Models.

"I have given up carrying the really cheap refrigerators at all," said this man. "There are good low price refrigerators which I do handle, but the cheap refrigerator—the refrigerator in which everything possible is sacrificed to price—those I will not carry. I would reap a small profit by their sale and a large loss. I cannot recommend the article. In many cases it will give satisfaction, but in many other cases it will not. Through selling an article which I am not certain of, I run the risk of losing the return visits of my customers, and it is from return visits that I make the big profits. If I can get only $200 worth of first orders during a year, but if each customer whose first purchase helped to make that $200 continues to do business with me, I will get a good many thousand dollars' worth of new business within the twelve months. I cannot afford to sell shoddy refrigerators, or shoddy anthing else. I don't see how any other dealers can either—providing they are expecting to remain in business year after year.".

There is a great deal in the remark of this retailer. But he has still more to say when talking along this line:

A Sample Sale.

"People don't want particularly cheap goods, anyway," he remarked. "I'll just give you a sample of the kind of conversations I have with some of my customers. Last week it was that a man came in with his wife. She asked for a refrigerator, and I began showing models, trying to find out as I went what price they would be willing to pay. Then the man spoke up. 'I guess you know about what to show us,' he said. 'We don't intend to sit in the kitchen, you know, and don't want a refrigerator with a finish which would look well in a drawing room. But we want a good serviceable article—an article that will last, and that will make food last.'

"Well, it isn't hard to sell to people like that, and that is the way I find most people are nowadays. We don't have to work overtime to secure the sale of a high price article. What we do have to do, though, is to show that the high price means a high grade of service. As a general rule, it is high service that is wanted. Of course, there are price limits beyond which people will not go, but really good refrigerators can be supplied at that price. It is really good refrigerators that the people want, and it does not pay any dealer to sell any other kind."

HE DIDN'T ADVERTISE.

A hardware merchant went home to supper one night and a new silver percolator was on the table. He asked his wife where she got it, and she said:

"Why, I dear, I selected it out of Smith's catalogue, and it only cost me $4.50 and the express."

The husband was mad in a moment, and remarked:

"Why in the deuce didn't you tell me you wanted the thing. I have lots of them in my store and they only cost me $3."

Then his wife handed him this: "Well, John, if you would advertise once in a while so the people would know you were still in business, maybe the people wouldn't send away for so much stuff."

Weekly Market Report---Stoves

GAS STOVES IN DEMAND.

The feature of the stove market just at present seems to be the large proportions to which the demand for gas stoves has attained. Reports from all parts of the Dominion agree that there has been an unprecedented sale of gas stoves The trade now seems to be at its highest point.

There has also been a good call for the smaller varieties of stoves used in summer cottages. The exodus to the summer resorts has caused a steady call for oil and gasoline stoves.

MONTREAL.

Montreal, May 30.—There is no summer quiet shown in the stove trade. The hot weather, indeed, has had the effect of making ordering heavier than before. Not only are gas stoves more in demand, but there is a great call for gasoline and oil stoves. Refrigerators too are wanted, and wanted urgently.

Prices, strangely enough, have not advanced. Metals of all kinds are soaring. Tin has reached higher figures than for months past. Copper continues to advance, and iron is scarce and high in price. Yet there have been no further advances in copper and tinware. Both were raised in price a month or a little more ago, and the manufacturers are evidently hoping that they will be able to get along without making another advance.

Heat is Helping Trade.

Orders are not restricted to any district. A good deal of tinware has been shipped by boat to the lower townships, but from the west too orders are coming.

Spring Goods.—Perhaps the most prominent line at the moment is refrigerators. The hot weather of the past few days has done a great deal to stir up the retail demand. Dealers have sold out their stock, and have been sending in hurry up orders for a fresh supply. The fact that higher priced refrigerators than usual are on the market this season is not having any harmful effect upon ordering. The people seem willing to pay a good price for a good article.

Graniteware and tinware too are much wanted. The new kitchens have to be furnished, and the sale of the kitchen utensils is consequently large.

Gas Stoves.—Here too the hot weather has had a benefical influence on trade. Some who have felt they could get along without a gas stove have come to the conclusion that they would be foolish to try this. The enervating effect of heat has already been felt slightly, and people are ready to make an expenditure which will render them more or less immune to that feeling of debility which red hot kitchens give.

Coal oil and gasoline stoves are in large demand just now. In homes where gas is not, these stoves may be installed. Then they can be taken to the summer home, the kitchen of which can thus be kept fairly cool even in the intensely warm weather.

Ranges, Heaters and Furnaces.—For immediate use ranges are only being bought in those places where there is no gas. Even in such localities the coal oil and gasoline stove is exceedingly popular—which means that there too orders for ranges are delayed. But in spite of this at the present time ranges are being sold, and all things point to a heavy trade in the fall. Merchants who make it a point to keep stoves on their floors the year through—that they may have a chance to talk stoves to customers who come in for other things—predict that the demand will be large. Strength is lent to their predictions by the fact that they are themselves placing good sized orders.

Furnaces are being installed in many new buildings, so that it can not be said this department is inactive. The great work, here, however, is in preparing for the rush trade which is expected when fall draws near.

TORONTO.

Toronto, May 30.—The stove market has been featured by the extremely heavy demand for gas stoves. Manufacturers state that they are finding no small difficulty in filling their orders, so heavy has the demand become.

Since early spring there has been a most persistent call for gas stoves. The trade has now reached the climax. It is stated that business in these lines has shown a most marked gain over last year, the biggest gain in the history of the industry.

There is also at the present time a heavy demand for oil and gasoline stoves for use at summer homes. The yearly exodus to the summer resorts is now in full swing and most of the people are investing in a stove of some kind to take along for cooling and heating purposes. Oil stoves are mostly in demand but there is also a larger call than ever for gasoline stoves. The manufacturers report a healthy increase in all these lines.

However, business is not restricted to summer stoves by any means. Dealers are showing more of a tendency than ever before to place their orders for the fall stove trade well in advance. The travelers have little difficulty in getting dealers to draft up their requirements. Earlier shipments are being specified in many cases.

The travelers also report that the retailers seem to be anticipating a very brisk fall trade. The last two years seem to have convinced them that the demand is growing continually and that increases in trade are assured. The result is that requirements for the present fall trade are being estimated with liberal confidence.

Ranges.—There is quite a good demand for ranges at the present time. While deliveries are not what might be termed heavy, there is a steady outward movement to all parts of the province.

Heaters.—The demand is still pretty small in this line. Fall booking has started, however.

Furnaces.—Activity prevails in this line and large orders are being placed. Building operations have proceeded rapidly this spring, despite the handicap of backward weather and this has created plenty of work for the furnacemen. It is expected that a considerable degree of activity will be maintained right through the summer.

Heating Accessories.—There is a good demand for all heating accessories at the present moment.

WINNIPEG.

Winnipeg, May 28.—With the opening of spring and the usual exodus at this time of the year to summer cottages and bungalows, has come a phenomenal demand for gas and oil stoves. So brisk was the trade the retailers were practically sold out and for a few days gas ranges were unobtainable.

At the same time there has been a very fair demand for the heavier class of cooking ranges and, taken all around, the stove business here has been flourishing.

Of course it is not to be supposed that the present rush in stoves will be maintained for any length of time but that a satisfactory business is assured is borne out by the fact that the immense numbers of residences being constructed are eagerly bought or rented before completion and occupants have to provide furniture for their needs.

Grenfell.—The stores here will close on Wednesday afternoons during June and July.

Bowmanville.—The merchants will close their stores on Wednesday afternoons during June, July and August.

Methods of Retailing Paints and Varnishes

An Effective Interior Paint Display

Arrangement of Paint in the Store of J. W. Richardson, North Bay, Leads Directly to Large Number of Sales—The Necessity of Adequate Display in the Store for Purposes of Rousing up the "Latent Demand."

Methods of interior display of paint in the hardware store have improved of late years. Time was when the cellar was good enough for paint. In time it was graduated to a place on the main floor, but the place was generally a very inconspicuous one. Recently there has been more of a tendency to give the stock the benefit of adequate display in the store.

The importance of getting paint to the front cannot be overestimated. There are two points about paint which dealers all too frequently forget. The first is that there is a large latent demand for paint which remains latent (or inactive) if nothing is done to arouse it. In other words, if the dealer keeps his paint stock snugly ensconced in some corner at the rear of the store where it can hardly be seen with the aid of a spy-glass, there will be dozens of his customers go paintless who could easily have been brought to buy. The second fact is that, when properly displayed, paint sells itself. If cognizant of these facts, no dealer can rest easily until he has brought his stock well to the front of the store.

It will not do to dismiss summarily the question of the "latent demand." There is a latent demand for most every article that the hardwareman handles but more particularly for paint. It can best be defined as the necessity which people feel for a certain article but which requires a strong effort, on the part of some one else, before it is brought to the surface. For instance, a man may recognize at odd moments that his house needs a new coating of paint. However, he sees the house so often that the necessity does not appeal to him as strongly as it does to an outsider. There is nothing like living with some such necessity or shortcoming to become accustomed and indifferent to it. This man, left to himself, may go on neglecting his property for years when, if a real effort had been made to sell him paint, he would at any time during those years have proven a more or less ready customer. There are in every locality dozens of men in just that position and that state of mind. This is what might be termed the latent demand.

Now one of the surest ways of bringing the latent paint demand to the surface is to keep paint where customers cannot help but see it every time they come into the store. This in itself will make sales. It is better, of course, if a little salesmanship on the part of the staff is thrown into the scales as well but, even if no further effort is made, the mere constant display will do the work.

One of the best interior arrangements that has ever come to the attention of Hardware and Metal is shown in the accompanying illustration. This formation of paint stock was placed in the store of J. W. Richardson, North Bay, around Good Friday, on which day the convention of Northern Ontario hardwaremen was held at that place. Considerable ingenuity was displayed in the arrangement of the goods and the effect when finished, as the illustration attests, was most excellent.

Placed in the centre of the floor, this formation of paint stock was by long odds the most prominent feature of the store. It caught the eye of everyone who entered. If they were at all interested in the question of paint, this display was sufficient to ensure a sale at once. If they had not previously been interested, the display got them interested.

The results were immediate, direct and most satisfactory. Mr. Richardson has made a great many sales which he can trace directly to this aggressive method of displaying his stock.

It is probably not possible at all times of the year to give so much floor space to the paint stock. It becomes necessary, therefore, to provide other means of display which will do for all seasons. The dealer who gives a prominent place in the store to his stock, who keeps it neat, clean and well sorted up achieves this purpose. He caters to the "latent demand" the whole year around.

A striking display of paint in the store of J. W. Richardson, North Bay.

Preparing the Home for the Ceremony

The Need for Paint and Varnish is Felt—Dealers can do a Lively Business in These Lines by Offering Them For Sale for the Decoration of Houses Previous to Marriage—Methods Followed by Toronto Dealers.

What about the wedding trade in the paint department?

Surely, some one may object, paints and varnishes are not to be considered as suitable wedding gifts.

No, it is not the writer's intention to assert that a gallon tin of paint would make an acceptable present in any sense of the word. It would look rather incongruous, we fear, perched on the table amid the handsome pieces of silver and brass and the sparkling cut glass.

Nevertheless, the fact that June sees the culmination of so many of Dan Cupid's wily plottings, should mean something to the dealer in paint. A wedding is preceded by mighty house-cleaning and a most complete process of renovation in the home. If the house must look at its best at any time, it is when there is a wedding ceremony on. A wedding means the home-coming of all members of the family, the advent of countless relatives on both sides and the invitation of friends and acquaintances; and, therefore, the house must be in apple pie order.

It is not hard to perceive where the paint dealer comes in. No home can be made absolutely fresh and clean without the use of paint, varnish and interior stains. The floors are always more or less scratched and dulled, the woodwork soon shows the need of a new coating and the furniture will require to be polished up. This condition of affairs cannot be remedied by soap and a scrub brush. There is only one remedy and that can be obtained in the paint department of the hardware store.

The anxious mother of the prospective bride does not always realize this. She is determined to have her house looking its very best for the big event but it may not occur to her that the best friends she could summon to her aid would be a tin of paint and a brush. She pins her faith to the scrub brush and the mop. Paint, it seems to her, lies within the province of the landlord.

If the matter were presented in the right light, she would be led to see that, for a very small outlay, the house could be given a new appearance quite impossible of accomplishment in any other way. The dealer who takes steps to spread this information will have no difficulty in finding customers.

Sent Out Circulars.

Last year a Toronto dealer worked up a good trade by sending a personal letter to every woman in his district in whose home a marriage was to take place. The information he secured in various ways—watching engagement notices in the papers, by enquiry from the issuers of licenses and by keeping close tab on the gossip of the neighborhood.

His letter hinted at the coming event as being likely to cause much careful preparation and proceeded to point out the good results which could be obtained from the use of paint and varnish. He sold a large quantity and was able to trace direct results in a great many cases.

ALLAN MUNRO STARTS MANUFACTURE OF DRY COLORS.

Montreal, May 30.—Allan Munro, for twelve years connected with the Canada Paint Company, has left that concern to start manufacturing for himself. He has formed the Allan Munro Color Company, Limited, of which he is to be president.

During a business connection of twelve years the right sort of man is going to make a number of close friends; and it was evident when Mr. Munro regretfully took his leave, that he is considered the right sort of man by those who know him best. He was presented with a handsome gold watch and fob, Mr. Aird and others assuring him that he took with him every good wish of those with whom he has been connected during his years with the Canada Paint Company. They wished sincerely for his success.

Starting with the Canada Paint Company, Mr. Munro held an office position, but soon moved to the factory, being engaged in the color making plant for four years. Then he returned to the office, and of late has been joint manager.

The Allan Munro Color Company is to have headquarters on Britannia Street—the building, in which all lines of dry colors for the manufacture of paint will be made, being now in course of construction. The color house is to be of concrete, three storeys in height, and will be equipped with all modern color making appliances. The colors are to be dried in concrete chambers, and at present boring operatins are going on, so that the colors may be mixed with spring water.

Mr. Munro expects that the new plant will be running by the middle of December. The temporary office is situated at 123 Britannia Street.

According to the definition of an early philosophical authority: "Life is the force by which objects preserve their own being."

This definition is apparently broad enough to include many forms of existence.

I have endeavored when pondering on the limitless power which is concentrated in our minds by the word "life," to make if possible a connection between it and our business interests.

We often refer to ourselves as engaged in commercial life and perhaps complain occasionally that trade is lifeless.

And even those modern inciters to renewed business efforts, the trade papers, encourage us to create more life into the store management.

It would be a happy consummation if we could learn the secret of imparting to a store the force necessary to operate itself independently.

Then the holiday with its desirable broadening and recuperating effects would become general.

And an increase in pleasurable emotion could be expected when absent from business because of the confidence in the organization's own strength.

The successful momentum which seems to belong to some stores and is felt even by visitors upon entrance, must be received from a source of power extraneous to itself.

It is not drawing its vigor from favorable situation or even by absence of opposition.

We have sometimes noticed the prosperous business under changed management decline from vigorous life, languish for a period and finally expire.

It would therefore seem that not very great difference exists between one business and another of the same division of trade.

In so far as either is able to perpetuate itself for its owner's advantage they are on a parity.

We must arrive at the oft repeated conclusion when discussing the viscissitudes of modern retailing, that the onus of producing a successful business organization must continue to fall upon the owner.

Free Help for Every Decorator

Our new service department will help you plan the interior and exterior painting and decoration of any house or of a part. In place of a small job, you can get a big one, well planned and done. Remember the

Special helps for the decorator or dealer to get him good business.

M-L MAPLE LEAF

Every decorative problem properly answered for best results.

DECORATIVE AID DEPARTMENT

M. L. PAINT is best-lasting exterior paint, improved during 20 years of careful tests. The kind that helps your business when you sell it. Ready to use.

FLOORGLAZE, a flint-hard, glass-like and beautiful floor finish that applies easily, stands wear, resists scratches. Best of all interior finishes.

is at your free service. Just send us your problem. We give you exactly the right shades and line of goods to use. We give you suggestions. Give areas and we tell exactly how much paint you need, or varnish, or flat wall color. Stencil suggestions, too. Get booklet.

ELASTILITE, an indoor or outdoor varnish that is applied easily and perfectly. You can guarantee it. It gives every satisfaction. A beautiful finish.

M. L. FLAT WALL, an easy-to-clean wall paint for plaster, burlap or wood, in beautiful interior shades. Sanitary, clean and adapted to stenciling.

Samples of the above finishes on request. The Decorative Aid Dept. supplies suggestions, estimates and stencil designs (stencils also at low cost) to any decorator, painter or dealer who wants to give his customers the best and most modern service. Freely at the service of the entire retail trade. Send your problems.

Weekly Market Report --- Paints

The paint situation is still shrouded in uncertainty. Some predict advances shortly in the prices of prepared paints in view of the fact that white lead and linseed oil are so high. Others are doubtful, and in the meantime all opinions are more or less of a conjectural nature.

Putty prices have been advanced at Toronto, as expected for some time.

MONTREAL.

Montreal, May 30.—There still remains some uncertainty as to the future of mixed paints. Metals continue high. There is no likelihood that linseed oil will become much lower in price. The manufacturers seem to feel that they will have to advance their charges, and yet they are loath to do this.

Other products, too, are somewhat uncertain. White lead, for instance, is none too steady. The demand is large, and since the raw material is scarce in the extreme—scarcer than any metal—it appears quite possible that the makers may be compelled to cover the increased cost of manufacturing by charging more for the finished product.

Advance Over Last Year.

Generally business continues good. The orders for paints keep pouring in. People are using more paint than ever before—at least so it would seem. Certainly the sales so far this year are much in advance of those made in the early months of 1911, and there does not seem to be any good reason to expect a falling off.

Linseed Oil.—Conditions here are a little easier. Some cargo's of flax seed have arived from the west, and one mill which had to practically cease operations on account of a scarcity of seed, has commenced grinding again. The paint houses are feeling more sure of their supply, and while they are not yet pressing the sale of oil, this is rather because it yields them little profit, than because they desire to keep it to assure them a supply for their own paint making.

There has been no change in price. Linseed may still be obtained at $1 and $1.03.

Fear Substitutes.

Turpentine.—Suplies here are sufficient, and prices are still quoted roughly at .70. There seems to be a feeling that it would be unwise to advance this price since this might tend to induce the use of substitutes—a number of which are now on the market.

White Lead.—The Dockers' strike in England may have an effect here. Lead comes largely from London, where the strike is taking place. That is English lead comes from there, and English lead is the lead just now, for there is practically no Canadian lead on the market. Let this strike interfere with shipments and the local supply—scarce enough at present—will become scarcer still. The shortage of stocks might cause an even higher price for the pig, and then the price of white lead would be forced up. It seems likely that the strike will reach an early settlement, but if not the recent 15 cent advance will be followed by another.

White lead now is in large demand.

A Possible Future Shortage.

Putty.—The large orders are already being received. The supply to meet these is fair, but there is no great reserve. It would seem, indeed, that there may be a shortage later on when the heavy fall demand starts.

Mixed Paints.—The necessity of making a ten cent advance is till being considered. It would seem that this must come, but the makers appear anxious to avoid setting the higher figure sooner than is absolutely necessary. Nevertheless, dealers with stocks which are at all depleted would do well to order now. He can hardly lose, and he stands a good chance to save ten cents a gallon.

TORONTO.

Toronto, May 30.—The paint situation is still unsettled. While talk is heard on all sides of a possible advance in the price of prepared paints, there is certainly nothing definite heard. Quite a few assert that they do not think an advance will be recorded yet awhile, despite the absolute certainty of linseed oil and white lead remaining high. Just what the outcome will be is hard to say, but one thing seems reasonably certain, any further advance in white lead and oil will precipitate a crisis in the matter of paint prices.

The only change recorded this week is in the case of putty, where a higher scale has been set all around. This advance has been anticipated for some time, and has been freely predicted in Hardware and Metal.

Linseed Oil.—The price of oil remains at $1.03 for raw and $1.06 for boiled here. It is fairly scarce at the present moment, the scarcity being due pretty largely to the difficulty found in getting cars. Demand has been brisk.

"Turps" are Steady.

Turpentine.—The price of turpentine remains at 71 cents locally. The demand is reported to be seasonable.

More "Advance Talk."

White Lead.—Rumors have broken out again with reference to the possibility of the 'steenth advance in white lead. It is acknowledged that the present price of $7.15 is none too high, and when, added to this, word comes of a shortage in English lead as the result of a strike, it is no wonder that rumors are again circulating of an impending advance. Local jobbers express their belief that it will not be so very long before the grinders will have to give the price another advance to meet conditions as they exist, and cover the cost of the raw material.

The demand for white lead here is very satisfactory.

Advances in Putty.

Putty.—The long predicted advances in the scale of putty prices have at last been put into effect. In some lines the increases are stiff. The new scale is as follows: Standard, bulk in casks, $2.40; in 100-lb. drums, $2.55; in 25-lb. drums, $2.65; bladder in barrels, $2.80. Pure putty prices are as follows:—Bulk in casks, $3.00; in 100-lb. drums, $3.40; in 25-lb. drums, $3.50; bladder in barrels, $3.40. The advance in standard putty is 15 cents, in pure about 40 cents.

Glass.—The glass trade is showing a satisfactory degree of briskness. Some good orders are now being placed. Prices are standing firm.

Prepared Paints.—As stated before, the situation has shown no change, but increases are being predicted by some. In the meantime, the demand is very heavy. The trade in paint, in fact, is steadily breaking all records.

WINNIPEG.

Winnipeg, May 28.—The weather so far has been very unfavorable to outside work in painting and business has to a certain extent suffered in consequence. This is, however, but a temporary setback, and with the enormous amount of building in progress and planned, there is every prospect of a record season's business.

There has been a brisk trade in kalsomines and stains and varnishes and accessory materials for spring cleaning. During the next two weeks these lines should move fast.

Linseed oil has made no further advances, but flax prices are high, and a further advance is not improbable. White lead is also firm, and quite liable to advance in sympathy with the strength in both oils and lead. At the time of writing the weather is clear and warm and appears more settled.

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

DO you realize what a clean-cut, varied and fresh stock of quality goods means in your paint department?

It just represents the difference between a bumper business and splendid profit and a slow-moving, unsatisfactory and unprofitable line!

Why not feature **MINERVA PAINTS** and **PAINT SPECIALTIES**—the famous British Brand, backed by 78 years' reputation for quality?

We can't make them any better than they are, so we are putting Full Imperial Measure of these quality paints into every can.

And our co-operation with the dealer has created a demand that will bring customers to your store.

It will pay you to investigate the **MINERVA** proposition.

Ask any **MINERVA** agent.

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.

377 Carlaw Ave., Toronto Established in England in 1834

L 26

Steel Tanks and Self-Measuring Pumps for Paint Oils

They avoid all the loss and inconvenience sustained under the old method. The steel tanks are air-tight and will not permit the oil to gum or stick. The pumps measure the oil according to the Imperial Standard, directly into the customer's can. They count the gallons pumped and compute the charge for fractional gallons.

THE BOWSER PAINT OIL SYSTEM

will put every cent of profit into your pocket, where it belongs. With a Bowser your paint oil department will be as clean and inviting as your shelf hardware department. It draws trade.

Why not investigate now and be ready for spring. Your fellow merchants are using them. They'll help you. Ask for book No. 15.

S. F. BOWSER & COMPANY, INC., TORONTO
66-68 FRASER AVENUE

For Twenty-seven Years Manufacturers of Self-measuring Pumps, Tanks, Gasoline and Oil Storage Systems, Self-registering Pipe Line Measures, Dry Cleaning Systems, etc.

Do you know any of these Bowser users?

WE WANT A MAN

of good character, in each city, town and village in Canada, where we are not already represented, to act as our

SPECIAL CIRCULATION REPRESENTATIVE.

Work is dignified and educative. Previous experience unnecessary. Duties at first need not interfere with your present employment.

WE WILL ASSIST THE RIGHT MAN TO BECOME INDEPENDENT FOR LIFE.

If you are making less than $100.00 a month, and are trustworthy and ambitious to learn and become competent to handle our business in your vicinity, write us at once for full particulars.

MACLEAN PUBLISHING COMPANY,
143-149 University Ave., Toronto, Ont.

JAMIESON'S CREOSOTE SHINGLE STAINS

are the best preservative for shingle roofs.

They also give an artistic appearance that cannot be obtained with ordinary paint. They are made in a variety of

PERMANENT COLORS

and will stand all kinds of weather.

Every year the demand for shingle stain is growing.

It would pay you to give it careful attention.

Let us send you some of our new sample cards.

THEY WILL INTEREST YOU

Paint and Varnish Removers

MR. DEALER: When you buy Paint and Varnish Remover remember that QUALITY is more important than Price. A good Paint Remover is a help to the painter; a poor Paint Remover is a nuisance. The fact that all the leading manufacturers of paint and varnish in Canada and the United States who handle paint removers at all are licensees of this company and manufacture under our patents is the strongest possible testimony that the only practical, satisfactory and efficient removers on the market to-day are those covered by our patents.

SEE THAT EVERY CAN IS MARKED "LICENSED UNDER CANADIAN PATENT No. 78,586"

The above Canadian patent corresponds to our U.S. patent No. 714,880, which is the basic patent under which modern paint removers are manufactured. The following well-known and highly respected Canadian companies sell paint and varnish remover manufactured in Canada under our patents:

	NAME OF BRAND
The Sherwin-Williams Co., Montreal, Canada	"Taxite"
International Varnish Co., Ltd., Toronto Canada	"Klensa"
Pratt & Lambert, Inc., Bridgeburg, Ontario, Canada	"Expedite"
British American Paint Co., Victoria, B.C.	"Bapoo"
Mount Royal Color and Varnish Co., Montreal, Canada	"Scrape-off"
James Robertson Co., Ltd., Toronto, Canada	Robertson's Paint and Varnish Remover"
Sanderson Pearcy Co., Ltd., Toronto, Canada	"Devolite"
Stewart & Wood, Toronto, Canada	"Solvo"
Martin-Senour Company, Ltd., Montreal, Canada	"Martin-Senour Paint and Varnish Remover"

The character and standing of these companies is a guarantee to you that the paint remover sold by them is the best that can be produced.

You take no risk when you buy one of the licensed brands of Removers. They are harmless and efficient. They contain no carbolic acid or alkali. They are neutral.

Chadeloid Chemical Company

100 William Street
NEW YORK, N.Y.

A "Canada Paint" Product for Every Requirement

The line of The Canada Paint Company is a varied and comprehensive one.

We make a paint and a varnish to meet every need, whether of the professional painter and decorator, or the private property owner.

From the common barn paint to the highest quality enamels, The Canada Paint Line is complete with a variety of paints and varnishes of good quality, enabling the dealer handling the full line to supply every paint need in his community.

C. P. Products offer a generous margin to the dealer ; this combined with an established quality reputation of nearly 50 years, makes this line unbeatable as a producer of profits.

Writs us concerning our proposition.

The Discount Discounts The Terms

Glidden

Discounts

Don't be deceived by the salesman who talks terms instead of discounts.

Ask yourself this question:

Isn't the argument that some salesmen make of long terms after all a cheap argument?

Remember, eventually you pay the bill.

N. B.

Never turn a Glidden salesman away. He talks Discounts—and Discounts make profits.

UNDOUBTEDLY you can get longer terms from other varnish houses, but you can't get as good a discount, and *the discount discounts the terms.*

Read that sentence again and think it over.

If profits are what you are looking for, you must get the discount or you are cheating yourself. Could any terms you ever heard of—two months, three months, six months, or seven years induce you to cheat yourself?

That Glidden discounts are the best, *you* can demonstrate. That Glidden Green Label Varnishes, Endurance Wood Stains and Endurance Colorspar are the best, *we* can demonstrate.

That Green Label Varnishes, Stains and Specialties are most profitable to you, your customers will demonstrate.

Let us send you full particulars of our unequaled proposition to the trade.

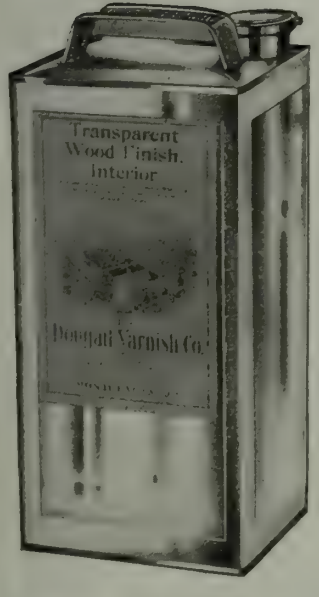
GREATER SALES-GREATER-SATISFACTION-GREATER—PROFIT

It is the quality the manufacturer puts into his paint that gives the greater satisfaction — that makes greater sales possible, and returns the greater profits to the paint dealer. The dealer who handles

Martin-Senour Paint
100% Pure



finds his business growing as a result of the presence of the quality of *lasting service, non-fading color, luster, free flowing, surface covering capacity* put into paint by its makers. If you want the greater sales and the greater profits that come as a reward for greater satisfaction, sell Martin-Senour Paints. Don't put off writing for the agency

VARNISHES

IT'S QUALITY AND ADVANTAGES THAT MAKE

CANADIAN HOWARD DOUBLE RADIATOR FURNACES

THE CHOICE OF MOST BUILDERS

The "HOWARD" Furnace means an enormous economy in fuel to the user, as the heat and gases have to pass through two radiators, thereby greatly reducing the heat by the time it reaches the smoke pipe, which, in the ordinary furnace would go up the chimney.

We employ only the most skilled mechanics and use only the best materials in the manufacture of this furnace.

Mr. Dealer, if you want to handle a line that will prove completely satisfactory to your customers, and a money-maker for yourself, investigate the HOWARD. Remember it is absolutely guaranteed. Write us for particulars.

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

The "IDEAL" LAWN FENCE

"An Attractive FENCE Which Pays An Attractive PROFIT"

The Ideal Fence appeals to the public because it is neat and ornamental, very strong and not expensive. Has a close mesh which keeps chickens and small animals out of the yard.

The Ideal Fence not only affords protection to the lawn, but adds greatly to the appearance of any place in which it is erected.

One very important feature about Ideal Lawn Fence is that it is made of No. 9 hard steel evenly galvanized wire. No soft or cabled wire is used, so that when once erected it does not stretch, but maintains its original appearance without bagging or sagging.

This fence can be put up quickly, and at a small cost, by anyone, and will accomplish the same result of efficiency and appearance as an iron fence costing many times as much.

Write for our catalogue and prices now and catch the Spring trade.

BAR IRON

Learn wisdom by the follies of others

Many dealers dazzled by the prospect of a big first profit recommend a certain article regardless as to whether or not that article will give a customer the greatest possible satisfaction.

This short-sightedness has proved fatal to many a dealer. Unless a customer is thoroughly satisfied, your chances for his future trade are small; but the greater his satisfaction the surer you are of his steady trade.

It's the cumulative value of a sale that counts—that's why.

It pays to sell the FORD

Auger Bit in preference to all others. It gives **maximum** satisfaction every time in every way. Your profit may not be quite as large on the first sale—**but sure repeat sales** will boost the total profit way over and above **that** obtained by "One time—large profit" sales.

If you, Mr. Dealer, are following on this latter plan in your Auger Bit trade, just try pushing the **Ford**, and note carefully the result. It will convert the occasional buyer into a steady customer and make every buyer a satisfied customer.

Dealers who have tried this know it to be a fact. Will you be the next?

Write us for catalog and circulars.

Pumps that Carry Good Will

Dealers that sell McDougall's "Aremacdee" Hand or Motor Metal Force or Lift Pumps give their customers lasting satisfaction.

Every pump sold stays sold—gives the dealer no trouble.

They are metal—hand fitted valved—air-tight—strong—lasting.

The big catalogue tells you exactly what the line is—get it for the asking.

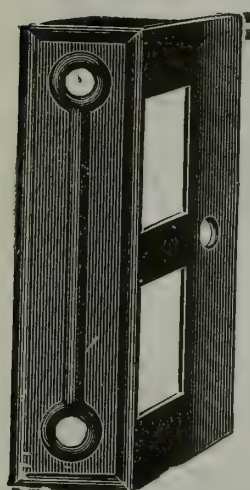
Why Not Sell the BEST Fence?

When you sell a fence your customer holds *you* responsible for its quality—not the maker. So why not sell the fence that will satisfy your customers and bring them back for more? Read what some dealers have to say about the

Peerless Fence

Saves Expense



There is no fault to find with your fence. the fencing I put up four years ago is just as good as the day I put it up, showing no sign of rust and giving good satisfaction. It is an A No. 1 Fence. The **PEERLESS** around here stands the test better than any other make that I have seen.—John Mason, Spring Brook.

I have been well pleased with all the wire I have received from you. My customers are all highly pleased with all the **PEERLESS** fencing they have received from me, and although opposition is very strong in the community, **PEERLESS** Fencing is taking the lead.—Wm. F. Mills, Wheatley.

I must honestly confess I have found **PEERLESS** Fencing, once stretched, perfectly satisfactory. I have never seen any rust on it yet, nor have I received one complaint from the many different men I have sold wire to.—J. H. Craig, Metcalfe.

We manufacture farm and ornamental gates, lawn, farm and poultry fences of a quality that will build up good business for you. Write for particulars.

OFFICE AND FACTORY: 225 ST. AMBROISE STREET, MONTREAL

Long Service Is A Natural Result Of The "Twisted-While-Hot" Process

It must be annoying to the average drill user to have drills made from well-known brands of steel fall down on the job. He wants efficiency and can't get it because it's milled or ground away in the process of manufacture.

"Hercules" High Speed Twisted Drills

are made from a High Percentage Vanadium High Speed Steel under the only "twisted-while-hot" process that retains all the strength of the steel in the finished drill. The grain of the steel is undisturbed, insuring longer edge-holding and greater resistance to the strains of the metals having different degrees of hardness.

The taper shanks, usually one size larger than ordinary, prevent tag troubles and give a greater driving power because the drill fits into the chuck firmly and in the center.

Your jobber will supply them or you can send order direct. Send for Catalog 74-B.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

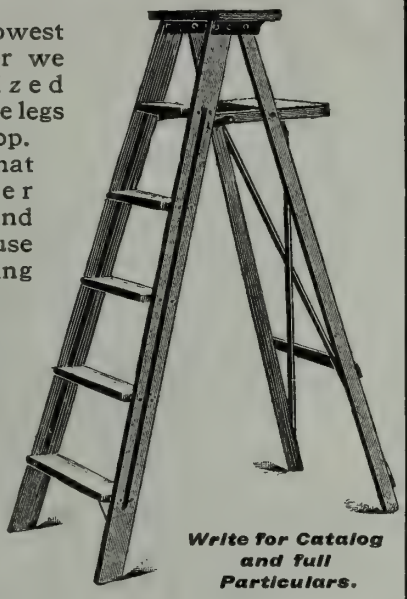
For Increased Business
Sell the



SELF LOCK STEP LADDER

This is the lowest priced step ladder we make. Galvanized steel ears fasten the legs and risers to the top.

The lock that holds the ladder from opening and closing when in use is made by using strips of steel to form a hinge with the arms that support the shelf.

The shelf is always up when the ladder is closed and horizontal when in use. This is a very convenient and practical house ladder where short lengths are used and it is certain to appeal to the puplic.

Made regularly 4 to 10ft.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

ADS AND SALES

A Study of Advertising and Selling from the standpoint of the New Principles of Scientific Management.

By Herbert N. Casson.

An Invaluable Book for the Manufacturer, Jobber and Retailer.

This is the first book which has attempted to apply the principles of Scientific Management to the Problems of Sales and Advertising.

Cloth-bound, Limited Edition, 167 pages.

Sent Postpaid on Receipt of $2 to any Address.

Technical Book Department

MacLean Publishing Co.

143-149 University Avenue, Toronto

Whenever you Want

To SELL A BUSINESS

BUY A BUSINESS

HIRE A CLERK

LOCATE A NEW POSITION

or get into touch with the whole hardware trade for any other purpose—try a Hardware and Metal Want Ad.

Rates, payable in advance:

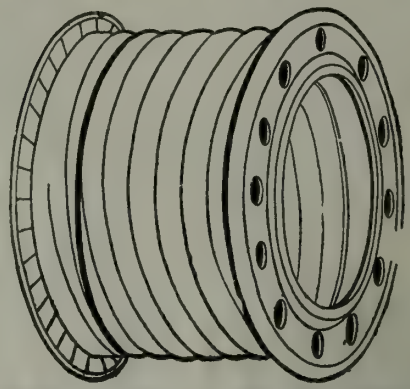
2 cents per word first insertion
1 cent per word subsequent insertions
5 cents additional each insertion when box number is required.

For a few cents you can introduce your proposition to nearly everyone interested in the Canadian Hardware Trade.

The D.L. EXTRUDED METAL CORNER BAR FOR STORE WINDOWS

combines strength, with a neat, light appearance.

The nicest, best finished and most substantial CORNER BAR made—and it is a *low priced* bar.



Send for sample, prices and discounts.

Not an Enterprise for the "Quitter"

¶ "If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom.

¶ "He must know before he begins it that he must spend money—lots of it.

¶ "Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.

¶ "Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

TWO CENTS PER WORD

You can talk across the continent for two cents per word with a Want Ad. in this paper.

INDEX TO ADVERTISERS

Occasionally advertisements are inserted in the paper after the index has been printed. The insertion of the Advertiser's name in this index is not part of the advertising order. The index is inserted solely for the convenience of the readers of the paper.

WHY YOUR CUSTOMERS WILL BUY

SOCLEAN

Soclean is economical.
Soclean lays dust.
Soclean saves scrubbing and dusting.
Soclean brightens and preserves carpets
Soclean is a disinfectant.
Soclean leaves a fragrant odor.
Soclean is a moth killer.

Seven good rersons why you should stock it—each one sufficient enough to command the respect of customers for Soclean and to ensure their repeat orders.

Put up in pails to sell at 25c., 50c. and $1.00

SOCLEAN LIMITED, Toronto, Ont.

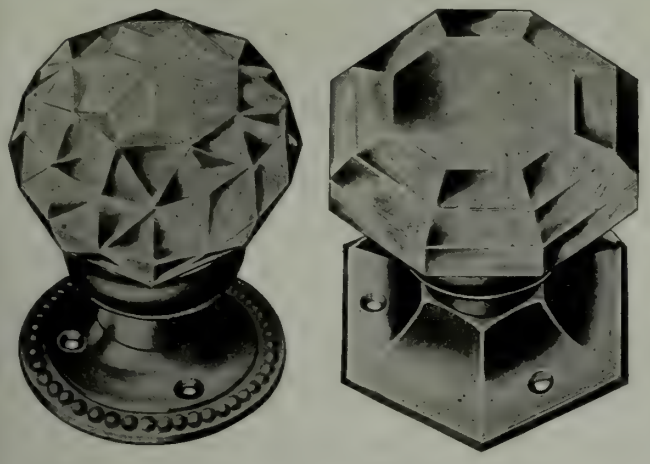
When He goes on His Vacation

Be sure He takes along a GILLETTE

When you start to feature holiday goods in your windows, show cases and newspaper advertisements, [illegible] GILLETTE [illegible]



To one man you can sell fishing tackle—to another a gun and ammunition—to another golf, tennis or baseball supplies, according to his individual taste. But the GILLETTE appeals to [illegible] The GILLETTE appeals with special force to the man who is off on a trip. With it he can shave with comfort and dispatch in a heaving steamboat cabin or a lurching Pullman—in a crowded city hotel or beside a stump in the backwoods.

The Pocket Edition GILLETTE is the most compact Safety Razor made—the Combination Sets the most complete and luxurious. But the best feature of all is the cool, clean, comfortable three-minute shave which the GILLETTE insures to every man, everywhere. You can talk this feature as strongly as you like—the GILLETTE will make good your claims every time, with a margin over for that good will which means so much for your future trade. Don't let slip these splendid opportunities for vacation trade in GILLETTES.

LEWIS BROS. LIMITED, MONTREAL

OTTAWA - TORONTO - VANCOUVER

CAN WE HELP YOU

There are some hardware dealers living in this 20th Century who are still using 19th Century methods. They do not realize that Halifax is closer to Vancouver to-day than Montreal was to Toronto fifty years ago.

Twenty-five years ago it was a calamity for a merchant to lose a good clerk, for he knew it was practically impossible for him to get in touch with an experienced man. Such an idea as making a deal with a fellow hardware man a couple of hundred miles away either to buy a set of tinners' tools or to sell a second-hand counter or show case, did not seem practicable to even the most progressive hardware men. If a man wanted to sell his business he had to accept the highest price he could get from some one of his fellow townsmen, for no one else knew of the opportunity or had any means of finding out about it.

To-day the up-to-date dealer

CREATES HIS OPPORTUNITIES

He states his wants briefly in a "Hardware and Metal want ad." and in four days' time practically every hardware merchant, clerk, hardware manafacturer and traveler has read the proposition, and it seems reasonable that somewhere among the "blue noses" of the Maritimes or the pioneers of the boundless West someone will want just what he has to offer.

EVERY HARDWARE MERCHANT IN CANADA

can take advantage of our "want ad." page. Ask yourself:

Is there not some article I would be better without if I could get a fair price for it? If you cannot get a fair price for it by appealing to the trade throughout Canada you had better sell it for scrap

We can help you, but you must take the first step.

Surely it is worth 25c or 50c to find the one man in Canada whose wants dovetail into just what you have to offer.

RATES: *(payable in advance)* **2c per word first insertion. 1c per word subsequent insertions. Box Number, 5c additional each insertion.**

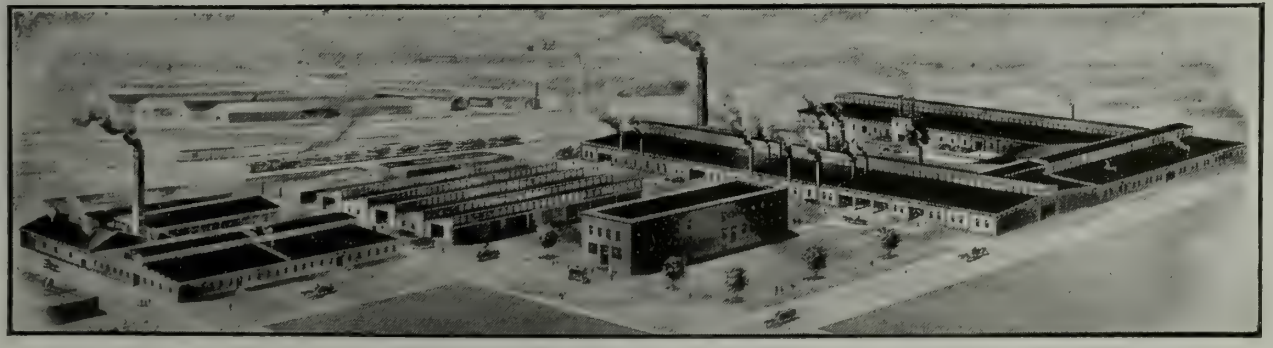
HANDLE BRANTFORD ROOFING

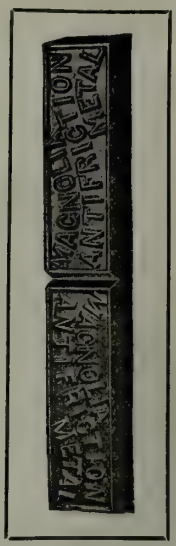
And Secure the BEST Roofing Trade in Your Vicinity



Every time you recommend this high-grade roofing you are paving the way for more and better business BRANTFORD ROOFING, as you know, is practically indestructible, and there is a fair margin of profit that will please you.

There are three kinds of Brantford Roofing—ASPHALT, RUBBER and CRYSTAL—and each of the three different kinds is made of long-fibred wool completely saturated with pure Asphalt (a mineral fluid that has withstood the ravages of time for centuries).

Write to-day for samples and FREE roofing book.



BRANTFORD ROOFING CO., LIMITED, - - - Brantford, Canada

Branch Warehouses—MONTREAL, 9 Place D'Youville; WINNIPEG, 117 Market Street

The George White & Sons Co.'s plant, London, Ont., situated beside the G. T. R. main line, and right in the danger zone of flying sparks and hot cinders. But they are well protected, for even their boiler house and foundries are covered with Brantford Roofing.

SHAFTING BEARINGS

Countless thousands of dollars have been wasted in power, oil, metal, labor etc. in a mistaken idea of economy by using cheap or inferior metals on shafting bearings. The following letters show the value of Magnolia Metal for that service.

THE CITIZENS ELECTRIC CO., LTD.
Smiths Falls, Ont., Jan. 25th, 1911

Gentlemen:—
Yours of the 27th inst. to hand and noted, Regarding the boxes you mentioned lined with "MAGNOLIA METAL" would say we have 60ft. 3½" shaft, running 300 rev. per min., running all night and every night in the year, put up over *10 years ago*, and still running perfectly, and has never been touched in that time except for oil, and one tablespoonful will run each box for 12 hours.

Yours very truly,
J. A. SCROGGIE, Eng. & Electrician.

KAUKAUNA GAS, ELECTRIC LIGHT & POWER CO.
Kaukauna, Wis., Jvne 15th, I911.

Gentlemen:—
I have used "MAGNOLIA METAL" for the past six years. I placed some of this metal in chain oiling boxes on a 4-7-16" line shaft running 278 R.P.M. in October 1905. This shaft has been running continuously 24 hours a day ever since. I have not found it necessary to rebabbitt any of these boxes to date nor have I had any burn-outs. I am also using Magnolia Metal for belt driven dynamos, ranging in speed from 900 to 1275 R.P.M. and have found the metal much more satisfactory than any other I have used,

Yours truly,
N. B. MONTGOMERY, Chief Engineer.

SPECIAL OFFER

PRACTICAL ENGINEER POCKET BOOK, 680 pages, over 2000 subjects. Price 40c. post paid. We do not aim to make a profit on these books. We buy them in large quantities as an advertising medium and give Engineers benefit of low price. They are highly spoken of by Engineers. Address Montreal office.

The "RENFREW" Handy Two-Wheel TRUCK SCALE

"A Convenience and Protection for Farmers"

This is a scale that pays the dealer A VERY ATTRACTIVE PROFIT—a scale that is becoming more and more popular every day with farmers.

It is absolutely accurate and has many advantages over the common scale.

With this scale in his possession the farmer knows the exact weight of the products he is selling—he is armed against short weights.

The "RENFREW" TRUCK SCALES are GOVERNMENT TESTED and have been awarded their GOVERNMENT CERTIFICATE without question, and are backed by our WRITTEN GUARANTEE to be just as represented, and to give a long, reliable service. Capable of weighing anything from a single pound to 2000 pounds.

The "RENFREW" TRUCK SCALES are rigidly built and will stand all kinds of rough usage.

LET US SEND YOU ONE. Show it to every farmer who comes into the store, and see how many you can sell.

Write for Circulars and prices NOW.

The New Preston O. G. Square Bead Eavestroughing

We have always claimed that our eavestroughing was the best on the market, but we have gone ahead and gotten out something that is far superior to our old make. Now we can claim that we can't be beat when it comes to our eavestrough.

Some time ago we advised all the trade that we were manufacturing O. G. Square Bead eavestroughing by machinery which assured absolute uniformity in shape, but it developed that our machinery was not heavy enough to produce as sharp a bead as we desired. We have now perfected and patented automatic steel dies to fit our large power press and we now guarantee a trough superior in shape, appearance and fit to any other on the market.

You can save time and solder in the erection of this eavetrough FOR EVERY PIECE IS EXACTLY THE SAME and fits snug and tight. There are more profits for you and more satisfaction if you use our make. See our special offer below and take advantage of it at once.

Cut out this ad. and mail it to us to-day with your order for 250 feet of our new O. G. S. B. Eavestrough and if it is not exactly as we represent it we will make you a present of it. This offer is good for thirty days.

W. 186 Waterproof Wrapping Papers

May SEEM unnecessary to the average merchant, but consider the reason why so many progressive concerns are discarding ordinary wrapping for one which will effectually prevent the rusting or tarnishing of metal goods.

It is just as economic inasmuch as one sheet is sufficient to wrap goods where two or three would be used of ordinary paper purely as a means of protection.

Suggest to your wholesaler that it will be found mutually advantageous to use,

Practical Hints on Window Dressing

Window With Proper Background Has an Advantage—How Lack of Background Can be Overcome—Window Trimmers Should Keep Plenty of Fixtures on Hand—Pay Attention to Classification of Articles—Realism and Originality.

By Chas. Byford, Newmarket.

The ideas and problems of window dressing that present themselves to the trimmer are very numerous.

The construction of the window is an important matter to the trimmer. In my opinion the window that is cased in, but built in such a way that it can be easily removed, if necessary, has a decided advantage over the open one. Of course, it depends largely upon the articles to be displayed. But take for instance a cutlery or Xmas trim, and compare the one that is cased in with a good background, keeping the goods clean and the window glass clear in frosty weather with the one that is not cased in.

I think you will find the one cased in with a background centres the attraction of the onlookers to the articles shown, whereas with the open one the attention is distracted by reason of the view obtained of the interior of the store, especially at night, when the lights are on. Our windows are not cased in, but for Xmas trims I arrange a board background covered with cloth. For paint displays I use white cheesecloth, and so on, to suit the trim.

Making Fixtures.

Fixtures such as display boards and shelves can be easily made of different designs and sizes. It is a good idea to have a varied assortment of these boards on hand. They do not take long to make. If I have not a good variety, it is difficult sometimes to work the same ones into two different displays. I find that boxes about 20 inches by 16 inches and 6 inches deep are very useful for the floor, as they can be either laid flat or stood on end. Thus you can arrange steps to take off the flatness that sometimes presents itself in a cutlery or tool trim.

Classification of Goods.

Articles to be displayed should be classified separately in each trim, such as cutlery, tools, tinware, graniteware, stoves, etc. In showing tools, for instance, all sizes of, say, chisels or screwdrivers of one kind should be placed together, and in rotation, so that the onlooker can see that the store carries a full line of the articles shown.

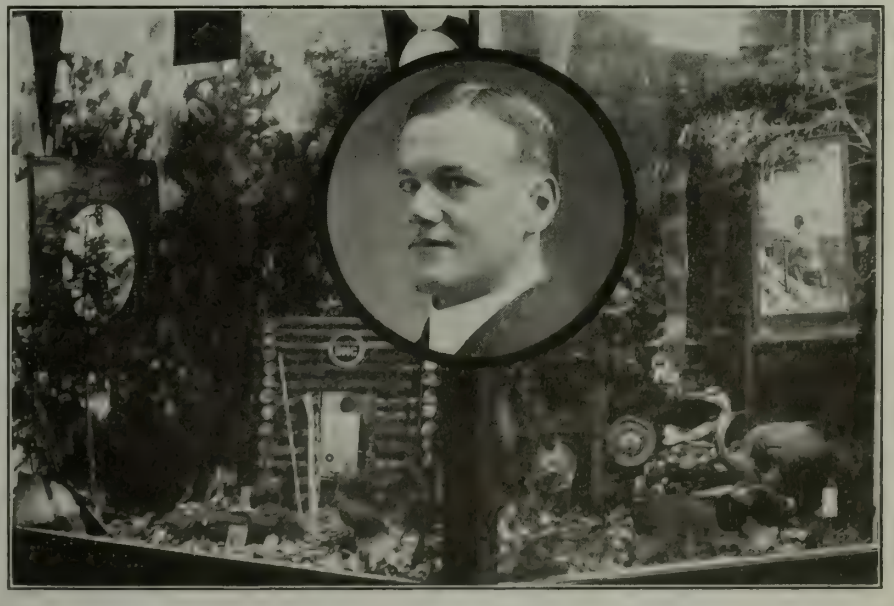
Do not overcrowd a window, but at the same time, show a sufficient quantity, so that it will not look as though the stock is limited. It is important to impress on the public that there is a first class selection of everything in the store.

The writer of this article, Charles Byford, has been with G. A. Binns, of Newmarket, for some years, and has won a deserved reputation as a window dresser of much originality. He has won prizes at various times in the contests conducted by Hardware and Metal.

It is hoped to be able to present articles from other well-known window dressers from time to time in these columns. —Editor.

Price Tickets are Important.

Price tickets are an important factor in a window trim. If the goods are marked at the right price, the tickets cannot but help to bring more custom to the store. It is from the price ticket system that the benefits of window dressing are derived.



Sales are repeatedly traced by this means, for customers can readily see how much an article is. They more often buy when they know how much they have to pay. Otherwise they might not bother to ask, thinking it would be too much. When a customer enters and says "I want to look at those $2.50 carvers" (naming article in window), you know that the window display has been responsible for bringing the customer in.

Realism in Display.

I am a firm believer in realism in window displays—realism and originality. Have your windows different from the rest and possessing some quality which will not only draw people to look, but give them something to think and talk about.

Last fall, during fair week, I designed a hunting window. I made it as realistic as possible, believing that the people at the fair, who were out for a holiday, would be more apt to give attention to a display of that kind than to an arrangement of store goods, no matter how creditable it might be. When people are out for pleasure, the window dresser who desires to catch their attention must have something designed to give pleasure.

In the background I placed a log cabin, with the door open, so that one could see the table set within. There was a light inside, and at nights this was turned on. At one side—not very clearly shown in the photograph—was a rockery, made of large stones, and moss. A stream of water trickled over the rocks and ran in a direct course to the front of the window. The water was brought up from a water pipe at the rear, and its bed consisted of a half piece of conductor pipe, but none of these "inner works" appeared on the surface. The use of moss and leaves made the stream look quite rustic and

Hunting window display trimmed by Chas. Byford—A description is given in the article—Picture of Mr. Byford is inserted.

natural. Goldfish had been placed in the water to give a still further touch of nature. On all sides were stuffed animals—deer, bear, fawn, porcupine, grouse, raccoon, crane, wild duck and even a snake curling over the stones. The idea that the animals were attracted to the "watering place" was made quite apparent. A camp fire added the final realistic touch.

The results aimed at with this display were achieved. All who visited the fair came to see the display. It was talked about a great deal, and advertised the store far and near.

To Photograph a Trim.

I may say in conclusion that the best method I have found to take a photo of a window trim is to turn out all the lights in the store and have plenty of lights in the window and let the photographer expose it for 3 or 4 minutes. If there is a good background there will be no reflection.

English Manufacturers Touring Canada

Representatives of Prominent Old Country Firms are Making a Trip Through the Dominion to Study the Opportunities of Developing This Market for British Goods — Many Hardware Firms Represented—The Itinerary.

Sixty-five prepresentatives of English manufacturing houses are now in Canada, having come over to see the Dominion from coast to coast, on a tour organized by The Financial News, of London. Among the visitors are managing directors of gigantic concerns, members of boards of directors, engineering experts, and even head salesmen. The purpose of the expedition, while not definitely worded, is undoubtedly to see the opportunity which Canada offers for the marketing of more English goods. The trip may have a great influence on the hardware field, as many connected with the line are in the party. Among the hardware firms represented are:

Vickers, Ltd., Sheffield, Explosives.

Electric and Ordnance Accessories, Birmingham.

Osram Lamps, Ltd., London.

Robertson, Electric Lamps, Ltd.

Blundell, Spence & Co., Ltd., Hull, paints, colors, varnish, oil.

G. B. Kent & Sons, Ltd., London, brush manufacturers.

Broughton Copper Co., Ltd., Manchester, copper manufacturers.

E. & W. Lucas, Ltd., Sheffield, spades and implements.

G. W. Goodchild & Partner, London, edge tools, etc.

Armstrong, Stevens & Sons, Ltd., Birmingham, bolts, nuts, screws, forgings.

The itinerary arranged is very full, and since it will be of interest to many who wish to see some of the party, it may well be given here:

Leave Liverpool, Tuesday, May 31; arrive Quebec, Thursday, June 6; leave Quebec, Friday, June 7, 9 a.m.; arrive Amherst, Saturday, June 8, 4 a.m.; leave Amherst, Saturday, June 8, 7 a.m.; arrive Truro, Saturday, June 8, 9 a.m.; arrive Kentville, Sunday, June 9, 3 a.m.; leave Kentville, Sunday, June 9, midnight; arrive Halifax, Monday, June 10, 5 a.m.; leave Halifax, Monday, June 10, 7 p.m.; arrive Sydney, Tuesday, June 11, 7 a.m.; leave Sydney, Tuesday, June 11, 4 p.m.; arrive Moncton, Wednesday, June 12, 7 a.m.; leave Moncton Thursday, June 13, 7 a.m.; arrive St. John, Thursday, June 13, 10 a.m.; leave St. John, Thursday, June 13, 10 p.m.; arrive Fredericton, Friday, June 14, 2 a.m.; leave Fredericton, Friday, June 14, 5 p.m.; arrive Montreal, Saturday, June 15, 8 a.m.; leave Montreal, Sunday, June 16, 10 a.m.; arrive Ottawa, Sunday, June 16, 1 p.m.; leave Ottawa, Monday, June 17, 10 p.m.; arrive Toronto, Tuesday, June 18, 7 a.m.; leave Toronto, Wednesday, June 19, midnight; arrive Niagara, Thursday, June 20, 3 a.m.; leave Niagara, Thursday, June 20, noon; arrive Hamilton, Thursday, June 20, 2 p.m.; leave Hamilton, Thursday, June 20, midnight; arrive London, Friday, June 21, 4 a.m.; leave London, Friday, June 21, 2 p.m.; arrive Brantford, Friday, June 21, 4 p.m.; leave Brantford, Friday, June 21, 8 p.m.; arrive North Bay, Saturday, June 22, 6 a.m.; leave North Bay, Saturday, June 22, 6 a.m.; arrive Cobalt, Saturday, June 22, 10 a.m.; leave Cobalt, Saturday, June 22, 4 p.m.; arrive North Bay, Saturday, June 22, 8 p.m.; arrive Port Arthur, Sunday, June 23, 8 p.m.; leave Port Arthur, Monday, June 24, 7 p.m.; arrive Winnipeg, Tuesday, June 25, 9 a.m.; leave Winnipeg, Wednesday, June 26, 8 p.m.; arrive Saskatoon, Thursday, June 27, noon; leave Saskatoon, Thursday, June 27, 8 p.m.; arrive Edmonton, Friday, June 28, 8 a.m.; leave Edmonton, Friday, June 28, midnight; arrive Calgary, Saturday, June 29, 7 a.m.; leave Calgary, Saturday, June 29, 8 p.m.; arrive Banff, Saturday, June 29, 11 p.m.; leave Banff, Monday, July 1, 9 a.m.; arrive Glacier, Monday, July 1, 3 p.m.; leave Glacier Monday, July 1, 6 p.m.; arrive Vancouver, Tuesday, July 2, noon; leave Vancouver, Thursday, July 4, 10 a.m.; arrive Victoria, Thursday, July 4, 2.30 p.m.; leave Victoria, Saturday, July 6. 2.15 p.m.; arrive Vancouver, Saturday, July 6, 6.45 p.m.; leave Vancouver Saturday, July 6, 7.30 p.m.; arrive Laggan, Sunday, July 7, 10 p.m.; leave Laggan, Monday, July 8, midnight; arrive Calgary, Tuesday, July 9, 4 a.m.; leave Calgary, Tuesday, July 9, 11 p.m.; arrive Lethbridge, Wednesday, July 10, 5 a.m.; leave Lethbridge Wednesday, July 10, noon; arrive Medicine Hat, Wednesday, July 10, 3 p.m.; leave Medicine Hat, Wednesday, July 10, 10 p.m.; arrive Moose Jaw, Thursday, July 11, 7 a.m.; leave Moose Jaw Thurs., July 11, noon; arrive Regina, Thursday, July 11, 2 p.m.; leave Regina, Friday, July 12, 10 p.m.; arrive Brandon, Saturday, July 13, 7 a.m.; leave Brandon Saturday, July 13, 2 p.m.; arrive Winnipeg, Saturday, July 13, 6 p.m.; leave Winnipeg, Sunday, July 14, 11 p.m.; arrive Montreal, Tuesday, July 16, 11 p.m.; Montreal, Wednesday, July 17; Thursday, July 18; Friday, July 19, embark, 10 p.m.; sail from Montreal or Quebec, July 20; due Liverpool, July 27.

The following items were taken from the files of June 11, 1892:

"The Standard Oil Co., the largest trust in the United States—yet in healthy existence in a changed form merely, notwithstanding its nominal dissolution some time ago —is no doubt somewhere in the background of this movement to permit the importation of petroleum in bulk. Canadian consumers are naturally on the side of it, as it means cheaper oil to them."

(Editor's Note. — Trusts apparently have as many lives as cats. It is significant of the longevity and elusiveness of trusts that Standard Oil is to-day in exactly the same position as it was twenty years ago. Its dissolution has again been ordered.

* * *

"Wood, Vallance & Co., Hamilton, are going to erect a four-storey brick warehouse at the southeast corner of King William and Hughson streets."

(Editor's Note.—The same premises in enlarged form are occupied to-day by Wood, Vallance & Co.)

Hardware Store Publicity

Chapter 10.--- Change Copy Regularly

This chapter will deal with a phase of retail advertising which is old and yet ever new. It is old from the fact that in the past constant references have been made to the subject. It is new because new evidences of the practice concerned are coming to light daily.

Whenever you pick up a newspaper some advertisement strikes you with a sense of monotonous familiarity. "That ad. has been running so long that I'm sick of the sight of it," you say. "Can't that fellow get up anything new?" The continued repetition of the same copy or cut becomes tiresome to readers. They recognize it at a glance and studiously avoid it. If they give any thought whatever to the matter, it is to wonder if it is lack of ideas or negligence which causes this merchant to inflict his worn-out advertisement on them so often.

Again, in glancing through a newspaper the eye frequently encounters something which causes one to stop. "I must be mistaken," you think, believing that your eyes have deceived you. "I can't have read that." But yes, there it is, in bold type. It may be boiling hot outside but this is what stares at you from the page you are holding in front of you:

Skates! Skates! Skates!

Now that winter has come with its frost and snow, all young people will be needing a pair of skates. We have them of every size and price.

Also on sale — Buffalo robes, warm mittens, sleigh heaters, etc.

This is not such an exceptional case as it may seem. Pick up almost any country weekly and an equally ludicrous ad. will reward your search through its columns. The writer has some half dozen specimens in front of him now, all of which were clipped from newspapers within the last two or three weeks. One reads as follows:—

THE FALL IS STOVE TIME.

The winter will soon be here and you must buy that stove before the cold weather arrives. Don't delay. It may cost you dear.

The ———— heater is the best on the market—and so on.

Certainly no objection can be taken to the fact that the space is devoted to the subject of stoves, but the references to fall and winter let the cat out of the bag. It is quite apparent that the copy was prepared last fall. "What a careless fellow that hardwareman is," people in that locality will say. "If his methods are as bad in other ways, he certainly won't get my trade."

Another one refers to Christmas gifts. "Christmas is coming," it very truly but not exactly pertinently remarks. "Shopping done early is done well. Get down now and see about your holiday purchases."

A third goes with much detail into the question of sleighs and toboggans. A fourth deals with paint, asserting that "Winter will soon be over and you will want to usher in spring with a new coat of paint."

They all appear to have been pretty good ads. when they were first used. That much can be said for them.

Whether it is the negligence of the merchant which keeps these ads. running or whether they are "dead" and are "lifted" by the printer to fill in when he runs short of matter to fill up, it is impossible to determine. The fact remains that they appear and there can be no uncertainty as to the effect they produce. They serve as a black eye to the merchant in each case.

Change Copy Regularly.

One of the first essentials of successful retail advertising is to change the copy regularly. If it is necessary to use the same arguments and facts, tell them a little differently and rearrange the lay-out.

There are numerous reasons to impel this course. The first and foremost of course, is that best results can be obtained by that means only. Then the advertiser should consider that by regular changes of copy he gets the full worth of his space. Finally, if he desires to make his advertising effective, he must have his copy seasonable and that entails frequent changes.

It is particularly necessary for the hardwareman to keep his copy fresh. He has one hundred and one lines to sell and every article demands more or less attention from the advertising standpoint. No dealer has a more wide and varied stock than the hardwareman. He could run a different advertisement every day for a year and never mention the same article twice. If he allows an advertisement to run for an unduly long period, he focuses attention on certain articles at the expense of others. If, for instance, he were at the present time to devote his space for three weeks to lawn mowers, there would be sundry other lines which would suffer—garden tools, builders' hardware, screen doors, refrigerators, gas stoves, paint and so on. If he were to change the copy regularly, he could in the same space of time take up each one of these lines and the general volume of business would be improved accordingly.

Even firms who have one line only to sell find it incumbent on them to give variety to their publicity efforts. Look at the international advertising of the cereal food manufacturers. Each advertisement is different from the one that went before it. The same thought is suggested, the same arguments presented, but the whole ad is different. It attracts the reader from a new angle and he peruses it just as he did the preceding one.

If it is necessary to change so often where only one line is concerned, how much more necessary is it for the hardware dealer who has a whole storeful of goods clamoring for attention?

The Danger of Forgetfulness.

Most dealers realize the wisdom of frequent changes. They probably intend to look after the preparation of regular copy but they either forget or neglect the matter. It is not uncommon for them to leave it off until the last moment. If it happens to be busy just then, they dismiss the matter with the reflection: "I guess the old copy can run another day. It won't hurt me any." Perhaps not. But neither will it help him; and he is paying out good money on advertising so that it will help him.

The best way to correct this tendency is to plan your advertising ahead of time. Some prepare a series of ads. for each week, thus having the copy always well ahead of time. This insures best results in every way.

TURNING THE STOCK.

This question was taken up in Hardware and Metal in a recent issue. Some opinions received since will be of interest.

H. A. Bernier, Montreal, writes:—

"The question of how often a stock of hardware should be turned over, in my opinion, would depend on the class of goods sold and the profits derived from same. For instance, a stock of $10,000 turned three times would yield a gross profit of 20 per cent. As some lines are sold but three or four times and others as often as twelve times, I believe a retail store should have an average turnover of six times a year."

Thornton Bros., Bradford, write:—

"In our opinion a hardware stock should, at least, be turned over three or four times yearly, and a hardware stock which does not turn over this number of times is not paying."

THE GLASS SITUATION.

The threatened revolution in Belgium is being watched with anxiety by all interested in the glass industry. Canada depends upon Belgium for a large percentage of her glass imports and anything which might interfere with shipments from that country would seriously affect conditions here.

The latest reports from that country are reassuring, but there is no certainty yet that the unrest has been quelled. There can be no doubt that, if the threatened upheaval results, the glass industry would be crippled for a time at least. Whether the manufacturers would be able to fill their contracts in the face of such a development would be problematical, although Canadian importers are inclined to think that their shipments for the summer at least would not be seriously interfered with.

It is reported that present stocks in this country are not large enough to bridge over any lengthy delay in shipments from Belgium, so that the situation there is fraught with grave possibilities. Importers and jobbers acknowledge that they are anxious, but they are inclined to look on the hopeful side.

MORE OF THE TRANSPORTATION TROUBLES.

With talk of scarcity in many manufactured products already being heard, it is not good to discover that the transportation difficulties are yet far from being relieved. Indeed, the manager of one enamelware concern lays the entire blame for the present shortage upon the carrying companies.

"There is no real shortage of enamelware yet," says this man. "The appearance of a shortage is given, that is, all buyers are not getting prompt delivery, not because we are not shipping the goods promptly, but because they are not being promptly delivered."

Instances a-plenty of slow shipment might be quoted. A shipment takes two weeks, exactly, to reach Montreal from London, Ontario. Goods loaded at Port Hope reach Ottawa 15 days later—the trip is actually one which would take a night. Goods were shipped to Montreal from Ottawa a fortnight ago. They have arrived, and upon inquiry, those to whom they were sent have found that it took the shipment three days instead of three hours to come from the Capital to the Royal City, and that it took seven days to get them from the Montreal freight yard to their destination in the city.

This transportation problem is one of moment. Conditions will undoubtedly become more grave before fall. What is to be done is a question which may not easily be answered, but it would appear that this is a question which might well be taken up at the various hardware conventions—a question which might be discussed by retailers and manufacturers together.

RECALL YOUR OWN NEWLY-WED DAYS.

Tact, someone has said, is the art of putting one's self quickly in another person's position.

This being so, salesmanship and tact are closely allied, for there is nothing like putting himself in his customer's position to enable a dealer to discover a real need and sell the goods to fill it.

It is well worth the dealer's while, at this time, to put himself in the position of the many who are starting housekeeping. He needn't go back in his mind to that day when he asked the old gentleman, and he said he could have the girl; but he must try to remember what was wanted when the honeymoon over, he and his bride returned to the house which was to become a home. If he remembers what had to be bought then, he will know what the newly-weds will need now; and by advertising these things, by displaying them, and by making sales of them he will draw the newly-wed trade—a trade which is perhaps the most valuable of any, for it represents not a single sale, but a series of sales throughout many coming years.

BE EARLY IN THE FIELD.

It is an old saying and a true one, that the early bird catches the worm. The first traveler around gets the order, all other things being equal. The first applicant to appear has the best chance of landing the vacant position. The dealer who first attracts the attention of the public to a certain line gets the cream of the trade.

It is a great advantage to be the first in the field. It is possible to become firmly intrenched before the opposition appears. The merchant who is sufficiently wide-awake to capture the early orders is generally able to retain the biggest share of the trade right through the season.

In some hardware lines, stoves particularly, it is absolutely necessary to get into the field early. The bulk of the trade centres in the fall, but the dealer who desires to make the most of it must begin his campaign early in the summer and maintain it steadily throughout. As pointed out elsewhere in this issue, the average person does not buy a stove on the spur of the moment. Considerable thought is given to the matter before the deal is closed. When a man intends to buy a stove in the fall he gives some attention to the subject of stoves for several months before that. While the dealer may not sell many stoves during the summer, he has a splendid opportunity to arouse interest among those who will be in the market for stoves in the fall; an opportunity which he cannot safely neglect.

It is wise to get into the field early; wiser still never to leave it.

PEARL-HANDLED GOODS ADVANCE.

Reference will be found elsewhere in this issue to the fact that cutlery with mother-o'-pearl handles has advanced in price. This is attributable to the rapidly increasing scarcity of pearl shell and a resultant increase in value.

Mother-o'-pearl has come into great favor of late years, and, as material for handles of all varieties of knives and carvers, is displacing ivory to a considerable extent. The demand among the rich and well-to-do classes in the United States for the most expensive things in every line has created a popular vogue of cutlery with pearl handles, heavily and richly mounted in silver. To satisfy this demand, American cutlers have been buying a large share of the mother-o'-pearl supply, and the price has gone up in consequence.

Manufacturers are reported to have been reluctant to put up the price of their ware. However, conditions have forced an advance and rumor has it that a still further increase may be expected before the end of the year.

POINTED EDITORIALS.

Paint window displays bring far reaching results.

* * *

You can usually tell a poor clerk—but you can't tell him much.

* * *

The early closing movement is gaining headway. Progress is slow, but sure.

* * *

The poet to the contrary, they will not serve many who only stand and wait.

* * *

What percentage of your earnings must be credited to the lower floor of your store?

* * *

White lead is one step nearer the dizzy level of 8 cents, predicted by some a few weeks ago.

* * *

Good tools are worth having. There's nothing that makes a man fly off the handle like a hammer head that does.

* * *

Would it not be possible to make the ground floor advertise the one above, without doing any harm to the lower?

* * *

The British manufacturers could not have struck Canada at a more propitious time. We are riding on the crest of a great wave of prosperity.

* * *

The dealer who does not turn his stock four times a year is not doing a profitable business; unless the reason for the slowness of his turnover is that he charges an unusually high rate of profit.

* * *

The hardwareman who is advertising the fact that "Christmas is coming" is stating an undoubted truth. But is it worth while paying advertising rates to announce the fact? Wouldn't it be better to give the public a few home truths about lawn mowers, tools, vacuum cleaners and paint?

* * *

Pearl-handled cutlery has advanced in price, the advance being due to the fact that demand has increased sufficiently to create a scarcity of material. People are clamoring for and paying for the very best nowadays. Even the prudent farmer, who was one time content with pewter, now pares apples with a pearl-handled fruit knife.

Spying Out the Land

A PARTY of English manufacturers are at present touring through Canada for the purpose of "sizing up" the possibilities of this market for British-made goods. The itinerary of the party will take them from coast to coast, and will give them an opportunity of visiting all the more important centres.

The object of this cross-continent jaunt is one in which all Canadians will heartily concur. Canadians have quite rightly felt that the British have not held a true conception of the importance of this country hitherto. While the old-time impression in John Bull's mind that "Our Lady of the Snows" was an icebound land of little commercial value and somewhat of a white elephant in other respects, has long since been dissipated; while it has gradually been brought home to the British people that Canada is a country of wonderful possibilities; the conception still held is inadequate and far from comprehensive. The truth of the matter is that one has to see Canada to appreciate the country. There are (who knows?) thousands of Canadians who have almost as befogged a conception of their own land as that held by people beyond the seas, never having strayed beyond their own section or county.

The British manufacturers will see a country in the throes of rapid expansion. They will stop at stations crowded with newly-arrived immigrants. They will see whole towns in course of construction and find the older-established centres actuated with an activity which might be termed feverish were it not that that term implies lack of permanence. Getting beyond the settled parts, they will find new railroad lines being energetically pushed ahead, and opening up vast new territories of great agricultural possibilities. They will see hardy pioneers breaking the land many miles north of what was once supposed to be the "ultima thule" of human habitation, where they will raise the very best grades of No. 1 hard.

The trip should rob the visitors of any doubts which they may have felt as to the importance and future of the Dominion of Canada. They will see such tangible proofs of the great potentialities of the land that it will be hard for them to retain a grain of skepticism. Faults they will doubtless find. Conditions far from perfect will manifest themselves. But conviction cannot help but grow in the tourist who sees Canada from coast to coast with an observant eye and an open mind.

That good will result from the tour is certain. British manufacturers, with some bright exceptions, have been either timid of or indifferent to the Canadian market in the past. They have not taken the active steps to cultivate the close acquaintance industrially which may be expected to result from the personal observations of the members of the party. That the manufacturers will carry home the belief that the Canadian field is worth aggressive exploitation is a safe assumption, and the industrial connection between Great Britain and this country in future seems equally assured.

It is interesting to note that many of the largest British manufacturers of hardware and kindred lines are represented in the party.

Sell only good goods to the newly-weds. Satisfied, their trade is secured for the coming years. Dissatisfied, they will avoid your store. The early purchases of the bride and bridegroom are their tests of the neighborhood's retailers.

One section of the Upstairs in Sumner Company's store. It will be seen that there are displays which will draw women especially to this upper storey.

Rapid Increase in the Number of Articles Which Must be Carried by the Up-to-date Hardware Man Makes the Utilization of the Upper Storeys Necessary—Many Dealers Are Afraid that Customers Would Not Go Upstairs—This Has Been Found the Case by Sumner Company, of Moncton—They Have Taken Steps to Attract Trade to the Upper Storey.

After all, large and small are really comparative terms. Have you ever noticed how huge is your conception of the yard in which you used to play as a little boy? It is a shock, after an absence of years, when you see this yard again. It appears so small. The yard, of course, has not changed in area—but then it was compared with small things—now it stands contrasted with lawns of real magnitude.

Much the same is true of stores. One may be large as compared with others, and yet it may be small for the trade carried on within it. So, even from a large store, there may be secured pointers for those who are doing business in really small buildings, as well as for those who are doing a big business in a place hardly large enough for this.

Space-Saving Devices.

The establishment of Sumner Company, Moncton, N.B., is far from small. It must indeed be ranked among the large hardware stores; and yet those most closely connected with it do not regard it as large. They feel the need of more room, as every healthy concern should. This need has caused the introduction of space-saving and space-utilizing schemes which will give useful hints to other dealers who are facing a like need of expansion—dealers who are doing business in stores of really small dimensions, and dealers who are carrying on their operations in what from the outside appear spacious quarters.

One floor stores are undoubtedly the cause of much crowding at the present time. There is a feeling that people will not go upstairs to buy, and that, therefore, samples of everything, or of practically everything, must be kept on the ground floor.

Earning Powers of Ground Floor.

Even department stores, which shoot many storeys into the air, have some such idea as have the "Ground Floor Dealers." The department store managers, as most people know, charge their department managers so much rent for the space they occupy, and deduct that amount before they credit the department with any earnings. Upon the departments which have ground floor space they put a high rent—three or four times as much as is charged the departments which do business in the upper storeys. They regard the earning power of the ground floor as three times that of the upper storeys.

Undoubtedly there is good ground for such a belief. Past earnings have shown the ground floor to be of the greatest value. It would seem that it always will be, yet this is no reason why the ground floor should be the only one used. Suppose the lower storey is worth three times as much as the upper, from a money-making standpoint, why should the upper storey be neglected? If, for instance, $60,000 worth of business could be done on the ground floor, it would seem foolish to throw away $20,000 worth on the second storey just because a $60,000 turnover could not be secured there, too.

Danger of Confusion.

Moreover, where only one floor is used the natural desire is to get something of everything on that floor. The result is often a jumble, which may mean that less business will actually be done than would be done were fewer goods better shown.

Many dealers who have avoided the use of their upper flats are shortly going to take to these. They must. The hardware business to-day is not what it was a few years ago. Alf. Outram, of Port Hope, was saying a little time ago that while he used to carry something like 5,000 lines—counting everything—he must now have 23,000 lines in his store. There is a general broadening. Specialties have to be handled. There are more classes of the one article than there used to be, and they all take room. Even if only samples are shown—which is not wise with every class of goods, since it prevents an effective display—a great deal of space is needed.

People Will Go Upstairs.

No, the upper flats must be utilized; and, fortunately, this necessity need not be regarded with too great trepidation. It has been shown that people will go upstairs—not perhaps half those who enter the store, but still many will go to the second storey, and those who do take the trouble are the select buyers. A man's business does not so much depend upon the number of people who come to his store, as upon the class of people. It is buyers, not persons, who are wanted, and it is the buyers who go upstairs—the people who are interested in some special line which they know they will find up there.

Here though is the vital point. It is necessary to let the people downstairs

know what there is upstairs. Only thus will many be induced to make the trip.

It is this necessity which has been born in mind by Sumner and Company. It is here that this firm has a hint to offer many other dealers. This is not the only suggestion, but it is one which will appeal to many, and which will enhance the value of many a store.

Believers in Signs.

There is no elaborate scheme adopted in this Moncton establishment. Just a straight-forward business method of securing attention. As will be seen in one of the accompanying illustrations, there is a large sign placed upon a pillar, right near the main entrance. All who enter must see this, and upon the sign is this wording:

STOVES
Kitchen Furnishings
Tin Ware
Enamel Ware
UP STAIRS.

Elsewhere there is a notice stating that fine china may be had upstairs, and near the stairway—which is well situated—is another sign much like that near the main entrance, setting forth some of the lines which are to be seen upstairs.

It will be noticed that some of the articles sold on the upper storey are those which are in daily demand. Tin ware, enamel ware, kitchen furnishings—these are regularly sought by women customers, who thus get the habit of going to the second story, and who thereby become acquainted with the fine china, the brass goods and the other lines to be secured there.

Whether these goods would sell better were they shown downstairs, can not, of course, be definitely stated. There is a chance that they would—were they given the same space. But the sales upstairs have been exceedingly satisfactory. Fred W. Sumner, the President, is quite certain that the upstairs department has brought good returns. He would like to show everything downstairs, but that is simply out of the question. There are too many lines. Mr. Sumner is quite convinced that it is better to have a good display downstairs and upstairs, than to have a confused display on the ground floor—a veritable Irish stew display—and nothing at all on the second storey.

Apart from the use made of the second storey, and from the means taken to draw the serious buyers to that storey, the store of Sumner Company has a message for the progressive dealers.

The illustration of a part of the ground floor shows not only some fine displays of tools, of silverware and cutlery; it not only gives a hint of the carefully arranged paint department, and the well sampled builders' hardware, but it also indicates the use which is made of Manufacturers' Posters. These are displayed near the articles to which they refer—not in such great quantities that they give a confused appearance to the store, but in a way which hitches the article there displayed to all the advertising which the manufacturers have done. People coming to the store and reading those signs know that the articles being sold them are good articles—articles of which they have read, and for which they have felt a need. These signs make them more ready to buy.

In the illustration showing a part of the store's upper storey the devices used to display a wide stock without confusion are apparent. China and cut-glass has a place upon the shelves, and upon specially made stands near the store front. Chafing dishes, brass ware and copper ware, too, have tables and stands to themselves, and the kitchen goods are so arranged that a woman looking for a special article is almost certain to see something else for which she will feel a need.

Some of the modes of display used here might be out of the question in certain stores. That is not of vital importance, for from these very methods—impossible as they may be for his establishment—the enthusiastic dealer may secure hints.

But all may well consider the methods adopted by Sumner Company for drawing attention to the goods displayed upstairs. There are many one-storey hardware stores to-day, but their day is passing. Upper storeys will be opened more and more, and the question of drawing the people to these will be one of great moment.

View of Sumner Company's store near the main entrance. Note the sign telling of the goods to be found Upstairs. The use made of Manufacturers Posters is also shown here.

Handling the Builders' Hardware Trade

The Importance of This Department of the Store — People are Now Demanding a Higher Quality of Hardware — Salesmen Should Give the Subject Close Study — The Use of Estimate Sheets in Figuring Contracts — Losses Avoided in That Way — Value of Display.

The high cost of living, or the cost of high living—whichever it may be—has wrought radical changes in many lines. People have come to think there are things they cannot do without which formerly they regretfully left to the rich, who could afford them. This is true of all things—food, clothing, recreations, homes. The very best of everything is now demanded.

This has had a marked effect on the sale of builders' hardware. It is now accepted as a foregone conclusion that the new home must have the very latest "finishings" in the shape of door knobs, lock sets and push buttons. People who once thought a porcelain knob plenty good enough, now insist on a Renaissance or Gothic finish. Even the citizen who builds his modest home on the time plan does not believe in scrimping when it comes to the hardware.

It goes without saying that builders' hardware is decidedly one of the most important departments of the hardware store. The dealer should give considerable attention to this department, particularly at this time of the year, when building operations are pretty well under way. From now on there will be a steady call for builders' hardware.

Make Study of Subject.

The subject has widened appreciably of late years. The modern house is not fitted out with hardware in a haphazard manner. The door fixtures must be strictly in accordance with the general plan of the house. For instance, if the plan of architecture partakes of the ornate French style of the eighteenth century, Louis XIV. hardware is in order. If the house is of the Colonial style, there are types of hardware which will "match." It would not do to put hardware designed to match architecture of the Elizabethan era into a typical dwelling of the 1912 model.

The study of hardware has, therefore, become more complex. A higher order of salesmanship is called for. It is a wise plan for the dealer either to acquire a pretty extensive knowledge of the subject himself or to have at least one member of his staff thoroughly conversant with everything pertaining to it. All members of the staff must, of course, be sufficiently versed to sell the stock intelligently, but at least one member should be in a position to give what might be termed "expert advice" to customers in the matter of house fittings. The average person has little knowledge of the various styles and needs the guidance of someone who does.

The salesman, who thoroughly understands his work, will ask his customer first what size the house is, how it is built and how laid out. He will then be in a postion to make suggestions. "A bronze finish will tone in well," he remarks. "I would recommend it to you ahead of the lighter finishes for this house." He is able to explain why the bronze finish is best, and this convinces his customer. The house, when fitted up, looks better than it would had the purchaser been allowed to make his own selection. Satisfaction is ensured in that way.

To know when to recommend plain and when ornate styles, when to push the very best quality goods and the latest specialties, calls for a knowledge of hardware requirements which can only be acquired by the closest observation.

On the Ground.

It is quite as important to be "on the ground." Builders' hardware trade does not always come to the dealer. The dealer must, therefore, go out after the trade. In a great many cases, the selection of the hardware is left with the builder or the architect and, being busy men, they are likely to place the order with the first dealer they get in touch with, quality and prices being right. This is the custom, because owners are in the habit of leaving everything of a detail nature to the architect.

However, the interest of owners can be aroused to such an extent that in every case they will elect to personally select the hardware. The method for the dealer to pursue in arousing this interest is to make a personal call on the owner, taking along samples or a catalogue. He may find that the owner has stipulated for the best, but has not expressed any preference as to style or pattern. The man who is building a house can always be interested in anything pertaining thereto, and the dealer will not find any difficulty in getting his attention riveted to the builders' hardware. The owner will soon decide what he likes best, and will instruct the architect or builder as to his wishes. Naturally, the dealer gets the order.

This will work out in practically all cases where the order has not already been placed. It pays, of course, to call on the architect and builders also; but, in the opinion of the writer, to call on the owners is to get sure results.

Watch Building Work.

In order to get on the ground early, the hardwareman should keep closely in touch with real estate and building news. This can be done in numerous ways. Some dealers carefully clip out all references to building operations from the local newspapers and follow up the information contained therein, carefully filing the clippings. Others depend on the building permits, but this method is not to be entirely depended upon. Many permits are not filed at the city hall until after the building is almost compelted.

The plan followed by a Northwestern Ontario dealer in this connection is worth recounting. One of his staff makes a regular patrol of the place. As soon as an excavation is begun, he makes it his business to find out what is to be built, together with the names of the owner, architect and builder. Calls are then made on all the interested parties and orders solicited for builders' hardware and other lines as well—tar paper, roofing, paint, etc. This system gives the dealer an opportunity to figure on practically every building erected.

Outside Salesmanship.

The "outside salesmanship" idea is found particularly effective in pushing the sale of builders' supplies. Some dealers—their number is becoming smaller all the time—do not believe in canvassing outside the store for trade. With some it is prejudice, with others just indifference. The objections which they urge do not hold good, however, when builders' hardware is in question, for it has been proven beyond all cavil that canvassing not only results in bigger sales, but improves the quality of the demand. A personal talk very often brings the owner to purchase a good quality of hardware, where otherwise an order for cheap goods would have gone through.

Dealers in all parts of the country are now adopting the canvassing idea, and

the writer has yet to meet one who has not found it profitable.

Have Estimate Sheets.

Figuring on contract work requires close attention. The "ready reckoner" is a fairly common type—the man who makes a cursory explanation of a building and gives a figure on the spot. This practice is dangerous. The ready reckoner is almost certain to forget an item or two and he thus figures short on the total.

The best method is to have estimate and contract sheets to fill out. The dealer enters on a sheet every article which he will have to supply, and marks the cost price down. He then knows how much it is going to cost him, and can fix his price accordingly.

A good form for a contract sheet is as follows:

At the top have blanks for filling in the date, owner's name, location of building, contractor's name and address and the name of architects. Have the space ruled off into seven sections. In the first section put the location of the door, window or room where each article on the list is to go. Second, comes the quantity; third, the article; fourth, the finish; fifth, the cost; sixth, the selling price, and seventh space is reserved for remarks, with reference to the various items. An entry would read thus: Hall to parlor—1 set D. S. locks, O. B., 6964—$4.10—$5.10—1¾-inch door.

Each room and door would be taken up in turn, and every lock, push button, floor hinge, door check, push plate, mortise bolt, transom lift, sash lock and lift would be accounted for. Nothing would be forgotten and the dealer would be certain that he was going to make a profit.

Keep on File.

These sheets serve another purpose. They should be prepared in duplicate, and copies kept on file for future reference. In figuring on other contracts, the dealer will find it very handy to be able to refer back to the sheets he has on file. Not only will he be able to check over his list of articles, but price comparisons will also be found valuable. Mistakes will often be avoided in that way.

The sheets can also be used to good purpose in checking over deliveries.

The Margin of Profit.

In figuring a contract price, many dealers are too prone to consider the margin above the cost price of their goods as profit. For instance, of goods are sold for $40, which cost the dealer $30, he considers that he has made $10 profit on an investment of $30, or 33 1-3 per cent. This is, of course, erroneous. Overhead expenses must be taken into account here as in all other departments. If it costs a dealer 20 per cent. to carry on business, he must clear that margin on his selling price before he begins to realize and profit. Furthermore, the profit and cost of doing business should be reckoned on the selling price, and not on the cost price. To illustrate, suppose that in the case cited above the dealer's overhead expenses total 20 per cent. of the yearly turnover. If he sells for $40 goods which cost him $30, he has cleared 5 per cent. net profit. Figure it out for yourself.

Featuring the Stock.

Another important consideration is the proper display of builder's hardware lines. In the larger stores, a builder's hardware showroom is generally mentioned where it is possible to show each separate article as it would appear when installed. This system has a great advantage, as it enables the salesman to give his customers a practical demonstration. In the smaller stores, this cannot very well be done, but every effort should be made to keep the stock where it will show to best possible advantage.

The importance of window displays should not be lost sight of. Very effective window trims can be arranged with the use of the lines which come under the head of builders' hardware. People will show an immediate interest in a display of this nature, particularly those who are either engaged in or contemplating home building.

The writer ran across a window of this description recently which struck him as being particularly good. A varied assortment of lock sets, push plates, door clucks, etc., were shown in the window against a white background. At the back was a picture of a pretty suburban home. Attached to each article was a narrow strip of crepe paper drawn back to this picture. Over all was a large sign with the words: "The finishing touch to your home."

The dealer who designed this window assured the writer that he had traced direct results to it. People had entered the store and discussed builders' hardware with him as a result of studying the display, and in several of the cases he had supplied them with good sized bills of goods.

An Advance in Pearl Handled Goods

Scarcity of Raw Pearl Has Resulted in Putting Prices Up—Another Advance is Predicted Before the End of the Year—The Cutlery Situation in England is Marked by Labor Unrest.

The price of pearl-handled goods has materially advanced. This is not only due to the fact that the demand for pearl-handled cutlery has increased enormously of late years, but also to the fact that the prices for pearl shells have been coutinually advancing, and at sales in London, on March 12 and again on May 14 of this year, further advances took place.

Pearl handles have to a great extent taken the place of ivory, and have come into such general favor that a scarcity of the raw pearl has developed. The cutlerers report the difficulty they are having in getting supplies, is growing all the time. It has now developed to such a stage that it is affecting the price of the finished article.

The fact that labor is higher may have had some effect, but this is not regarded as one of the real contributing causes by those who are closely in touch with the situation.

Thomas B. Lee, hardware wholesaler, Toronto, states that the present situation can be traced directly to the growing shortage of raw material.

Further Advances.

Pearl cutters report and expect further advances before the end of the year, and in view of same, are declining to entertain contracts for more handles than their present stock of shells will cut or furnish.

The Cutlery Situation.

Reports from England are to the effect that there is a great deal of unrest again in the cutlery industry. For years wages were pretty low, and a large number of the experienced men went out of the business, seeking employment in other lines where the remuneration would be larger. The result has been a scarcity of skilled men. The scarcity is stated to be pronouced at the present time.

The men are now taking advantage of the fact that skilled help is hard to secure to press for higher wages. Advances have been made, but there is an agitation at present for another advance.

The labor unrest may not affect the cutlery situation, but handlers of cutlery in this country are watching the situation with considerable interest.

Leonard Mould has completed a four weeks' trip through the Maritime Provinces in the interests of the Glidden Varnish Co.

Complete Course of Sheet Metal Work

By L. W. KOSER

Prob. 16, plate 20, illustrates a proposition in geometry which comes very handy to the sheet metal draftsman.

This problem shows us how to draw an arc or curve through three given points or places, no matter where these points may be.

In Fig. 1, Prob. 16, ABC represents three given points, and we wish to draw an arc which will pass through each one of these.

For convenience we have shown these points equal distance from each other and in line, but the problem would be the same, if, for instance, A was close to B or C, or in any position whatever, for as previously explained the position of the points makes no difference whatever.

What we want to find is the centre for drawing the curve to pass through these three points.

In Fig. 2, ABC represent the three points.

Set the point of the compass at A, and with a radius equal to about ¾ of the distance between A and B, describe the arc 1-2, then with B as centre and the same radius, describe the arc 3-4, cutting 1-2, also describe 5-6, then with C as centre, describe the arc 7-8, cutting 5-6.

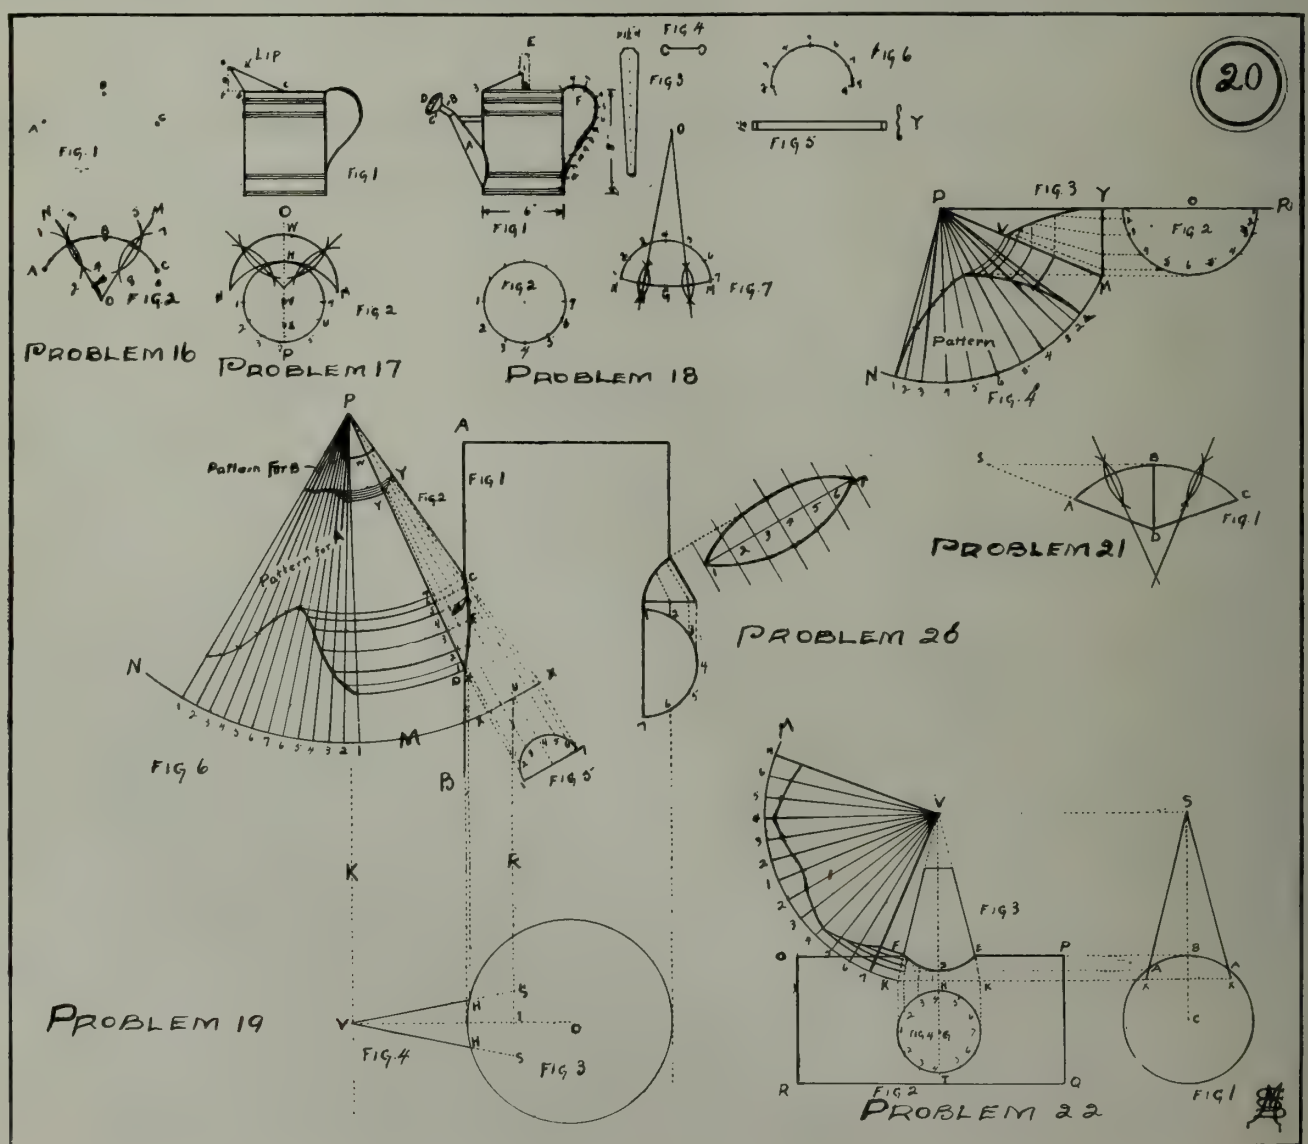
Through the intersections of the arcs draw straight lines, as NM, and where they meet, as the point O, will be the centre desired.

It will now be seen that the point O is equal distance from A, B and C. Therefore, if we set the point of the compass at O, and the lead at either A, B or C, and swing an arc, it must necessarily pass through these three points.

Get thoroughly familiar with this problem, as it is used in the next several succeeding examples.

In Prob. 17 we give a practical application of Prob. 16 in developing the lip for a tin measure.

First draw an elevation of the measure, as shown by Fig. 1.



Extend the top line, as shown by the dotted line Rb.

Then drop a line from the point a, as shown by a r; this is to get the height of the point "a" above the top of the can.

Next draw a vertical line as O P, and at any place on this line as "v" draw a circle the size of the can, and divide ½ of it off into equal spaces.

Set one point of the dividers at "a" and the other point at "r," and with the dividers thus set, transfer this space to the line O P, as shown by V X.

Set the point of the compass at X and the lead at the top of the circle at H, and describe the arc N M.

Lay off on N M the stretchout of one-half of the can.

Then set one point of the dividers at "a" and the other at "b" and transfer this space to the line O P, as shown by W H.

Then N, W, M, are the three points through which it is desired to draw an arc.

Apply the rule set forth for Prob. 16, and the pattern will be developed. Allow for flanges and burr.

In Prob. 18, Fig. 1 is a watering can, in which 1, 2, 3, represents the brest; A, B, C, D the different parts of the spout, E the top handle, and F the side handle.

To get the handle F, divide it into equal spaces and lay out a stretchout of same, make it the desired width at top and bottom. Notch the corners for turning around the wire, form to shape similar to Fig. 4, put in wire and rivet and solder to can.

To get the top handle E, draw a profile of same similar to Fig. 6, and lay out the stretchout as Fig. 5, form to shape similar to Y and Fig. 6, and solder to can. On large cans it is well to allow a flange to come down on sides of can for riveting.

To get the brest 1, 2, 3, set the point of the compass at 1, and the lead at 3, Fig. 1, and with any convenient point as centre, as G., Fig. 7, describe the arc NM. Lay off the stretchout of one-half of the can, as 1 to 7.

Then N, G, M represents the three points through which it is desired to draw an arc.

Find the centre O, as described for Prob. 15, and with O as centre, describe the arc NGM. Allow for flanges.

A REMARKABLE REVIVAL.

The American Metal Market says editorially:

Yesterday under the heading of "Our Curious Revival in Business," we discussed some of the features that seem to us to justify our calling the present revival in business in the United States a curious one. We dealt yesterday with metals. When we turn to the iron and steel situation we find a condition which it is no exaggeration to call remarkable. After an enormous business done, there is no appearance of letting up, no indication that the orders placed have not been for actual legitimate requirements, in fact, there is every cause to believe that if there is a falling off in new business, it is simply because the mills cannot take on any more orders for the deliveries required.

The situation of the U. S. Steel Corporation is illuminative, and we think conclusive, as the following which we believe to be actual facts, shows:

With nearly 6,000,000 tons of unfilled orders on their books, with their shipments for May the largest of any month in the history of the corporation there is in spite of this every reason to predict an increase in their unfilled orders for May of over 100,000 tons. If the present rate of the production of the corporation is continued, it would indicate their ingot production for 1912 may reach 17,000,000 tons, as compared with 12,753,370 tons in 1911, and 14,179,369 tons in 1910. The Gary mills are sold up for 10 months, and what most intimately interests the metal trade, their tin plate mills sold up for seven months. There will be no midsummer closing this year. This state of things has been the result of heavy and extensive buying by the railroads, and the necessities of the country generally. It has undoubtedly been fostered by the low prices at which the material was obtainable, but at the same time it represents a legitimate demand. There has been no speculation in the recent iron and steel movement. It is estimated that there are unfilled orders on the books for 100,000 cars, and negotiations for some 32,000 pending. We are informed every shipbuilding plant with the exception of one or two are unable to enter further orders, and it is well known the activity that exists in structural material.

NO MERGER OF SOIL PIPE INTERESTS.

Montreal, June 6.—A report has gained circulation to the effect that a merger of the soil pipe interests is to take place. This, it is learned, is incorrect. That such a thing has been talked of is not denied, but the six large concerns which were spoken of do not favor the proposal. "There has been talk," remarked one closely connected with the soil pipe industry. "There has been plenty of talk, but it has been on the part of a promotor. I do not hesitate to say that there will not be a merger."

Manufacturers are so busy trying to meet the exceptional demand which has arisen for soil pipe that they are not taking any great interest in anything outside. Certainly the merger proposal seems to have found little favor in their sight. As far as production goes it is learned that the pipe is being sold as fast as it can be made.

"We hope," stated the manager of a local concern, "that orders will ease off in a month or so, and that we will be able to get a little reserve supply with which to meet the heavy demand of the fall. If there is not this July quiet season I don't know what we will do. We are away behind now. To-day I have received seven telegrams like this," and the speaker handed over a yellow bit of paper bearing this message: "Out of 4-inch pipe. When are you going to ship?"

Hardware Letter Box

Stove Repairs.

P. McL. Cummings, Cobden, Ont.—"Can you tell me where I can procure repairs for the Bismark Stove No. 9--25, made by Chown & Cunningham?"

Communicate with M. A. Caswell, 380 Queen Street East, Toronto; Jas. Moir, 221 Queen Street West, Toronto.—Ed.

Annealed Wire.

Wells & Emmerson, Port Arthur, Ont.—"Who are the manufacturers of annealed wire in Canada?"

Laidlaw, Bale Tie Co., Hamilton; Steel Company of Canada, Ltd., Hamilton; Jas. Pender Mfg. Co., St. John, N. B.

TO HOLD DEMONSTRATION.

New Liskeard.—A demonstration of stain and varnish will be held in the store of Magladery Bros. on June 10, 11 and 12.

APPLY FOR CHARTER.

Application for incorporation has been made to Fredericton, N.B., by the following: J. L. McAvity, F. J. G. Knowlton, J. B. McLean, George and Thomas McAvity, to carry on a business in St. John under the firm name of McLean, Holt & Co., Ltd., with a capital stock of $150,000.

THE SUMMER TRADE.

Ottawa, Ont. — Under the heading, "Get Ready for the Hot Summer Days," J. P. and F. W. Esmonde are advertising a list of summer hardware lines, including lawn seats, verandah chairs, croquet sets, window screens, hose reels, screen doors, refrigerators, etc.

Grates.

The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, have issued their fortieth catalogue, devoted to all varieties of grates. It contains 111 large-sized pages, and shows an almost endless variety of grates, andirons, fire sets, dampers and ash dumps. The grates shown are of every style, from tile to the gas log variety. Portable grates are also shown.

Lesson 16--Course in Card Writing

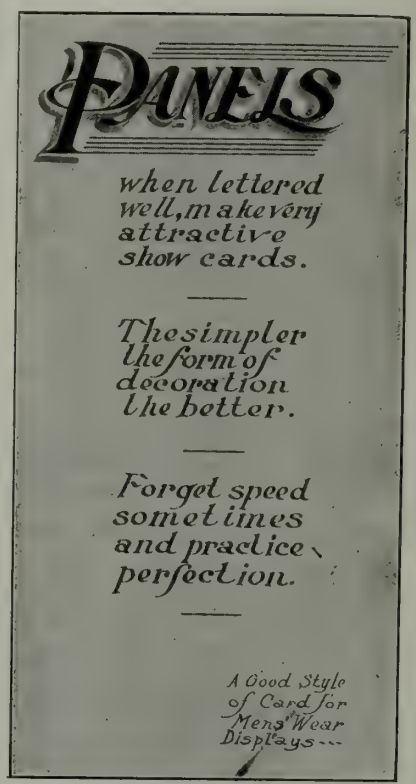
Deals With the Slant Lettering as Executed With the Square-Pointed Pen—A Speedily Made Letter, Used for Price Tickets and Show Cards and Readers.

By J. C. Edwards, Copyright, Canada, 1911.

AS with other slanting or italic letters, the slanting pen lettering is much more speedily made than the straight. This brings it in for a big share of use among cardwriters of today. For small, neat cards or price tickets this style of lettering is unequalled and is very effective and not altogether inornate when the eccentric lines are worked in nicely.

Eccentricities Not Necessary, But—

In glancing down the plate you will notice that a few of the letters are exaggerated to very good effect. Letters such as A, B, D, E, L, etc., may be made plain or as shown in the plate which, when nicely executed, add greatly to the relief of a card. Letters such as A, V and Y may also be given an eccentric or irregular touch without detracting from the legibility of the inscription. The right hand stroke of any one may be given a graceful, sweeping curve over the top of the rest of the word.



Similar to Brush Script.

The style of the short pen work is not unlike brush script in general lines, but varies some in details and the letters must never be connected as the script is, but a nice, uniform letter kept at all times, with the letters always on the same slant. Some practice will be required to get the letters to slant the same. Letters such as A, W, X, Y and V, that already having slanting strokes are the most difficult to get right; however, if you follow the plate and practice them there should be no difficulty.

The Panel a Pen Card.

A favorite card with stores of the better class is the long panel, and being long and narrow it is adapted to pen-lettering more than brush work. Pen lettering is neater than that made by a brush of a similar width.

The panel, when well lettered and an illuminated capital or a fancy corner piece used, makes an effective sign and

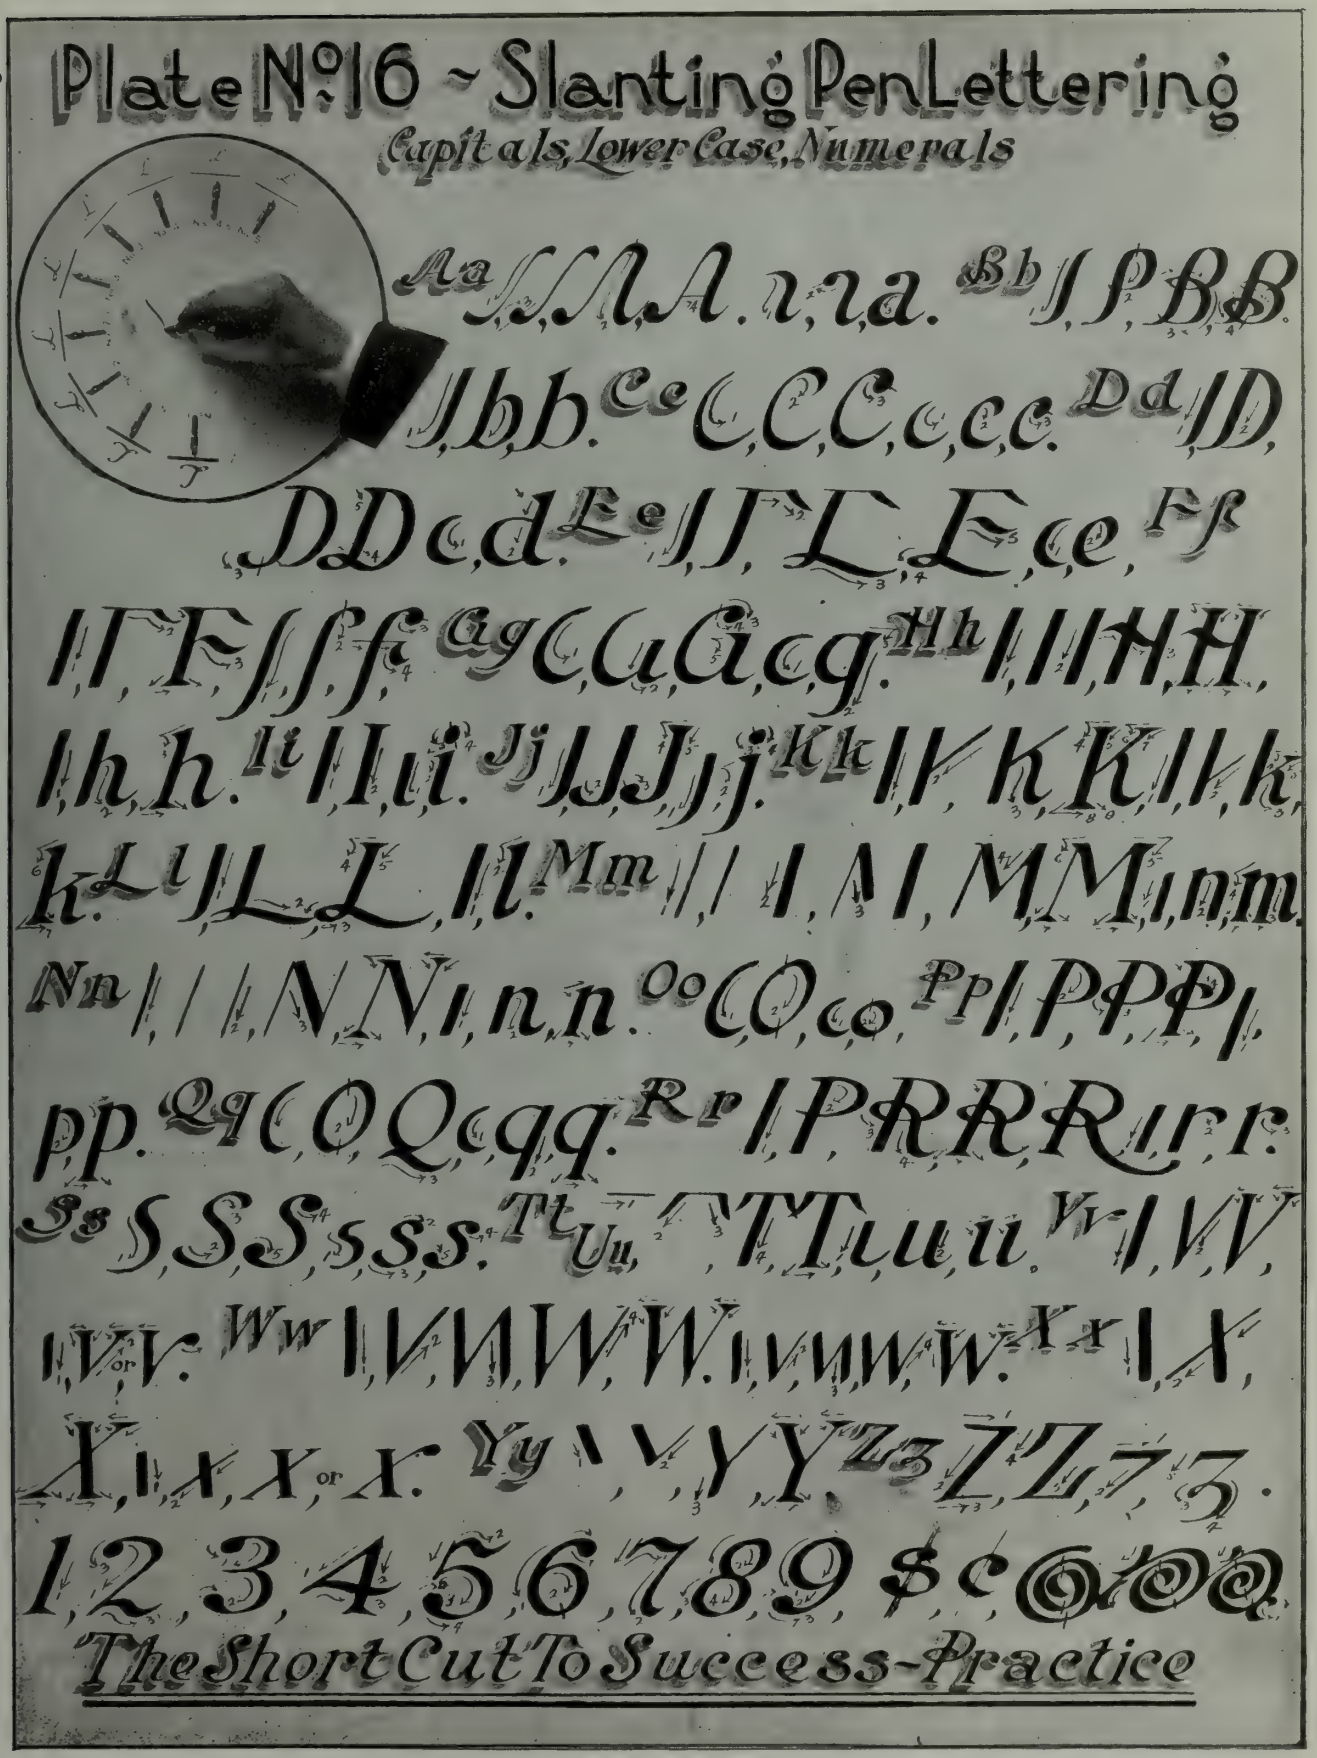
Panel card demonstrating the paragraph idea in show cards.

is much more refined in appearance than the larger card with heavy black face lettering. This card is particularly adapted for use in men's wear displays.

The panel as shown here shows the adaptation of the first word heading, i. e., the first word forms the heading and reads right on without breaking. The paragraphed idea is also used in this card as it is recommended for use in all kinds of advertising. Each paragraph should contain a well defined thought, so that if only one is read it will convery a meaning and not depend on the others. People will read a series of short, crisp paragraphs and get the whole story in a nutshell, whereas, if the same matter were written in solid, the tendency is for them to overlook it. For instance, the statement, "the simpler the form of decoration the better." You at once get the meaning and it is simply this, the use of elaborately decorated cards is not convincing, for the mind is taken from the wording and centred on the decorative parts, which should be avoided.

Forget speed sometimes and practice perfection. The great tendency to-day is to try to get the speed before the real formation of the letters is mastered. This leads to the indifferent appearance of cards so often seen in our stores—it promotes carelessness.

The Landscape Card.



An effective style of window card is the landscape panel. This is cut in a length about 18 inches and not more than 8 or 9 inches wide. It must be lettered small and in the centre, leaving a good white margin around. This card shows a sample of refined price-quoting.

The heading and price stand out strong while the descriptive reader points out the style features. The landscape card must be placed on the floor of the window resting against a hidden

(Continued on page 42.)

Landscape card illustrating the combination of brush and slant pen lettering.

This plate describes the various strokes used in the formation of the popular slanting pen lettering.

Progressive Hardware Retailing

Selling Cherry Pitters to Grocers — A Method of Introducing and Advertising the Line — Dealers are Now Featuring Wire Strongly — Other Notes.

MAINLY ABOUT WIRE.

The trade is now heavy in all classes of wire and dealers are featuring it strongly.

J. R. Barnes, of Mannville, Alta., announces the fact that he has purchased 250,000 pounds of barb wire, and that a consignment of 50,000 pounds has been received. In order to make a low price on this wire, he has decided to sell on the strictly cash basis. Booking orders by mail must be accompanied by a 10 per cent. cash deposit. Mr. Barnes is advertising the following guarantee:

"A guarantee is given that each spool will run 80 rods or over; that the material is of the highest tensile strength; that it is better annealed and galvanized than any wire ever offered in this section. All users of fencing are earnestly requested to compare the above wire side by side with others, and thus will conclude that 'Whilst the price is low, the quality is high.'"

A. E. Code, of Morris, Man., is also devoting considerable advertising space to wire fencing. A two-column ad. the full length of the page makes a forceful pronouncement on this subject.

The Taber Hardware Co., Taber, Alta., are featuring poultry netting. They present a strong argument in their advertising.

"One or two generations ago most farm animals roamed at large, but we have gradually found that this did not pay.

"The barn yard fowls have been the last to feel the effects of business methods on the farm, but at last they have to get in their place (in the poultry yard) and stay there.

"The farmer who reads the magazines knows that to-day many a chicken farm of a few acres pays a bigger profit than a big farm did a few years ago. Every farmer keeps chickens because it pays, and it will pay lots better and the farm will look better if they are kept in the poultry yard.

EARLY CLOSING MOVEMENT.

St. John, N.B.—The movement for the weekly half-holiday and early closing hours in Fredericton and St. John respectively is on the increase, and added support is being given with each succeeding year. Not only are the clerks in the hardware stores and many other establishments seeking shorter hours during the summer months, but the merchants themselves are in favor of the scheme to quite an extent. In Fredericton an association has been formed among the clerks for the purpose of mutual advancement and protection, and several dealers have joined with them in the petition they have circulated to have Thursday a half-holiday during the summer months. There is reason to believe that they will be successful in this idea.

The association spoken of among the clerks in Fredericton has elected officers as follows:—Honorary President, J. J. McCaffrey; President, N. Dougherty; Vice-President, Alex. Staples; Secretary, W. L. Jennings; Treasurer, Walter Burden. Other clerks who co-operated in having a petition for the half-holiday put into circulation and carried were as follows:—F. P. Hatt, Arthur Crowley, Arthur Porter, Bedford Green, and James McMasters.

SELL CHERRY PITTERS.

There is a splendid opportunity for retail merchants to profit by selling to one another. If a dealer in one line sits down and studies out the needs of dealers in other lines of trade he soon finds out that there are many articles he could sell them with mutual advantage to both.

For instance, grocers are anxious to accommodate their customers in every way, and some do this by loaning cherry pitters during the cherry season. What one grocer does, all may do. If the hardwareman were to call up each grocer in town and suggest it, he would probably sell a cherry pitter to each one of them.

The grocer would benefit from this arrangement. At a small outlay, he would procure the means of obliging his customers by the loan of the machine.

From the standpoint of the hardwareman, it may seem at first glance that the benefits he would derive would be of a doubtful nature. Would it not be better to sell direct to the public, some may suggest. Having the grocers loaning machines would result in spoiling sales, it may be contended.

The advantage of the method suggested consists in the fact that the grocers would thus become active advertisers of the cherry pitter. It is a comparatively unknown utensil. Although it has been on the market some years, the number of housewives who have abandoned the old way of pitting cherries by hand is quite small, relatively speaking. People are slow to adopt new ideas. After securing the loan of a pitter from the grocer, however, no housewife would ever go back to the old method. They would see at once that the pitter saved them a tremendous amount of labor and would want the use of the machine again. The grocer could loan his machine to a limited number only, and the rest would perforce go to the hardware store to buy machines of their own.

All that is needed to make a sure sale is to have the housewife use the machine once. After that, she would not be without it. But where the initial use is dependent on the outlay of money, many women would never make the test. By the method suggested, they are only too willing to give the machine a trial, and the desire to own one follows as a natural result.

LESSON XVI.—SHOW CARD WRITING.

(Concluded from page 40)

support, or held on a low easel stand to give the best effect.

Little or no decoration is necessary in a neat, well written show card. One thing that should be avoided is the combination of slanting heading, slanting reader and slanting price.

If the heading is lettered with a straight style, as the accompanying landscape card, the price, if any, should be the same, but the reader can stand to be written in the slant style.

Good Pen Practice.

A practice which is beneficial to the beginner is the series of scrolls as shown in the lower right hand corner of the plate (No. 16). Hold the pen firmly, but not cramped, and try a right to left motion, giving quick, sure strokes. Then try the reverse and you will find that it will instil confidence in yourself. Note the position of the pen in the hand as illustrated in the corner of the plate. Use Letterine slightly reduced with water if too thick to work freely.

For further information re pens, inks, etc., write the Editor, The Canadian Grocer, 140 University avenue, Toronto.

Current News of Hardware Trade

J. K. Knaus Dies.

Beausejour, Man.—The death occurred here of J. K. Knaus, tinsmith.

Store Completed.

Cupar, Sask. — The new hardware store of Pechet & Baratz is completed. The work of stocking has begun.

Appointed Agents.

The Smith Hardware Company, of Montreal, has recently been appointed Canadian agents for the Vandoren Manufacturing Company, toolsmiths, of Chicago.

Building New Factory.

St. John, N. B.—The T. S. Sims Brush and Broom Manufacturers, are building a large new factory here. This will cost $350,000. The large building which Sims now occupy has been purchased by Ganong Bros., of St. Stephen.

To Build Warehouse.

Saskatoon, Sask. — It is announced that the Dominion Fence Company will erect a large warehouse on Block 9, plan GF, in this city. The building will cost approximately $25,000, and the plans are such as to render possible the erection of additional wings when required.

Rolling Mills Fire.

Montreal.—Fire broke out in the engine room of the Peck Rolling Mills on Wednesday morning, and before the flames were extinguished damage to the extent of $15,000 was done. A number of men are out of employment for the time, but the harm done will not necessitate a long period of inactivity.

Trophy Displayed.

St. John, N.B.—The store of T. McAvity & Sons, in King Street, St. John, was the source of much attention during this week, when there was displayed a handsome silver trophy donated by the firm to the Power Boat Club for competition in racing events. The cup was placed on exhibition and attracted considerable interest. It was one of the most beautiful ever presented to a club in this city. The cup stands about twenty inches in height, on an ebony base, and is of a graceful and appealing design, being surmounted with a complete model of a speedy-looking motor launch in silver.

New Warehouse.

Saskatoon, Sask.—J. S. McDiarmid, of the Winnipeg Paint and Glass Co., has been in the city for the past few days with respect to the opening up by his firm of a new distributing warehouse in Saskatoon. Yesterday a permit was taken out by Mr. McDiarmid for a two-storey metal-clad warehouse.

On English Trip.

F. J. Cragg, of Cragg Bros. & Co., hardware merchants of Halifax, is in England on a trip of six weeks' duration. In the course of an interview with The Ironmonger, Mr. Cragg describes the business outlook in Nova Scotia as excellent. He states that in some lines of hardware, British manufacturers have been gaining ground of late years, but that in others the bulk of the imports are from Germany and the United States.

Fire Losses.

Quebec, Que.—Joseph Dion & Co., hardware dealers, have experienced a fire loss.

Thetford Mines.—The hardware store of L. J. Demers was visited by fire, some damage being done.

Wainwright, Alta.—Washburn and Mills' hardware store suffered some damage as a result of the disastrous fire which destroyed a number of buildings in the business section.

New Retail Firms.

Winnipeg.—Stoney Bros. have started in the plumbing business here.

Norwood Grove, Man.—A hardware store has been opened here by J. E. Smythe.

Goodlands, Man.—A branch store has been started here by George R. McLean, hardware dealer of Waskada.

Odessa, Sask.—A hardware and implement business has been started here by Edwards and King.

Cardston, Alta.—A hardware store has been opened here by Cahoon Bros.

Business Changes.

Alton, Ont.—Henry McClenan, hardware dealer, has sold his business to James B. Smith.

North Edmonton.—Wilson & Co. have succeeded How Bros. in the hardware and furniture line.

Tofield, Alta.—Hall & Kennedy, hardware dealers, have sold to Geo. B Brace.

Kamloops, B. C.—Frank Rushton, hardware dealer, announces his intention of retiring from business. He will sell out his entire stock.

New Liskeard.—Edward & Bevins are starting in the implement business here.

Dauphin, Man.—S. Cohen, dealer in hardware, has sold out to the Dauphin Hardware Co.

Miami, Man.—The firm of Lawrence & Campbell, hardware dealers, have dissolved, and William H. Campbell will continue the business.

Blair Lake, Sask.—R. W. Pozer and Joseph B. Clearihue have bought the hardware business of Milton Stephens.

Vibank, Sask.—Huch and Leboldus have taken over the hardware and implement business of Edwards and King.

Keeler, Sask.—The firm of Fumerton & Hetherington, hardware dealers, have dissolved partnership. A. W. Fumerton will continue the business.

Coutts, Alta.—H. Tennant, hardware dealer, is discontinuing business.

Personal Notes.

H. B. Dale, New Liskeard, who has been representing Lewis Bros., Montreal, in Northern Ontario since 1908, has severed his connection with this firm and will start at once with S. F. Bowser & Co., Toronto. Mr. Dale's territory will be Western Ontario, with headquarters at London.

S. A. Youngberger, of Marcelin, a former hardwareman of Earl Grey, Sask., is in that place on a business trip.

L. R. Rettie has joined the sales force of Lewis Bros., Montreal, and will look after the province of New Brunswick, having his headquarters in Moncton. Mr. Rettie is well known in the hardware trade, having been with S. Hayward, Ltd., of St. John, and also with Emerson & Fisher.

REDUCE CEMENT PRICE.

Montreal.—Following a similar reduction made about six months ago ten cents per barrel has been struck off the price of cement by the Canada Cement Company. The new rate applies only west of the Great Lakes. Since November, therefore, the reduction west of Port Arthur has been 20 cents, and east of Port Arthur, 10 cents.

SUPPLYING PANEL CASES.

The Glidden Varnish Co., Toronto, are supplying architects with a panel case, 17 inches long by 5 inches wide, containing 30 small panels of wood of various kinds, showing their complete line of colors in Endurance Stains and finished with their varnish.

TO MAKE BRUSHES.

The Western Canada Brush Manufacturing Co., Moose Jaw, have been incorporated.

Weekly Market Report --- Metals

METAL NOTES.

Lead is very scarce.

Tin has dropped in price.

Copper is reported to be on the verge of another advance.

Business in all metal lines is extremely brisk at present.

MONTREAL.

Montreal, June 6.—If things continue as at present people will shortly be expressing exceptional value by declaring that a thing is "worth its weight in lead." The metal is in great demand here at the present time. It is not that orders are larger than usual, although they undoutbedly are heavy, but the supply is well nigh exhausted. As a matter of fact, lead can hardly be secured. It is not a case of paying the price for the metal, but of getting it at any price.

Tin is another feature of interest this week. Late last week it dropped, and this week the toboggan-like action has continued. There seems to be no steadying influence on the primary market, and the price has dropped in all some £15.

Market Very Uncertain.

Montreal handlers, in common with practically all others, bought when tin was much higher than at present. They are, therefore, hoping for an advance, which will enable them to clear themselves. There does not seem to be much doubt that this advance will come, although the market is more uncertain right now than at any time for the past few years.

Copper, by reason of its continued rise in price, demands attention. There is no telling what heights this metal will reach.

Lead.—There is practically a famine here, since the dockers strike in London has materially interfered with shipments. Indeed, there will be no June shipments at all, which means that lead will not reach Canada in anything like sufficient quantities until August. Some now on the way will meet the needs of certain manufacturers, but it will not provide the handlers with any metal to offer for sale. At present the handlers are scraping together lead a ton at a time. It is remelted lead, too.

Copper Still Going Up.

Spelter.—There is any amount of this metal to be had now. Shipments which were delayed in March and April arrived all at once, and the supply is, therefore, plentiful.

Tin.—The syndicate, which formerly controlled this market, seems to be allowing others to direct its course. So there has been a remarkable up and down movement. It is certain that the demand for tin is great, yet in the past few days the price has fallen steadily. That this decline will continue is not expected, but tin at present is an uncertain commodity.

Copper.—Upward ever upward is the course here. The demand is great, and the rise, apparently, is directly attributable to this. It was expected that an advance, both in the ingot metal and in the bars and rods would be made here this week, but the handlers have decided to hold out for a time longer. They have stated, however, that the advance is coming, and since the English market keeps rising it is reasonable to suppose that the higher level will be struck by the local handlers within the next few days. This seems a good time to buy copper—at least for those who do not want a great quantity. Some large buyers are purchasing sparingly, hoping to get a lower price later on, but there seems some doubt if they will get what they are looking for.

Iron Pipe to Advance.

Iron.—Stocks are in fairly good shape. The docker strike does not influence this market, since shipping is done from the North of England. Iron is high, however, and some products—notably iron pipe—are to be advanced shortly.

TORONTO.

Toronto, June 6.—The metal market is featured chiefly at the present time by a scarcity of lead. It is hard to obtain and the prospects seem to point to it becoming more so before the season is out. Other metals are none too plentiful in view of the steady demand which keeps up.

The consumption is very heavy here. All metals are in firm demand. Iron and steel are needed for the vast development in structural and railway work, and there is a correspondingly heavy demand for copper, tin and lead. That this state of activity will be maintained right through seems assured.

Tin Going Down.

Tin.—At last the upward trend in tin has been checked; temporarily, perhaps, but checked nevertheless. On the London market, sharp declines have occurred during the past ten days. This is not due to any real weakness in the metal, however, but entirely to manipulation. It is not thought that the weakness will be felt long. Locally it is fully expected that the former high level will be regained very shorty.

Copper May Advance.

Copper.—Rumors are heard that copper may advance again. The heavy consumption, here as elsewhere, lends substance to this report. Certainly the demand for copper is very heavy, and it shows every sign of remaining so. There have been changes on the primary markets in an upward direction. In commenting on this the Metal Market says: "The same old story is given out after each successive advance in the market, namely, that the supplies are inadequate and are likely to continue inadequate for many months to come. Each advance seems to make buyers more anxious than ever to get under cover and from all accounts a huge business has been done since the market crossed 16½c."

Lead Very Scarce.

Lead.—There is a great scarcity in lead, due primarily to the dockers' strike in the old country. It is feared that the scarcity may become more pronounced as the season advances.

In the meantime there is a big demand locally.

Spelter.—The spelter situation is unchanged. There is an active demand. There seems to be a close relation between supply and demand, thus keeping the spot market pretty well bared of surplus stocks.

Plates and Sheets.—There is a heavy demand for plates and sheets. Stocks are reported to be fairly satisfactory as to size.

WINNIPEG.

Winnipeg, June 3.—The only change of importance this week is an advance in copper rivets and bars, following a generally strong tone in the copper market.

There has been a fair business in corrugated iron and galvanized sheets, which latter should improve as the building season advances. The demand for iron piping for well casing is quite up to the average, as is the trade in galvanized and lead pipe.

The feature of the season has, however, been so far the very marked movement of structural steel, both for steel frame and reinforced concrete buildings. There is a good demand for metallic ceiling, which is evidently growing in favor. There is, however, a strong feeling against metallic sheetings of all kinds in the city fire department.

Weekly Market Report --- Hardware

The hardware market shows an extremely active tone, but difficulty is being experienced in making shipments. Dealers, as a result, are complaining of slow deliveries.

Some price changes have been noted. Bright steel butts and pearl-handled cutlery have advanced and a decline is noted in Portland cement.

MONTREAL.

Montreal, June 6.—The continuance of the warm weather is doing much for the trade in hardware lines. It is enabling buildings to be hurried to completion. Already builders' hardware is being needed, and the signs that much more will be wanted before many months, are so plain that dealers in all parts of the country are ordering to make sure that they will have the stock when the stock is needed.

For spring and summer lines the demand is, of course, the keenest just now. These days are driving people out of doors. They are getting their gardens in shape, and they are buying freely the tools which enable them to do this. Even for garden seed there is a demand, many hardwaremen now carrying this line, upon the ground that when they supply the tools they might just as well supply also the seed for which the tools prepare the way.

A Strange Situation.

Household Goods.—The call here is improving, and it was good a week ago. The kitchen showers being given for the bride are creating some demand for graniteware and similar lines. New homes being established mean a still greater demand. A number of supplementary orders being received show that the retail sales have been all that could be wished.

Builders' Hardware.—The position is strange. Copper and brass have advanced again. Copper and brass are used largely in making builders' hardware, yet the price of this has not advanced. Competition with the United States is still given as the cause of the low prices. If the ingot metal continues to advance, however, the price of builders' hardware may rise in the United States, despite the quietness caused by the coming elections. If so, prices here will assuredly advance.

The demand for builders' hardware has been remarkably large. It seems this is to be a record year.

Seasonable Goods.—Hose, sprinklers, lawn rollers, lawn mowers—these and similar lines have been sent post-haste from the jobbing houses this week. The warm weather is putting the lawns in shape. Lawn mowers, rollers, trimming shears and implements of that style are therefore wanted immediately. The demand upon the retailers must have been large, for their supplementary orders are crowding the jobbers already.

For such garden and verandah furniture as hammocks and rustic chairs there is also a great demand, and screen doors are being sold largely. The day of the tormenting and disease-spreading fly is at hand, and people are only too ready to take such steps as will safeguard them against these pests.

A Shortage of Cement.

Cement.—Complaints of a scarcity are already being heard. The grumblings come from the West, where the call is already exceptionally large. Car shortage is, of course, the cause given for the insufficiency of the supply—an insufficiency which is not serious as yet, but which threatens to cause a good deal of anxiety later on.

The drop in price of 10c a barrel, which has just been announced to come into effect on all cement sold west of Port Arthur, is causing general satisfaction to those living west of Port Arthur.

TORONTO.

Toronto, June 6.—Business is brisk in all lines. The jobbers state that the volume of trade is now so heavy that they have all they can handle, in view of the bad transportation facilities.

It appears that the railroads have caught up to some extent with incoming shipments, but they are farther behind than ever with the outgoing. The result is that dealers are not getting their supplies on time, and the jobbers are receiving a storm of complaints. The congestion is reported to be bad in Ontario. It is quite clearly the fault of the railroads, but the jobbers are bearing the brunt of the complaints.

Quite a few changes in price have been noted this week, none, however, of any great size or significance.

Seasonable Goods.—There is still a good demand for warm weather goods, although most dealers are now pretty well stocked up in these lines. Garden tools, lawn mowers, awnings, window netting, verandah shades, etc., are selling steadily, although most orders are now of the sorting variety.

Household Goods.—The demand for refrigerators is certainly breaking all records. The refrigerator, once a luxury, has become a necessity. The result is the unprecedented demand now experienced. It is noteworthy that the better grades are now in demand, and the tendency to buy porcelain-lined refrigerators is marked. Other household lines, such as ice cream freezers, cherry pitters, meat cutters, etc., are in steady demand.

An Advance Made.

Cutlery.—An advance has been declared in pearl-handled cutlery, further reference to which will be found in another column. The advance is over 10 per cent. in some lines.

Steel Butts Advance.

Builders' Hardware. — The demand for builders' hardware of all varieties is growing larger every day. The list on bright steel butts has been slightly advanced as follows:—

No. 840: 1½ in., .67; 1¾ in., .75; 2 in., .81; 2¼ in., .92; 2½ in., 1.07; 3 in., 1.30. Nos. 800 and 838: 1 in., .32; 1¼ in., .37; 1½ in., .48; 1¾ in., .59; 2 in., .67; 2¼ in., .76; 2½ in., .81; 2¾ in., .95; 3 in., 1.07; 3½ in., 1.49; 4 in., 2.12. The discount remains the same.

Cement has been reduced in price, as noted elsewhere.

WINNIPEG.

Winnipeg, June 3.—Wholesale houses continue to ship briskly to country points, and the city demand is quite up to expectations, and notably heavier than last year. Salesmen are already securing heavy orders for fall shipment, and the extremely optimistic nature of crop reports is stimulating business in a marked degree.

Summer sporting goods, camp supplies and garden tools have been moving very freely, and there is prospect of much profitable trade in these lines for some two or three weeks yet.

In building materials, there has been a very active season. Building permits issued already are near the $8,000,000 mark, and it is predicted that the total for the year will exceed $20,000,000. This activity is noticable in all the West and indicates confidence on the part of investors in the future of the prairie provinces.

Prices generally are firm, the only change to be noted is an advance in copper goods, which has been foreshadowed for some time.

Country retailers are now doing heavy business in barb wire, but the rush season in handling it has hardly yet commenced.

Stoves, Furnaces and Accessories

Never Withdraw From the Field

The Retail Dealer Cannot Afford to Drop Stoves for Any Length of Time—Persistent Attention to This Department Through the Summer Will Bring Results in the Fall — The Bearing of the Mail Order House on the Situation.

It's a common plea with the defeated baseball team: "If we had only started that batting rally an innings sooner we'd have won sure." The student who has failed by a few marks bewails the fact that he did not start in to do real work a week earlier. The defeated candidate believes that he would have headed the polls if he had only got his canvass started earlier.

It is the same with everything. The man who is late in the field stands little chance with the opponent who begins his campaign bright and early. He may make a great effort, but he is always just a little behind at the finish. The handicap of a late start is indeed hard to overcome.

Coming to the point, the dealer who wants to work up a brisk stove trade must get into the field early. The great bulk of the business in stoves comes in the fall, of course, but the dealer cannot afford to wait until the fall before starting his campaign.

A Matter of Time.

A stove transaction in the majority of cases is slow in maturing. People do not hurry off to the hardware store just as soon as they begin to realize that they need a new stove, the way they do with other purchases. They give the matter plenty of thought. The purchase of a stove involves a neat sum of money, and has a pretty direct bearing on the future comfort of the family. People realize when they go to buy a stove that they cannot afford to make a mistake.

It generally happens that quite a time elapses after a family decide to buy a stove until the deal is actually closed. It is, in fact, a common occurrence for a family to decide about the end of the winter that they will require a new range or heater the next winter, but to delay purchasing until the fall. Note what happens in a case of this kind.

There are two stove dealers in the place. One handles a good line of stoves, but does not believe in advertising to any extent. He does do a little stove advertising, it is true, but during the rush season in the fall only. The same rule applies to his methods in other respects. He does not sell many stoves after the spring trade is over, and it appears to him to be the height of folly to bother about stoves until the fall trade starts.

The other dealer handles a good line of stoves, also, and he believes in letting the public know all about that line. He advertises more or less the whole year around, and keeps the stock pretty well to the front, whether he is selling many or not.

Mr. Brown decides in spring that he will invest in a new stove in the fall. At intervals during the summer he sees an advertisement in the paper which reminds him that Smith & Co, are handling the best make of stoves on the market. Robinson, the rival dealer, is never heard from. If he enters Brown's store he sees a line of well kept stoves, which bear out by their appearance the claims of the advertisements. If he goes into Robinson's, he sees a few dusty specimens partly visible behind an array of screen doors and a covering of enamelware, buckets, etc. The same thing continues right up to the time that Brown decides to see about that stove. It is not hard to guess which dealer he seeks out first.

Stay in the Field.

The moral of it is that the dealer must not only be early in the field; he must stay in the field the whole year around.

"I don't sell more than half a dozen stoves during the whole summer, so I cannot afford to pay much attention to them," is the complaint voiced by many dealers.

They are showing a woeful lack of foresight. They have lost track of the fact that the early fall will bring a rush of orders and that the fall trade can be secured by earnest and persistent work IN ADVANCE. A steady campaign through the summer may not bring a great amount of immediate business, but the results will be noticed when the fall trade begins. It will be found to have had a direct educative value. "I do not expect direct results from every ad. I insert," explains one dealer. "One ad. may not convince a person that they should come to me for stoves, but a series of advertisements will. I've made sales in October which could be credited to the advertising which I began in May."

There is another consideration which must not be lost sight of. The mail order house does not cease its efforts during the slack seasons. The catalogue has as much to say about stoves during the summer as at any other time of year. If the dealer does not follow the same course, he voluntarily leaves the catalogue house in full possession of the field. It has several months in which to circulate the idea that to buy stoves away from home is the cheapest method. When the fall season arrives, the effect of this will be felt.

Big Demand for Water Heaters

Dealers Report Ready Sales of These Comfort-Bringing Contrivances—But Intelligent Salesmanship is Needed to Secure the Best Results—Many are Willing to Pay a Good Price for a Good Article—A Striking Phrase Used.

"A Hot Bath in Seven Minutes for Two Cents."

Such is the sign which a Montreal dealer, who has been pushing water heaters, put upon one of the models which he was displaying in his window. An attractive phrase it was, and no wonder business was drawn.

This is a season when heaters may well be sold. They are needed now. In practically every house the furnace has been allowed to go out; and while the weather is becoming quite warm, there are yet cold days to be encountered. Moreover, even on the hottest day, an icy-cold bath is not a thing to be experienced with joy. There the pleasures of anticipation far exceed those of realization.

Low Cost, Little Attention.

The argument that water heaters would prove a real convenience in the home, is one from which people cannot well get away. But people need to have a thing brought clearly to their attention; and it is for this reason that the Montreal dealer has thought of a striking phrase, which brings it home to all who pass that they can get a machine which will give them hot water

at a very low cost—a machine which also will demand very little attention.

This method of attracting the attention of the passers by has proved exceedingly effective. For this reason: The people are struck by the statement of cost, and by the statement that the bath can be prepared in seven minutes. But they want to know not only the cost of upkeep, but also the initial cost; and to find this out they enter the store. This gives the dealer his chance, and from the number of sales the one in question reports, it is quite evident that he has made the most of every opportunity accorded him.

Will Pay the Price.

"I have found this," remarked the dealer in speaking of his success, "that there are a large number of people in this district who are willing to pay a good price for a heater. There is one contrivance here which I thought would be too expensive. I got one model in, for I felt I could surely sell that, but I hardly expected to market many more. I really installed the one more to make my stock attractive than for any other purpose.

"That belief, though, only showed how far I was behind the times. I soon discovered that there were a number more interested in that expensive machine than in any of the others. When they heard it worked automatically—that the turning on of the tap started the flame which in a moment would supply them with hot water—they were pleased. When I showed how the heater worked; how safe it was; how little would be the cost of upkeep, they were still more interested; and the explanation of the thoroughness with which this heater supplied the house—how it gives hot water for any tap—clinched a number of sales. That heater sells from $100 to $150, and the cost of installing will add to this, yet I have found people ready to pay the amount."

Want to Know Whole Cost.

The question of installation has been one which this dealer has been forced to consider seriously—much as has a man who has just taken up the handling of gas stoves. "People want to know how much the heater will cost them when it has been put in operating order. I have not been able to put an installed price upon the machines, for I have found the cost of putting them in differs so much. But I have found it best to make an inspection of every house in which there is talk of putting a heater. Then I can tell the prospective purchaser exactly what the installation will cost, and by adding this to the cost of the heater, the full charge is ascertained. People want to know the full charge nowadays, before they make a purchase."

Sold Samples Even.

But there are cheaper heaters which have proved exceedingly popular, according to the statement of this successful dealer. "Take that contrivance," he said, and pointed to a boiler. "But the contrivance isn't there," he added. "It ought to be but I had to sell even my sample. The demand has been exceedingly heavy.

"The machine I wanted to show," he continued, "was one which fits onto the boiler. The gas is turned on there, and in ten or fifteen minutes hot water can be secured from any tap. This machine requires a little more attention than the larger model. Perhaps it is not as good in a number of ways, but it certainly is a great little heater, and people are taking to it more and more. If it is operated with care the gas consumed is not at all great. It means a trip to the cellar if the boiler is located there, that is really the only thing against it.

Had to Borrow.

"Yes, I have sold a number of these models," continued the dealer in reply to a query. "You see they are cheaper than the others—they can be sold installed for $25—and while price does not seem to count with a number of customers, it is naturally a consideration with many. Why, the call for these heaters has been so heavy that I have had to borrow. I had a shipment on the way recently, but there was some delay and the customers who wanted a couple of the heaters did not want to wait. I had to borrow from a fellow dealer, and as you will see that shipment, which arrived almost as soon as I delivered the borrowed heaters to the impatient buyers, is gone too. So is my sample.

"By the way," remarked the dealer, "the man who allowed me to have two of his heaters pretty nearly lost a sale because of his generosity. He had a run on heaters—sold what he had on hand, and was hard pressed for another when my shipment luckily came, and I returned what I had borrowed."

There are heaters of still other patterns, of course. One, for instance which stands beside the bath in the bath room is exceedingly popular. Perhaps it produces the hot water faster than does any other machine, but it does not supply so many taps.

Figuring Overhead Expenses on Tin Work

The owner of the tin shop should work out for himself some method by which he can charge the proper proportion of the "overhead expense" to each job done, so that by the end of the year these incidental expenses will have been automatically taken care of.

In the first place, if the tinner pays $3.50 per hundred pounds for galvanized sheet iron, and, when he has finished the job, figures the material at $3.50 on the weight of the finished job, he is actually throwing money away, for the simple reason that there is always a certain amount of waste that cannot be avoided. Proper allowance must be made for this and the easiest way is to add on say 15 or 20 per cent. to the weight so as to cover this item.

Then a man is entitled to a profit on the material, and if, as is generally the case, the dealer has a regular retail price at which he sells sheet iron, that is the figure that should be used and not the wholesale price.

Labor Should be Treated as Merchandise.

Labor should be treated exactly the same as merchandise when figuring the cost of a job. Whatever is the regular percentage for arriving at the price of goods should be used in charging for labor, for it is paid for in cash and there is waste and expense attached to it.

Here, then, would be the correct way of finding the selling price of a job. The figures used are not meant to be other than for the sake of a concrete example, and each dealer can use his own percentages as they may appply to his particular business:

75 lbs. sheet iron at.. $4.40		$3.30
8 hours labor at 30c per hour	$2.40	
Overhead, 20 per cent.	.60	—3.00
		$6.30
Profit, 10 per cent..		.70
Selling price		$7.00

Always Figure on the Sell.

All percentages should be figured on the sell and not on the buy. Twenty per cent. of the sell equals 25 per cent. of the buy. Ten per cent. of the sell is 1-9 of the buy.

If this method of figuring is wrong, you will have to prove it. "I am from Missouri." Whether it is wrong or not, if you figure as per the above example you will make your tinshop support itself and pay a small profit besides. If you cannot get work on this basis, you will be better off if you discontinue the shop, unless you believe that having a tinshop, which costs you money, brings enough extra and profitable trade to more than compensate.—Hardware Trade.

Weekly Market Report---Stoves

RECORDS WILL BE BROKEN.

The stove trade is exceptionally brisk for this time of year. Orders are coming in, not only for the fall business, but for immediate shipment as well. There is every certainty of the year's trade discounting all past records. Manufacturers do not hesitate to predict this.

MONTREAL.

Montreal, June 6.—Possibly the large demand is the only feature of importance which the market shows this week, but it is enough to make the situation worthy of the most careful consideration. The call has been heavy—heavier than was expected—and there is no telling what will come. For some summer lines the bulk of the orders has already been received, but other goods will be in greater demand as the months pass. It seems that this year is to beat the record set in 1911.

Price changes there are none. This, however, does not mean that there are not to be changes. The market is in such a state that it seems exceedingly likely an advance will be struck for several kitchen lines. "I think we will have to make an advance in tinware," remarked a manufacturer this week, "all metals are high, and appear to be going higher. Copper, too, is soaring, and it would seem that the lines in which this is much used will be put upon a higher price level before very long. We can retain our prices only a certain time after the advance in the raw material."

Big Call for Watering Cans.

Summer Goods.—It is here that the heaviest orders are being noted. Refrigerators are in great demand. The dealers are selling rapidly, and are coming back upon the manufacturers for fresh supplies. Ice cream freezers, too, are being bought largely while the call for watering cans has been unusually large—even for this time of the year, when there is always a heavy call.

All classes of kitchen goods are wanted. Many kitchens are being furnished now, not only because this is the merry month of June, when the wedding bells are tingling and new homes are opening, but also because many are now moving to the country for the summer. They prefer to buy new utensils for these temporary kitchens, than to bother packing and carting a lot of pots and pans from the city home.

Gas Stoves.—There is no break in the large demand which has arisen. The hot wave has convinced many, who formerly have held off, that they need a gas stove, and that they need it now. Those who are not fortunate enough to have gas are buying coal oil or gasoline stoves. The demand from the country for these has been exceedingly large, both the farmers and the summer visitors to the country having been quick to realize the comfort which these models mean for them.

Ranges, Heaters and Furnaces.—Steadily the demand for these lines is increasing. Ranges are being ordered by those who want to have a good supply when the fall starts. Some, however, are selling ranges now. A stove is something which is needed in many a newlyweds' home, and the hardware dealer who has a good assortment of stoves on hand is likely to get the order.

Preparing for Rush.

Heaters are moving slowly. There is some booking for fall delivery, but as yet little real activty is noted.

Furnaces are different. They are wanted for later delivery, and they are wanted now as well. Perhaps it will always be so when a great deal of building is going on—as at present. The present rush, though, is but a drop in the bucket compared with what will come later. The manufacturers appreciate this, and are making a great effort now to secure a reserve which will enable them to meet the heavy ordering of a few weeks hence.

Toronto.

Toronto, June 6.—The stove manufacturers are so much busier than usual at this time of year that they do not hesitate to predict that the whole year's trade will be a record-breaker. "We are away ahead of last year so far," said one, "and there is no reason to suppose that the pace will not be kept up. All indications point that way, and the orders coming in show a heavy demand all around.

The trade at present is heavy in such lines as tinware, enamelware and kitchen supplies generally. Large shipments are being made in these lines.

Gas Stoves.—"Our trade in gas stoves has been double that of last year," is the report of one manufacturer. While all do not report so heavy an increase, stove men agree that the demand has been far in excess of other years. The only fly in the ointment has been the inability to get the supplies to make prompt shipment in some lines. The sizes most called for have been hard to get out in sufficient bulk to meet the demand.

The gas stove trade continues as brisk at the present moment as at any time during the spring. There have been no signs of abatement, and manufacturers are inclined to think that the activity will be maintained for some time yet.

Oil Stoves.—The same condition applies to the oil stove trade. There is a heavy call for oil stoves, the demand being largely in excess of last year. As the exodus to the summer resorts has only just begun, the demand for oil stoves will undoubtedly continue for some time yet.

Ranges.—Although orders for immediat shipment are neither frequent nor large, more business is being placed than usual. Booking for the fall trade is brisk, and the travelers report that the dealers are showing a tendency to get their requirements placed and their stock in earlier than usual.

Heaters.—Fall ordering for heaters is quite brisk. Of immediate trade there is very little.

Furnace Industry Brisk.

There is no mistaking the fact that the fall is going to see a record trade in furnaces. The demand already is large. Manufacturers report that they are making shipments of six and eight furnaces to one dealer at a time, which indicates that considerable is being done in that line. Furnace men state that they have quite a little work on hand and that the prospects for the fall are of the very brightest.

WINNIPEG.

Winnipeg, June 3.—There is little to report that is new in the situation here. The demand for gas stoves and different varieties of oil stoves for summer use is still very strong. Electric cooking apparatus is also a line that is going out very fast this year, and is evidently growing in favor.

There has been a seasonable trade in heavy ranges for hotel and restaurant use and medium ranges for farmers' purposes have also been moving freely.

Heating apparatus, both by steam or hot air is now becoming an important factor in business and will be a leading feature in the output of the trade as soon as the building programme of the city becomes further advanced. On the whole, business in all lines is satisfactory, and the outlook exceptionally bright.

Methods of Retailing Paints and Varnishes

Window Brought Far-reaching Results

People Atracted to New Lines of an Old Paint—They Bought Paint for All Kinds of Work, and Bought Brushes, Too—Advisable to Show Brushes in Connection with Paint Displays, and to Show Them Prominently—How Long Should Even a Good Window be Permitted to Remain?

While there can be little doubt of the benefit resulting from arranging window displays of paint, there is room for a good deal of doubt regarding the advisability of leaving such displays in the window month after month. There is certainly good done this way, but the older a display gets, the less force it has. People pass by without giving the window a thought. Something new is needed to attract them.

This does not mean that it is foolish to have paint displayed in the window for long at a stretch. It does mean, however, that it is better to have this paint displayed in a different way. It takes time and energy to change the display—but this can be done on a day when things are quiet in the store. It will not be waste time anyway—for experience has shown that the new displays attract interest and draw trade.

Sets a Week Limit.

Mr. Bedard, manager of the hardware department of Philbin & Co., Westmount, has something to say upon the subject of window dressing—and of the advisability of changing the trims often. A week is about the longest time he likes to have a trim left. Occasionally—as in the case of the trim reproduced here—a change is not made for double this time, but this is only in a case where a display is exceedingly attractive or exceedingly seasonable. If a window is so striking that people will not only pause to see it, but will also talk about it—creating a desire to see it in the minds of others, Mr. Bedard believes it is wise to permit the display to remain a fortnight, or perhaps a little longer. But as a general rule, he thinks a display should be changed after it has been shown a week; not that it would cease to bring returns then, but that it would bring less returns than formerly, and less than would be brought even by another arrangement of the same goods.

An effective display of paint in the store window of Philbin & Co., Montreal.

Making Friends for Paint.

The trim which is shown in the accompanying cut was given more than ordinary time because it was bringing more than ordinary business. "We sold a lot of paint through that window," stated Mr. Bedard. "I know the results came from the trim. We have had a heavy sale of paint all spring, but this was different. People would say that they had been attracted by the window. Perhaps they would not state this by way of giving the window-dresser a compliment, but they would remark: 'I've used that paint, but never that particular variety which is shown on the lower row of your display. I would like to try a can of that.' So a floor finish—or a wall paint would be sold. Perhaps it would be a varnish or a paint for outside work. The result would be the same. We would have made a new sale and a new friend."

"Everybody's Doin' It Now."

A paint display, though, does more than attract people's attention to some new line of paint. It acts as a reminder—suggesting to many that they have some painting to do. It is surprising to just how many this suggestion does come. That beautiful song, "Everybody's doin' it," seems to apply especially to painting.

People are painting for all purposes just now—at least they are in some districts, and they will in others if this is only properly suggested to them by the dealers. Men are painting sidewalks and porches, fences and roofs. Women are painting floors and doors, wainscotting and walls. There seems no telling just where paint is doing this year. It is being put on everything from the cable of the Suspension bridge to the leg of a fancy parlor chair. The demand has been tremendous, and it will continue tremendous. All that is needed, apparently, is to give the people the suggestion that they might well paint the outside or the inside of their house. They will obey the impulse. How to give the suggestion is, of course, the problem, but it is certain that one of the best means is through window displays. These interest hundreds — and are of especial value at this season of the year.

Brushes are another fine line to play up prominently just now. Mr. Bedard

states that they sold a great many brushes as a result of the paint window shown here. Not only were brushes arranged in this window, but they were well displayed near the paint, inside; and so, with many purchases of paint purchases of brushes were also made.

There are dealers who may think that brushes will sell themselves—that a man or woman buying paint will naturally think that they will need a brush. But this is not altogether true. If brushes are shown, the paint buyer will almost certainly pause to look at these. They may decide that they do not need one—on the other hand they may remember that it is some time since they have painted before, and they may wonder if they will be able to find the brush which they used then. They may also think that it will quite likely be in bad condition, and so they will determine to make a new purchase.

A good display of brushes, moreover, will enable the salesman who thinks of his own benefit and of his customers to show the difference in the brushes. A brush which would be suitable for painting a fence or a sidewalk would hardly do the best work on a wainscotting. If the dealer, therefore, finds out what the work to be done is, he may then show a brush which would be suitable for this. The buyer—even if he has a brush at home—will perhaps not have one which would enable as careful work as the model which the dealer shows. He will, therefore, be quite willing to expend some money for the new brush.

There are lines which naturally go together in the hardware store — lines which are mutually helpful. Prominently among these must be considered paints and brushes. A display of one, forgetful of the other, is but a partial display. They are the cause and the effect. They go hand in hand.

Why White Lead Has Advanced

Pig Lead is Hard to Obtain at the Present Time—The Advance Bears Out the Predictions Made in Hardware and Metal—What of the Future?—Are Further Advances Likely?

Some three weeks ago something was said about white lead. Then a fifteen-cent advance seemed to make a word of explanation and a word of advice necessary. How far the advice was followed is a little hard to tell; but it is to be hoped that at least some heeded the warning, which was sounded only after careful investigation. Those who noted what was said are money in pocket to-day.

Three weeks ago, when lead rose 15 cents—it was stated that this would not be the last advance. Indeed, it was reported that many who should know what they were talking about, feared that necessity might force the price up to 8 cents a pound. Now there has come another 15 cent advance. Lead is not selling at 8 cents yet, but it has reached 7¼c in Montreal, and 7½c in Toronto. One hates to say "I told you so," but truth compels.

So much for what has passed within a month. Something more, however, may well be said of what is to come. The past is gone. It is useful only as it casts light on what is to come. There is a saying that coming events cast their shadow before. Perhaps this is true, or perhaps it is rather the past events which cast a light ahead. Anyway, what has come and gone seems to indicate very clearly that the last is not yet, as far as white lead is concerned. Perhaps the present price will obtain for some little time, but there seems strong reason to suppose that another rise will have to come.

For a moment consider the situation as it is to-day.

To make white lead there must be pig lead. This needs no proof. Yet here is the present difficulty, for pig lead is hard to secure. Little is coming from British Columbia, production there being almost discontinued by reason of some causes unknown. Where possible the contracts for Canadian lead are being filled with pig brought from England, but the supply of this is none too great. Lead is needed in other places besides Canada, and there is only a certain amount of the metal which may well be exported from the old country.

Then, to make conditions more serious than they otherwise would be, has arisen the dockers' strike. The end of this, it is said, is in sight. Certainly, it is to be hoped that this is true, yet already shipments have been interfered with. Already damage has been done. Lead was hard enough to get before. It is harder now.

When much lead is wanted and only a limited amount is to be secured, there comes naturally a rise in prices. This has come now, and the manufacturers of white lead are paying more than they have for some time for their pig. The cost of manufacture has not decreased. Rents are as high as ever. Labor is as expensive. Cans still cost the same amount. There is no saving anywhere, while the price of the principal ingredient has risen.

Nor is the worst yet. There is some reason to expect that lead will rise still further. But even should it only hold its present high price, or even should it sink a little, a higher level for white lead is likely to become necessary. Advances have been made, but these have been smaller than would have been necessary had not the corroders had a fair supply of pig on hand. This they secured at a more favorable market than the present one, and therefore their advance in prices on the finished product did not have to cover the advance on the raw material. But the old pig, bought below the present market, will not last long. All the lead used will be that bought at the high price—ergo another advance will be necessary.

Catalogues and Booklets

Electric Welding.

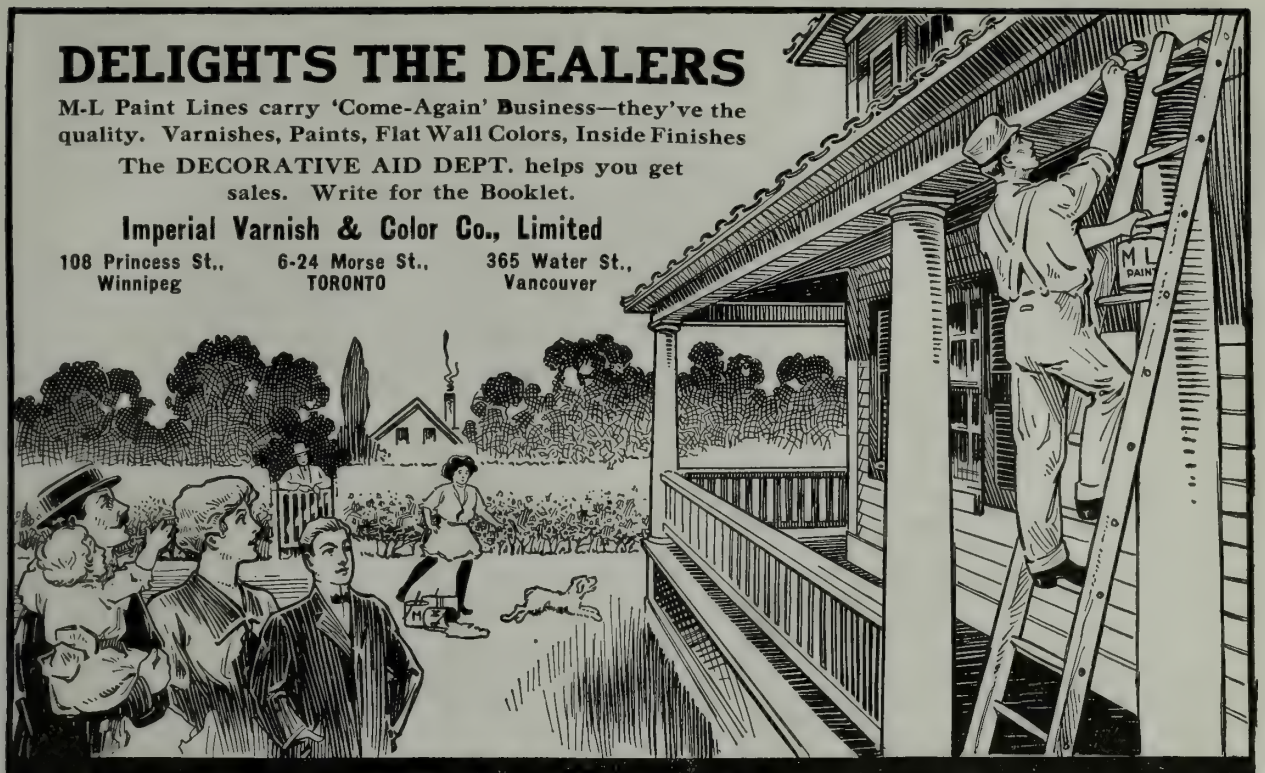
The Thomson Electric Welding Co., Lynn, Mass., have issued a catalogue, illustrating their electric welding machines. In addition to a complete description of their many models, considerable space is devoted to illustrating and explaining the different parts and showing special lines, such as agricultural wheel welders, tramway rail welders, automatic flat band, tube, ring, lap seam, chain welders, hand and spot machines. The cover is attractively embossed in three colors.

Steam Specialties.

The Steam Appliance Co., Milwaukee, U.S.A., have sent out their catalogue No. 17, showing their line of steam appliances. Among the lines shown are oil separators, steam separators, vertical separators, receiver separators, ammonia separators, exhaust heads, Corliss valve steam traps, grease traps and steam flue cleaners. The catalogue is full of very complete descriptions, illustrations and plans.

A New Luther Catalogue.

The new catalogue just put out by the Luther Grinder Mfg. Co. is worth while looking over. The cover contains an attractive, strong design in two colors, with the Luther trade mark on the back. Its 48 pages are devoted entirely to the machines of the Luther line. The 32 different styles of grinders contained in the Luther line include sharpening machines of every description and for every purpose. This catalogue is the first one gotten up by this company since they adopted their new sharpening substance, Dimo-Grit.



DELIGHTS THE DEALERS

Weekly Market Report --- Paints

LEAD AND OIL UP.

Advances in white lead and linseed oil have featured the market. As a result, the possibility of an advance in prepared paint has been brought closer, although nothing definite has been heard on that score.

Much anxiety is felt on the score of the social troubles in Belgium. The glass situation would be seriously affected if the threatened revolution developed.

MONTREAL.

Montreal, June 6.—Great interest is given the market this week by the further advance of white lead. It is only three weeks since there was an advance before, and this further increase of 15 cents has given strength to the declaration that first 7½ and then 8c lead will come.

The great demand for paint continues. "If we did not get another order," remarked one manufacturer," we would have all we could do for two months. We are just about two months behind, and yet we have produced more than ever before." The call has been tremendous. There is a little easing off in the ordering, but still the daily demand is more than the manufacturer could meet, even were they not confronted by a great pile of old and unfilled orders."

Linseed Causing Anxiety.

Linseed oil, while not rising in price at present, is uncertain. It is causing the manufacturers much anxiety, and though it now seems that a rise in the price of mixed paint will not come for perhaps a month, the position of linseed, and of lead and zinc makes it seem that an advance must be made.

White Lead.—As this product, and the recent rapid advances in it, is treated at some length in another place, little need be said here. In brief it is the scarcity and high price of the pig which has necessitated this late advance. It is the likelihood of the scarcity becoming even more distressing that makes a still greater advance seem likely.

Linseed Oil.—Where this product is concerned there is always room for some conjecture. There is a rumor that the Plata crop of flax is poor. Also, less seed has come through from the Canadian west than was expected. Yet when all is said and done it appears that the real cause of the present scarcity is the same as that which is responsible for the scarcity of cars on the railways. The demand has increased faster than the supply. It must not be thought that there is less flax seed than there has been in past years. Apparently this is not the case. But the demand for the available supply is large, therefore, the prices have risen.

Don't Like to See Oil Go.

Manufacturers of paint are none too anxious to sell oil at all. They have their supply booked for some time, yet they fear even higher prices and do not like to see too great quantities of oil leave their works.

Generally prices are quoted at $1 and $1.05.

Turpentine. — Little to report here. prices remain at .70.

Putty.—An advance of 15 cents in standard and 40 cents in pure, recently made, has not had any effect upon orders. These continue large. There is still some talk of a possible shortage about August. The grinders are keeping their plant continually busy.

TORONTO.

Toronto, June 6.—The upward trend in most lines is still very marked. Since last writing, white lead has advanced and linseed oil has also gone up. To slightly offset this, turpentine has declined in price.

No further talk of an advance in prepared paints has been heard, but it is deemed quite possible still that some action may be taken. The continued advances of white lead and oil point to a higher price level for paint in the not far distant future.

The glass situation is at present engaging much attention. The troubles in Belgium may seriously affect the supply here. If the threatened revolution develops, the results would indeed be serious.

Oil Advances.

Linseed Oil.—The price of linseed oil has advanced 2 cents, making present quotations $1.05 for raw and $1.08 for boiled. This high price does not surprise anyone, as the commodity is scarce and it has been known for some months that oil would be high all summer. There does not seem much prospect of immediate relief.

Turpentine Down.

Turpentine.—There has been a 2 cent decrease in turpentine, the price of which is now registered at 69 cents. This has been due to a continued slump in the price at Savannah.

White Lead Up.

White Lead.—The predicted advance has come to pass, an increase of 15 cents having been put into effect. The prevailing local quotation is now $7.30. The talk is already of the possibilities of still another advance, and it is thought locally that the new price will not stand long. The latest development is a reported scarcity of pig lead, which will certainly tend to keep the price up.

Revolution Feared.

Glass.—If the threatened revolution in Belgium becomes serious, the glass situation will be affected here. A revolution would practically mean the closing of the plants of the glass manufacturers and transportation might also be interfered with. This would mean that the Canadian importers could not secure fresh supplies from Belgium, and it is stated that present stocks would not carry them very far. The inevitable result of a shortage would be advances in price.

Putty.—The advances in putty have not interfered with the general volume of trade. Business is still brisk. Prices are as follows: Standard bulk in casks, $2.40; in 100-lb. drums, $2.55; in 25-lb. drums, $2.65; bladder in barrels, $2.80. Pure putty prices are as follows: Bulk in casks, $3.00; in 100-lb. drums, $3.40; in 25-lb. drums, $3.50; bladder in barrels, $3.40.

Prepared Paints.—Trade is exceptionally brisk, and the manufacturers are still hard pressed to meet the demand.

WINNIPEG.

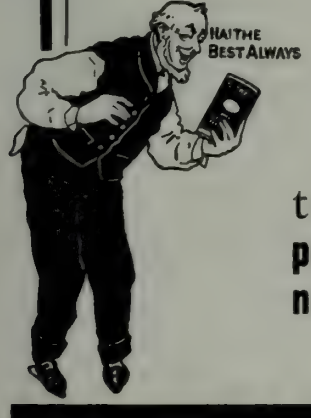
Winnipeg, June 3.—That business in paints and oils and kindred lines is exceptionally good this year is evidenced by the determination of the directorate of one of the great paint manufacturing companies doing business here to enlarge both their factory and warehouse at this point. They will double the capacity of both as quickly as the buildings can be erected, in order to be able to keep up with the ever increasing volume of Western trade.

The past week has seen brighter and warmer weather, altogether more favorable to outdoor decorative work, but the rush has hardly yet commenced. There has, however, been a very satisfactory business in indoor paints and kalsomines.

Much interest naturally centres in the flax crop, as the primary source of supply for linseed oils. The area in flax will be somewhat larger than last year, and is being planted under very favorable conditions. The crop outlook generally is excellent and optimistic reports are coming in from the whole of the West.

B-H "ENGLISH" PAINT

70% PURE WHITE LEAD – 30% PURE WHITE ZINC



100% PURE PAINT

There is Nothing Secret About It

¶ There is a formula guarantee on every can, and this formula is recognized as the "last word" in paint quality.

¶ Therefore when you stock **B-H "ENGLISH" PAINT,** you have the active support of the practical man---the man who knows---and your store becomes the paint headquarters of your town.

¶ There is a good substantial profit for the dealer in **B-H "ENGLISH" PAINT** and a strong advertising campaign back of the paint that helps you sell more paint.

¶ **B-H "ENGLISH" PAINT** will be sold in your town. If the agency is still open you have the opportunity of securing it. **Write to-day for 1912 price list and details of selling plans. Address our nearest office.**

Satisfactory paint selling can only be assured if you are handling a fresh, clean-cut and varied stock of well-ground, well-mixed, fast-color Paints.

MINERVA Paints and Paint Specialties

answer these requirements in every respect.

They are the famous British Brand, with seventy-eight years' unsullied reputation for quality.

Every can contains Full Imperial Measure—not wine or short measure.

Investigate the MINERVA Proposition. It will pay you.

Our dealer selling-helps are unique and forceful.

Ask any MINERVA Dealer.

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.
377-387 CARLAW AVENUE, TORONTO, CAN.
Established in England in 1834 (L-62)

HOW ABOUT YOUR PAINT OIL DEPARTMENT?

If you could find a way to increase the profits in your paint oil department you would at least investigate it, wouldn't you? Then why not take the time during the winter months, NOW, to investigate the

BOWSER PAINT OIL SYSTEM

We have installed systems for many of your fellow merchants—it pays them—it will pay you.

You can get one outfit or a dozen, just as your requirements demand. You don't have to invest much money but you get enormous returns.

The Bowser not only prevents all waste and over-measure, but it gives your store tone and attractiveness. It draws trade because you can give better service and cleaner oil. The pumps measure the oil directly into the customer's can—no measures nor funnels. It computes the charge and counts the gallons.

Send a card to-day for free book No. 15.

Nature has solved the problem of distribution. It uses a multitude of agents to effect the distribution of its products.

Nature does not expect every seed to fall upon fallow ground and to take root. But, it achieves a profitable percentage upon its distribution. This is all that an advertiser has to do to reap a profitable harvest on his outlay.

A Bargain

must have two essentials in order to deserve the name—it must be useful and cheap.

Hardware and Metal

offers a real bargain in its Want Ad. Department. Here, at the lowest possible cost, you can place before the very persons most interested, **hardware men and men in the allied trades,** any respectable business proposition.

Here is Proof of the Value

AN IDEAL BUNGALOW at $3,500

Those people who have ever erected houses only to find in the end that their plans were unsuitable and expenditures beyond the estimates, will be interested in an important task which MACLEAN'S MAGAZINE has undertaken in presenting an ideal type of bungalow which may be erected at a cost of about $3,600. A great many different styles were considered, but in the June number of the Magazine what is considered as the ideal style is presented together with exterior and interior illustrations, an architect's plan of the floors and a descriptive article. It is likely that many of these bungalows will be erected in Canada. Beyond question the style is most striking and it would appear inexpensive.

This Man and Your Paint Trade

The value, to the dealer, of a trade sign lies in the attitude of the buying public towards that sign. Now, for years paint buyers have associated this man with

Ramsay's Paints

on account of our advertising and have come to look for him in the stores where they would buy paint because of the quality in every can of the paint he stands for.

Better arrange to have him in your store. Write us, we'll attend to it.

Below is One of a Series of Sherwin-Williams Advertisements

now appearing in the leading Canadian Farm Journals and Weekly Newspapers. This is the kind of advertising which is creating increased business for the dealer who handles Sherwin-Williams Paints and Varnishes.

A farm that looks prosperous is prosperous. The wise use of paint and varnish adds years to the life of buildings, wagons and implements, and saves you a big yearly loss from rust and decay. Whatever your paint or varnish need around your farm or home, there is a high quality Sherwin-Williams Paint or Varnish that will effectually protect your property.

The Farmhouse will last longer and look better, protected with SWP, Sherwin-Williams Paint, Prepared. Contains only pure lead, pure zinc, pure linseed oil, and the necessary turpentine, driers, and coloring pigments, mixed and ground in the correct scientific proportions by powerful machinery. Look for the "Cover the Earth" trade-mark shown below.

The Buggy properly painted will be in service years after the neglected buggy is past repair. Sherwin-Williams Buggy Paint made in the 9 best colors, will make the saving for you.

The Wagon, The Plow, The Reaper, The Binder and all other tools and vehicles decay and rust when left unpainted. On such use Sherwin-Williams Wagon and Implement Paint, easy spreading, economical and long wearing.

Windmills, Metal Roofs, etc. need special protection. Sherwin-Williams Metalastic is especially made to prevent the decay and rust of metal surfaces.

Barns, Sheds and other buildings of rough lumber can be durably protected by the use of Sherwin-Williams Barn Red—Spreads easily, covers well and resists the weather.

Bridges, Fences and Roofs deserve protection. The refined Creosote Oil in Sherwin-Williams Creosote Paint both preserves and protects at moderate cost.

Floors and Stairs need special attention. The ten handsome shades of Sherwin-Williams Inside Floor Paint are easy to apply, dry quickly, and stand hard wear.

Inside the House Sherwin-Williams Brighten-Up Finishes supply a paint, varnish, stain or enamel for every possible purpose. Write for a complete descriptive booklet.

GREATER SALES-GREATER-SATISFACTION-GREATER—PROFIT

It is the quality the manufacturer puts into his paint that gives the greater satisfaction — that makes greater sales possible, and returns the greater profits to the paint dealer. The dealer who handles

Martin-Senour Paint
100% Pure

finds his business growing as a result of the presence of the quality of *lasting service, non-fading color, luster, free flowing, surface covering capacity* put into paint by its makers. If you want the greater sales and the greater profits that come as a reward for greater satisfaction, sell Martin-Senour Paints. Don't put off writing for the agency

Railroads use Dougall Varnish

Why do you suppose the railroads use more DOUGALL VARNISH than any other. The reason is very simple.

The passenger coaches are subject to all kinds of weather. Extremes of heat and cold, rain, wind, snow, etc. Therefore the varnish used must be one which will wear well; one which will not crack, peel or blister.

DOUGALL VARNISH IS THE KIND

Don't think that the railroads have not tried any other. They have probably tried every make, and the result is that they buy more DOUGALL VARNISH than any other. This is because DOUGALL VARNISH is

THE VARNISH THAT LASTS LONGEST

Only 20 lbs. Pressure Required

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

BERRY BROTHERS' CELEBRATED
TRADE MARK

Quality plus Advertising plus You

These are the three biggest factors in the success of Berry Brothers' Varnishes.

They are the three things we center our attention upon above all others.

We believe in the DEALER. We recognize his importance in the success of our business.

And we believe the best suppport we can give him is to produce good varnish and make it known to the public by big advertising.

That's why you and your trade see the good, familiar Berry Brothers' label standing out prominently in the pages of the leading magazines.

Is that same label prominent on your shelves?

Berry Brothers' Business Builders

The Big-4 with which every dealer can most easily satisfy the quality-demands of his trade.

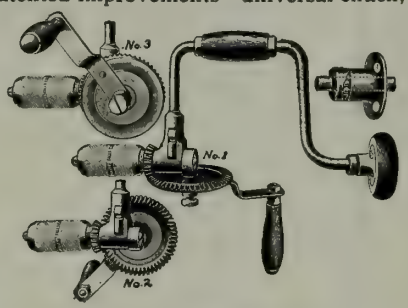
This

Drill Brace No. 192



Makes Difficult Boring Easy

The gear as shown by illustration is attached or detached by turning a thumb screw, but what is not shown is that when set it is as rigid as if keyed on. Its possible adjustment to three positions gives the user 100% efficiency in any corner or in any position or angle.

Gear Attached or Detached by Thumb Screw

The ratchet is an improved device so arranged that both dogs can be thrown out of mesh at the same time, allowing free operation of drill gears.

With drill gear detached, the brace is our regular 10 inch Sweep tool with all its patented improvements—universal chuck, taking all sizes and shapes of shanks patent ratchet, non-splitting free-acting centre Handle and ball bearing head.

Adjustable to Any Position

Of fine appearance and works perfectly

We both lose money if YOU are not a FORD dealer

We are spending large amounts of money to help you sell Ford Auger Bits. Our magazine advertising, together with our personal letters to carpenters, electricians, mechanics, etc., reach practically every Auger Bit user in the country.

We're telling them why they should use **FORD** Bits — just wherein they're superior to all others, showing how better results are obtained through their use, and asking them to call for FORD Bits by name.

We need YOU—
we want YOU

You'll find FORD Bits easy and profitable to handle, because our advertising makes sales easy and the lasting satisfaction that every **FORD BIT** gives makes each sale profitable. A Ford buyer is a steady customer.

You run no risk in handling Ford Bits—each one is thoroughly guaranteed—guaranteed on a money-back basis.

You can help us—we can and will help you.

Let's get together.

We'll promptly send you samples, catalog and name of nearest jobber.

FIX UP YOUR CHIMNEYS

Even the best stove or furnace will be unsatisfactory if the chimney does not draw well. But the

"Zephyr Ventilator"

will give a good draft to any chimney. It will even allow the burning of soft coal in the stove, with good results.

We want you to sell the "Zephyr Ventilator" in your town. There is money in it, and the satisfaction that it gives will bring you new customers. **The "Zephyr"** cannot be excelled for ventilating the rooms of **Clubs, Steam Laundries,** etc. **The "Zephyr" makes high chimneys unnecessary.**

Montreal, Dec. 4th, 1905
J. W. Harris Mfg. Co., Ltd.
Montreal, Que.
Gentlemen:
It pleases me to be in a position to state that the "Zephyr" Ventilator placed on my chimney is giving me the greatest satisfaction.
The smoke which we used to have in the house has completely disappeared, owing to the good work of your "Zephyr" Ventilator.
I remain, gentlemen,
Yours truly,
T. A. GAUTHIER,
128 St. Elizabeth St.

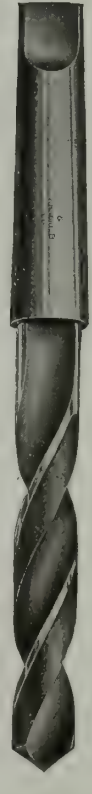
COWAN & BRITTON, GANANOQUE, ONTARIO

Long Service Is A Natural Result Of The "Twisted-While-Hot" Process

It must be annoying to the average drill user to have drills made from well-known brands of steel fall down on the job. He wants efficiency and can't get it because it's milled or ground away in the process of manufacture.

"Hercules" High Speed Twisted Drills

are made from a High Percentage Vanadium High Speed Steel under the only "twisted-while-hot" process that retains all the strength of the steel in the finished drill. The grain of the steel is undisturbed, insuring longer edge-holding and greater resistance to the strains of the metals having different degrees of hardness.



The taper shanks, usually one size larger than ordinary, prevent tag troubles and give a greater driving power because the drill fits into the chuck firmly and in the center.

Your jobber will supply them or you can send order direct. Send for Catalog 74-B.

The Mechanic Special Service Ladder

This ladder is all that its name implies and is highly prized for use in the shop or wherever a handy ladder suitable to sustain a great weight is required. The legs are connected by rounds so that one or more may make use of the ladder at one time, and the rounds and steps are staggered so that a plank can be placed through and find support every six inches. The ears are of malleable iron and steps are trussed.

If you want to increase your profits, that ladder will help you.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

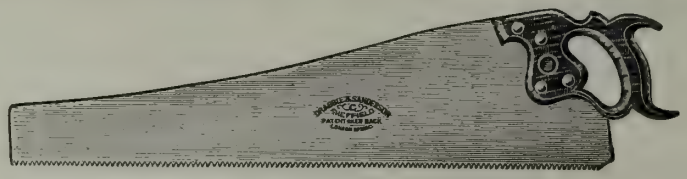
"ACME" are the strongest and sharpest low-priced Shears and Scissors on the market.

Why were 15,000 pairs of Acme Shears sold daily 5 years ago; and why are 30,000 pairs of Acme Shears sold daily to-day?
Because "Acme" on a shear or scissor spells **satisfaction** to the **customer** at a **low price** and a **handsome profit to the dealer** with greatly increased sales.
Special Representatives, Wiebusch & Hilger, Ltd., New York City.
MR. DEALER: Write your jobber to-day for prices on the "Acme" line, supplement your high-priced shears with "Acme" shears and scissors and watch the gratifying results.
Jobbers should write for our W-2 Catalogue, illustrating the most complete line of shears and scissors manufactured.



The No. 701 Oval Steel Screw Straight Trimmer is one of our newest patterns.

NIP-IT

TRADE MARK REGD.

STRAWBERRY HULLER

PATD. DEC. 18, 1906.

Strawberries and Flies

Preserve the one and Exterminate the Other.

"Nip-It" and "Canada" Fly Killers are essential adjuncts of every kitchen at th s season of the year.

By using a "Nip-It" the hull is neatly removed without spoiling the shape of the fruit or soiling the fingers.

The anti-fly crusaders throughout the continent have adopted the Slogan "Swat the Fly," and the "Canada" fills all requirements perfectly. The edges being bound with soft velvet corduroy, it will injure nothing except the fly, which it kills instantly, wiihout squashing.

The "Canada" can be used on any clean surface, such as table-cloths or wall paper, without danger of soiling it, and it will not break glass.

Packed one dozen in a box—one gross in a case.

We are also manufacturers of the "Balloon Fly Trap," which is the form of trap advocated by the best authorities on fly-extermination.

Packed, nested one dozen in a box—one gross in a case.

THE "WANT AD."

The "want ad." has grown from a little used force in business life, into one of the great necessities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The "want ad." gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

Not an Enterprise for the "Quitter"

¶ "If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom.

¶ "He must know before he begins it that he must spend money—lots of it.

¶ "Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.

¶ "Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

TWO CENTS PER WORD

You can talk across the continent for two cents per word with a Want Ad. in this paper.

Why Not Sell the BEST Fence?

When you sell a fence your customer holds *you* responsible for its quality—not the maker. So why not sell the fence that will satisfy your customers and bring them back for more? Read what some dealers have to say about the

Peerless Fence Saves Expense

There is no fault to find with your fence. the fencing I put up four years ago is just as good as the day I put it up, showing no sign of rust and giving good satisfaction. It is an A No. 1 Fence. The **PEERLESS** around here stands the test better than any other make that I have seen.—John Mason, Spring Brook.

I have been well pleased with all the wire I have received from you. My customers are all highly pleased with all the **PEERLESS** fencing they have received from me, and although opposition is very strong in the community, **PEERLESS** Fencing is taking the lead.—Wm. F. Mills, Wheatley.

I must honestly confess I have found **PEERLESS** Fencing, once stretched, perfectly satisfactory. I have never seen any rust on it yet, nor have I received one complaint from the many different men I have sold wire to.—J. H. Craig, Metcalfe.

We manufacture farm and ornamental gates, lawn, farm and poultry fences of a quality that will build up good business for you. Write for particulars.

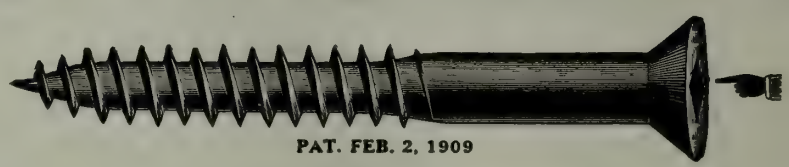
There Are Lots of Men With $70.00

Quite a few go to your store and could be tempted by a "Ross" High Velocity Rifle.



In fact every sportsman, who has the price, will look longingly at this arm and require very little coaxing to buy it.

And this one sale is not a bad day's work!

If you have not any in stock, write at once for discounts and full paticulars.

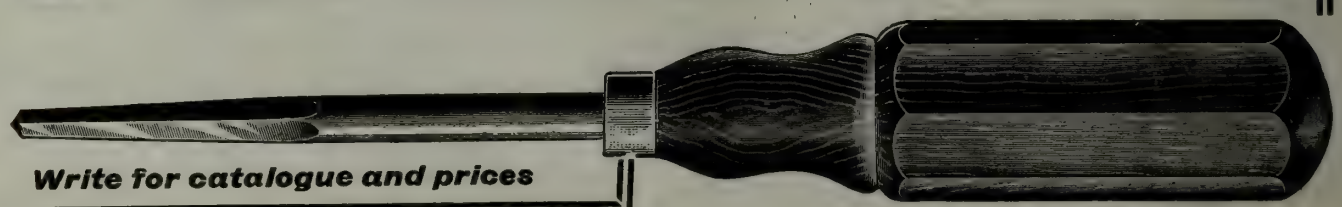
SOCKET HEAD

WOOD SCREWS



have a new and very important feature in the square hole. It is a feature that wood workers are quick to notice, as it not only preserves the screw, but also saves much of their valuable time, as it does away with all possibiliity of the screw driver slipping. It is certain to create a large demand in your vicinity after once introduced.

We also manufacture Hand Drivers, Yankee Bits, Brace Bits, Rivets, Burrs, washers, Nails, Wire and other high grade products.

STERNAU SELF-CLEANING REVERSIBLE FILTER

This filter removes the animal or vegetable matter which all drinking water has to a more or less degree, and renders the water pure and clear as crystal.

The Most Practical and Sanitary Filter Made

By reversing daily without removing from the faucet the filter is kept clean—a feature no other filter has.

"At last we can have sparklingly clear drinking water free from disease-breeding germs and impurities."

MADE BY

S. STERNAU & CO.

NEW YORK

The Sternau Self-Cleaning Reversible Filter will appeal to your trade, for it guards the health

All drinking water should be filtered, for even though the water may appear clear it is not necessarily pure.
Some say to boil the water but this makes the water both flat and impalatable.
Much disease is caused by not filtering the drinking water.
Therefore it behooves everyone to drink only filtered water, which can be had by using the

STERNAU [SELF-CLEANNIG REVERSIBLE FILTER

THE
STERNAU SELF-CLEANING REVERSIBLE FILTER

is superior to ordinary filters in that it is **self-cleaning**—a patented feature fulfilling a longfelt want.
By reversing the filter every day without taking it apart or off the faucet and then letting the water run through the filter until the water comes out clear, all accumulation is removed. Thus the filter is kept clean.

The filter is neatly put up in a carton of which one dozen are packed in a very attractive display box.

Let us send you further particulars about the filter and other seasonable specialties.

Big Ben Store Helps

In order to enable Canadian dealers to get the maximum benefit from the Big Ben campaign now running in Canadian magazines, we are packing Big Ben specially for Canadian trade, six in a carton with a full set of store selling helps (two posters, two show cards, two metal signs.)

On an order for 12 we add a solid mahogany display stand. On an order for 24 or more, we print your name on dials, give the posters, display stand, and a beautiful metal sign lithographed in five colors.

Big Ben and his selling helps are being carried in stock by 54 wholesale Canadian distributors. We will be glad to let you have their names upon request. Any will tell you Big Ben is the best made and the best selling alarm that's ever been put out.

In broken and dozen lots, $2.15 less 2%. In lots of 24, $2.05 less 2%.

The Western Clock Co., La Salle, Ill.

Eeh-Nis-Kim

Be a good Indian—be a promoter of good fellowship among hardwaremen. Every dealer and salesman who handles **CARBORUNDUM SHARPENING STONES** is eligible to become a brave in the great tribe. Write for an Application Blank. Make your plans now to spend your outing at the big Indian camp on the banks of the Niagara, July and August. It will be a heap big time. A postal to the Great Sachem will bring the details.

Be sure you have a complete stock of Carborundum Goods, the demand is growing every day.

The Carborundum Co., NIAGARA FALLS, N.Y.

THE LIGHTNING AND BLIZZARD

FREEZERS

stand ready to serve you in the same satisfactory manner in which they have served both trade and consumer for over a quarter of a century. The construction is of the same high class. They run easy, freeze quickly and take the smallest amount of ice and salt of any freezer made. The extensive advertising from season to season has created a permanent demand. They bring trade and help you keep it.

Better let your Jobber quote at once.

NORTH BROS. MFG. CO.

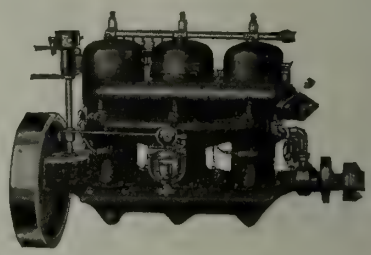
MOTOR BOATING

Will be more popular than ever this season



THIS year promises to be a record year in the motor boat field. When the season opens there will be a large number of new boats, and old boats fixed up. What are you doing to reap the benefit of this trade? Every wide-awake dealer should stock motor boat supplies and marine hardware. We carry the largest stock of accessories in Canada. Our Motor Boat Accessory Catalog is ready for mailing; a card asking for Catalog H. 24 will bring it to you.

If you are interested in Marine Engines you should have our Catalog H 23.

"HECLA" WARM AIR FURNACE

It is easy for you to sell this furnace as the value of its many **exclusive features is easily understood** by every prospective furnace user.

The "Hecla" is economical in consumption of fuel, easy to operate, safe from dust, smoke and gas, and will give the greatest length of service.

The **Fused Joint** does away with all bolted or cemented joints that are employed by all other furnace manufacturers—joints that work loose and cause trouble.

In the **Fused Joint** the iron and steel are fused together at a white heat into an absolutely permanent and indestructible connection.

Fused Joints prevent the escape of gases and permit a more sanitary condition of the atmosphere.

Hecla Steel Ribbed Fire Pots have three times as much radiating surface as any other style of fire pot made. Cannot get red hot and are practically everlasting.

Our Individual Grate Bars enable the user to keep the fire clean without the use of a poker.

"HECLA" INDIVIDUAL GRATE BARS

Letting The Buyer Know

Time was when rope was "just rope" to the customer but times long ago changed and for years thousands of satisfied users have demanded

PLYMOUTH ROPE

"The Rope You Can Trust"

Today the most desirable buyers—the permanent customer sort—are seeking out the ***Plymouth Store.*** To help progressive dealers develop more of this permanent class of trade and to make Plymouth stores widely known, we have arranged a practical advertising service, free to Plymouth dealers.

The man on the street, the buyer in office and home, every user of rope in the community can now be reached with the story of "Plymouth" and shown where to buy—at ***your*** store if you wish.

Every dealer is entitled to this service as soon as he places a stock order for Plymouth rope. Further information and name of our nearest distributor furnished upon request.

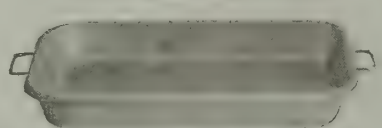
WEAR-EVER ALUMINUM TRADE MARK

"Wear-Ever" Aluminum Ware



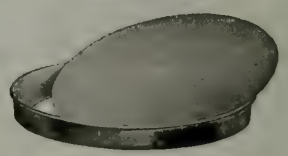
"No! They are not all the same."

"Wear-Ever" Aluminum Utensils *are different.*

Of course, aluminum is aluminum; but utensils may differ in thickness, in handles, in finish.

Thickness. They are made thick enough to prevent denting readily; thick enough to guarantee a lifetime of satisfactory service.

Handles. The handles of **"Wear-Ever"** utensils are made of the best tinned steel. Aluminum handles would become too hot—wooden handles would burn off or break. The handles of **"Wear-Ever"** utensils are gripped to the utensils by aluminum rivets with large heads. The heads are not sunk into the side of the utensil—the side remains of uniform thickness, strong enough to hold the handle on firmly for years.



Finish. The outside is polished. The inside is hardened by an electrical process which makes the metal harder, smoother, less liable to be discolored by food or water containing alkali or iron, and more easily cleaned than would be possible if the utensils were not so finished.

Replace utensils that wear out with utensils that "Wear-Ever"

Free If You Are Not Satisfied

The New Preston O. G. Square Bead Eavestroughing

We have always claimed that our eavestroughing was the best on the market, but we have gone ahead and gotten out something that is far superior to our old make. Now we can claim that we can't be beat when it comes to our eavestrough.

Some time ago we advised all the trade that we were manufacturing O. G. Square Bead eavestroughing by machinery which assured absolute uniformity in shape, but it developed that our machinery was not heavy enough to produce as sharp a bead as we desired. We have now perfected and patented automatic steel dies to fit our large power press and we now guarantee a trough superior in shape, appearance and fit to any other on the market.

You can save time and solder in the erection of this eavetrough FOR EVERY PIECE IS EXACTLY THE SAME and fits snug and tight. There are more profits for you and more satisfaction if you use our make. See our special offer below and take advantage of it at once.

Cut out this ad. and mail it to us to-day with your order for 250 feet of our new O. G. S. B. Eavestrough and if it is not exactly as we represent it we will make you a present of it. This offer is good for thirty days.

Toolsmiths

GREENFIELD, MASS., U.S.A.

Demonstration, not Conversation, sells Tobin Guns. Emerson, shrewd Yankee philosopher, that he was, said:—"Don't argue, illustrate." It doesn't require argument to convince you that this is right. You see it illustrated from your own position behind the counter day after day. Demonstration is the powerful sales argument the hardware dealer employs who sells

Tobin
Simplex Guns

He doesn't need to employ much conversation.

The gun is able to do some plain, forceful and convincing sales talk on its own account.

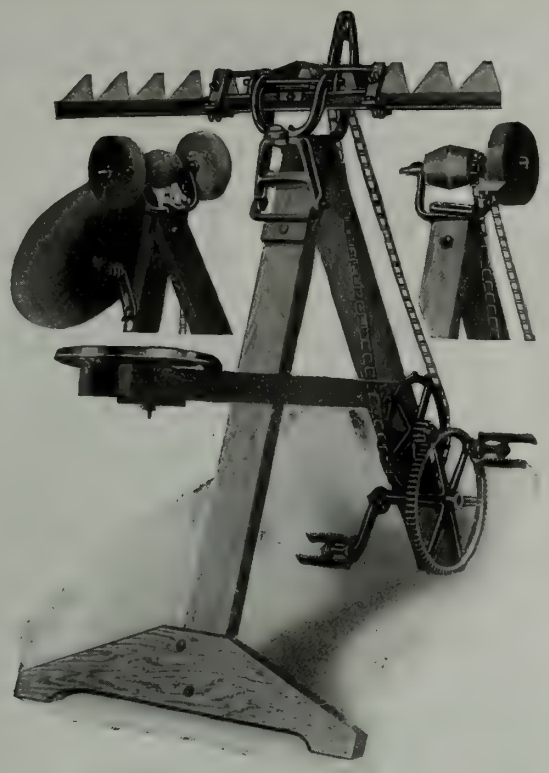
From the Dealer's point of view, the Tobin Simplex Gun offers strong inducements. First, there is the gun itself—strong, handsome in appearance and most modern in design. Next—liberal, straightforward advertising has made the Tobin Simplex Gun well and favorably known. Then, the money back guarantee that absolutely protects both you and your customer. Finally, there's our one hand-in-glove policy of working for, with and in the interests of the dealers, first, last and all the time.
There are other advantages, but these will do for now.

Now for the Customer's side.

Canadian-made, and thus carrying no heavy duty, the Tobin Simplex Gun is everything that a good gun ought to be. Light, strong, every bolt and spring made of the finest tested steel. Its barrels are as true in alignment and bore as human skill can make them—perfectly balanced so that aiming is a matter of instinct instead of effort. For instance, the machine file-cut rib, which prevents the aim-destroying glare of polished metal. The customer has only to examine the Tobin Gun, inspect its simplicity of construction, operate its working parts, compare it detail by detail with other guns he has known to become satisfied that the Tobin is indeed a gun to challenge the admiration and retain the pride of any sportsman.

We want every dealer

To offer his customer our unqualified guarantee "Money back unless satisfied," no argument or hesitation, no exporting or importing if a change is required. No other gun offers you these advantages.



Our Advertising is Bringing Business.

Owing to the advertising we are doing, we are constantly receiving enquiries for Tobin Guns from all parts of the country where we have no dealer representative. Just last week, for example, a man in ———— sent in the price for a Tobin without even examining the gun, to our knowledge. As we had no dealer where he was we had to fill the order direct. Otherwise we would have given credit to the Tobin dealer in the district.

Write to-day for full particulars of the liberal terms we offer agents.—Simply address

"Farm Special" for grinding all Farm Tools.

No. 63.

Shaft-drive for mechanics and farmers—foot and engine power. No. 273.

LUTHER

Dimo-Grit

TOOL GRINDERS

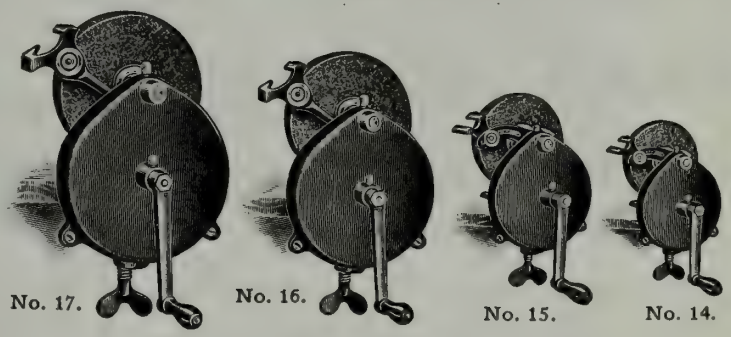
The Luther Line includes 32 types of grinders to meet every tool sharpening need for mechanics, farmers, ranchers, machinists, carpenters and every class of tool-users. Every grinder is scientifically designed, strongly built and fully protected by patents.

25 Times Faster Than Grindstones

Dimo-Grit, the new artificial diamond abrasive, best for steel, cuts hardest steel as emery cuts copper. It peels steel away in tiny shavings instead of wearing it away like emery or the grindstone. 25 times faster than the grindstone, 10 times more efficient than emery. No need of cooling with water—no danger of drawing temper.

Shaft Drive Grinders for Farmers and Mechanics.

The Luther shaft-drive grinder is built entirely of steel and iron, with shaft drive in dust-proof housing. It sells in 4 outfits, including one for farmers and one for mechanics. The farmers' outfit includes disc and sickle grinding attachments, and other tool rests for all grinding of farm tools. The mechanics' outfit includes plane-bit and twist drill sharpening attachments, and provides for every sharpening and polishing need. Extra attachments transfer this grinder into jig and circle saws, drill, forge, lathe, milk tester, etc.



Good Profits for Dealers.

The fast-cutting Dimo-Grit wheels, the superior design and construction of Luther grinders enable dealers to make quick sales. Profits are good, and we give price protection. Write for full information about complete line.

THE WARM WEATHER CAMPAIGN

The Necessity for Articles Which Ensure Protection from Heat is Now Being Felt—Dealers Should Feature These Lines Strongly—A Suggestion for a Window Display.

It was Abraham Lincoln who remarked that, "You can't fool all the people all the time." Neither is it possible to suit all the people all the time—or in fact any part of the time. Weather, for instance, is never to the liking of all. It "is too cold" or it is "too hot." The days that are "just right" are few and far between, and they are spoiled by the croaker who remarks that "it looks like rain."

Yet even with its many changes—perhaps because of its many changes— the weather is a pretty good friend of the hardware man. Take the present season. It has been cold and wet. Not good at all for the sale of rubber hose, yet the abundant rain has brought the grass along in fine shape, and lawn mowers have been in great demand. It is an ill-wind which has blown lawn mowers good.

Warm Weather Means a Change.

But the cold weather of the spring will soon be but a memory. Already there have been a few wilting days. Days when the bath was the only place of which one could think with comfort. And there will be more such days. They are indeed upon us, and the hardwareman would do well to prepare for these. Every little weather change requires a movement all its own. The coming of winter means the bringing forward of skates. The advent of the hot weather means a rear position for many of the winter and early spring lines, and a prominent forward position for the hot weather goods.

Hot weather affects different people differently. The majority it makes hot in mind as in body, and all it fills with a desire to get in a cool spot—the open air for prefernce. It is such general desires as this which gives the hardware man his chance. If he can supply something which will make it possible for people to keep out of doors and to keep cool when they are there, he is going to have little trouble in getting the people to part with their money for these things.

Verandah Offers a Chance.

Many homes have verandahs, and naturally these are the living rooms in this weather. Only the sun, indeed, detracts from their popularity. But though most people remember that Joshua had little success when he ordered the sun to stand, and therefore do not attempt to interfere with nature, they also remember that the sun is only going to shine on one verandah for a part of the day. While the sun is in the other quarter the verandah is going to be popular, and while the verandah is popular, chairs, hammocks, and Japanese mats will be popular, too. These are lines which are handled by many hardwaremen. They might well be handled by many more, for they not only yield a profit, but they make the store attractive.

Movement to Back Garden.

Many people are fortunate enough to have not only verandahs but gardens—it is surprising what a miniature plot of land may be dignified with the name of garden in these days of high values. Much is heard about the movement back to the land, but just at present it is the movement to the back garden which is more important. Certainly this is important for the hardwareman. It not only gives him an opportunity to sell spades, clippers, trowels, and a rake or two; but it makes another opportunity to sell garden furniture, rustic chairs, hammocks, and the various covered swings which are selling at a moderate rate at last. The verandah is popular, but the back garden is a veritable haven. To make it more beautiful, and to enable him to enjoy it more, the fortunate possessor will willingly spend a few dollars. In spending them he will be gaining great benefit, and incidentally the dealer who sells to him will benefit too.

Window Suggestions.

Those who are handling hammocks and similar goods would do well to bring them to the front. Indeed there could hardly be a more attractive window, just at present, than one in which a hammock was hung. A window, to be effective need not always show a wide variety of lines. A window is doing its work if it throws out a suggestion. To arrange a trim like the corner of a back garden, with a hammock strung from posts, and with the suggestion of a croquet set, and perhaps a lawn mower in one corner, would be very effective. It might take a little time to prepare, but it would make people think more of their own back yards. They would see what a hammock or a chair would do to make these more pleasant for the elder members of the family. They would realize that a croquet set would delight the children, and indeed the elders—they would be ready to buy.

But these are things for the outside of the house. For the house itself there are lines which will be especially wanted in the coming few weeks. Generally speaking, any thing which keeps the house cool will be in demand. Window shades are becoming more and more popular, and those hardware men who handle them are reaping a profit. Screen doors have become practically necessities. These allow any breeze which may be blowing to reach the inside of the house, and at the same time they keep out flies and give that feeling of security against sneak thieves which is necessary.

Screen windows too, are needed now. The weather to date has not made these seem necessary, but at any time the great heat will come. So will the flies and the mosquitos. People will want fresh air in their bed rooms, and they will want to escape from the flies and the mosquitos. In short they must have the screen windows. These lines—both the doors and the windows—occupy quite a bit of floor room, but they repay display. For a month or six weeks at this season they might well be brought to the front.

The Dealer's Part.

There are many things required inside the house in the hot months. All need not be mentioned here. A score or more will come to the mind of every dealer. There are refrigerators—articles which must sell in the next few weeks if they are to sell at all. There are smaller, and less expensive lines, ice carriers, lemon squeezers, ice choppers, and ice cream freezers. For all of these the demand will be large if the dealer does his part. But people need to have these articles brought to their atention before they will buy. Take ice carriers for instance. How many may be seen coming out after the block of ice which the ice man has carelessly slid along the sidewalk to their door. They pick it up in their hands, then rush through the house to the kitchen, and there drop the ice—probably first upon the floor, and later into a bucket of water.

Display Shows the Need.

Yet for a very small outlay could be bought a pair of carriers — carriers which would enable the ice to be taken from the front steps to the ice box without ever being touched with the hands. How many would be willing to spend a little money for such a time-saving and trouble saving device. All that is necessary, indeed, to secure sales is to bring the article forward—let the people see the article and they will see their need of it.

Where Half Holidays Are Observed

A Partial List of the Places Where Half Holidays are Held in Ontario—The Days When the Stores are Closed—Travelers Should Clip Out and Keep This List.

The half holiday custom has some drawbacks from the standpoint of the traveling salesman. He never knows when he is going to strike a town which will be "closed for the day." If all towns celebrated their commercial half holiday on the same day, it would be all right. But they don't. In some places the stores close on Tuesdays, in others it is Wednesday, and in others still, Thursday. Traveling becomes more or less of a gamble.

A hardware traveler recites his experience of one week last year. He struck one town on Wednesday afternoon and found that the stores had been closed. It was, of course, a case of "nothing doing" for him. He struck out for a neighboring town the next morning, getting in at 10.30. He secured his room, looked after his samples and got to the first store at 11 o'clock. "Pretty busy just now," asserted the proprietor. "We close at 1, you know. This is our half holiday." He got in two calls that day. Friday he landed in a third town and found it closed up.

The remedy for this condition would be the setting of a uniform day. Wednesday is most commonly chosen. Why should it not be made general?

Until this step is taken, however, the traveling man will be compelled to map out his itinerary with a careful eye to avoid closed towns. In order to assist him in this, Hardware and Metal has made an effort to secure a list of the towns in Ontario where half holidays are observed, and the day selected in each case. Traveling men are advised to clip this list out. They will find it invaluable for reference, and it will undoubtedly save them many annoying delays.

The List.

Alexandria.—No half holiday. Stores close at 7 p.m. every day except Saturdays.

Bracebridge.—No half holiday.

Blenheim.—Half holiday on Wednesdays from June 15 to September 15.

Brantford.—Half holiday on Wednesdays during June, July and August. (Butchers and grocers only.)

Brockville.—Half holiday on Wednesdays during July and August.

Bowmanville.—Half holiday on Wednesdays during June, July and August.

Brampton.—Nothing decided yet.

Berlin.—Half holiday on Wednesdays.

Bridgeburg.—No half holiday.

Cobalt.—Stores close at 7 o'clock on Tuesdays, Thursdays and Fridays. An agitation for a half holiday but nothing settled.

Colborne. — Half holiday on Thursdays during July and August. Stores close at 12 o'clock.

Chesley.—No half holiday.

Collingwood.—No half holiday. Stores close at 6.30 every evening except Saturdays.

Deseronto.—Half holiday on Wednesdays during July and August.

Dresden.—No half holiday.

Dundas.—Half holiday on Wednesdays during June, July and August.

Havelock.—Half holiday on Wednesdays during July and August.

Hespeler.—Half holiday on Wednesdays during June, July and August.

Hamilton.—Half holiday on Wednesdays during June, July and August.

Hensall.—No half holiday.

Hawkesbury.—No half holiday.

Ingersoll.—Agitation for half holiday on Thursday during July and August.

Kingsville.—Half holiday on Thursdays during summer months. Stores close at 6 p.m. during Tuesdays and Thursdays through the whole year.

Leamington.—Half holiday on Fridays until September 1.

London.—Half holiday on Wednesdays during June, July and August.

Merritton. — Wednesday afternoons during June, July and August.

Midland.—No half holiday.

Mount Forest. — No half holidays. Close at 6 o'clock every day except Wednesdays and Saturdays.

North Bay. — Agitation to close on Wednesdays during July and August. Not yet decided upon.

Niagara Falls.—No half holidays, being an excursion point.

Newmarket.—Half holiday on Wednesdays during July and August.

Ottawa.—Many merchants make a practice of closing their places of business on Saturday afternoons for two months in the summer.

Orangeville.—Half holiday on Wednesdays during July and August.

Peterboro.—Half holiday on Thursday afternoons.

Port Credit.—Half holiday on Wednesdays during June, July and August.

Port Colborne.—An agitation on foot for half holidays. Nothing decided yet.

A more complete list will be published later.

A System Which Insures a Proper Stock

By the use of a Simple Card Index System a Montreal Dealer Knows How Much to Buy and How Little it is Safe to Have of Every Article—He Knows Instantly Where to Buy, When a Purchase is Necessary—He is Able to Secure a Rapid Turnover.

The question of turning over stock is one which rightly is occupying a good deal of the hardwareman's attention. But to secure the proper turnover, a careful watch must be kept upon supplies. Dealers realize this, and will therefore appreciate a few words showing how a Montreal merchant keeps tab on what he has in stock.

This man shows downstairs only samples. On the floor above he keeps his reserve stock, and when a purchase is made the article is either brought from here, or one is brought down immediately afterward to take the place of the sample which was sold. The latter course is the one which the merchant has found the best. "If I show a sample," he remarked, "and then, having made the sale, send upstairs for the article with which to fill it, the customer often becomes uneasy. It is a suspicious age, and there are a number who seem to think that the article which is brought down from upstairs is not as good as the sample, which was demonstrated. I find it better, therefore, to sell right from the samples, and replenish the samples. It is a good idea to bring down a duplicate from upstairs while the customer is still waiting, giving him the sample, and putting the duplicate in its place. This makes the man see that the goods are all the same —a fact which some people seem loath to believe."

Provides Against Three Things.

But this is a digression. The point in question is that the dealer keeps his stock upstairs, and only samples on the ground floor. Now the dealer wants to provide against several things. He wants to secure a rapid turnover. He wants to guard against too large a stock of any one article. He wants to guard against running out of stock, for there is nothing which so discredits a store in the mind of a customer as to hear —"no, we are just out of that."

To secure these three aims—to guarantee a satisfactory turnover and a small enough and yet large enough supply—this Montreal dealer has adopted something in the nature of a card index system.

He goes over his stock carefully—a tremendous task, but one which need not be done all at once. He puts on each card the name of the article. He puts down when the present supply was purchased, then by reason of his general knowledge of the business, or by careful reference to past invoices, he determines whether the article customarily moves rapidly or slowly. Upon this much depends.

Needs a Safe Supply.

If the stock moves rapidly, for instance, it is essential that the dealer should always keep on hand a large supply. Otherwise a short delay in the delivery of an order might leave him completely out of the article. That would be bad.

So, in the case of a line which turns over speedily, the dealer places a large figure as the maximum supply which he wants on hand. He also puts a fair sized figure as the minimum supply which he may have and still be safe. This minimum supply is the danger mark. As the stock nears that figure the dealer must prepare to buy again.

Watches Fall in Stocks.

Here is where his system works well. The goods, as has been said, are stocked upstairs. A man is in charge there. It is his duty to send down what goods are wanted below, and it is his duty to keep track of the stock. Each line has a compartment of its own, and upon this is fixed a duplicate of the card which the dealer has made out— a duplicate which states the maximum and the minimum supply wanted. As the stock falls low, the man in charge makes a note of this. When it approaches the minimum amount he reports to the manager. The manager acts promptly. He refers to the card dealing with this article. He sees the figure showing the minimum and the maximum stocks wanted. He knows the supply has fallen near the danger mark. He therefore subtracts the minimum supply wanted from the maximum, and he has the amount of goods which he had better order. The name of the manufacturer or jobber from whom the goods are secured is also shown upon the card, so the manager need waste no time referring to invoices. He sends his order to the concern whose name appears so prominently.

Works for Small Businesses.

Hardwaremen who are carrying on a comparatively small business may claim that such a system of keeping tab on stock is impossible for them. It isn't. They might be compelled to modify the system in some particulars, but the general principle can be worked by large and small dealer alike. It would be a fine system for many to adopt, too.

The small dealer will hardly be likely to keep his main supply upstairs, and samples only on the ground floor. He will not be able to spare a man to look after the stock. But is this a reason why no one should look after the stock? There will be some arrangement of this. If it is not kept upstairs, it will be downstairs, and presumably the various lines will be kept together. If they are not they should be, and the dealer who wants to make the best progress will take immediate steps to bring order out of what must be chaos.

Makes Small Sum Go Far.

The blanks may be filled out for this stock just as easily as for the stock

(Continued on page 49)

ARTICLE . . . . . SIZE, KIND OR NUMBER

FROM . . . . . SHIPPING ROUTE

DATE		QUANTITY	LIST	DISC.	NET	IMP. %	COST LAID DOWN	SELLING PRICE	REMARKS

MAXIMUM QUANTITY . . . . . MINIMUM QUANTITY . . . . .

A blank such as is used by the Montreal dealer to keep track of his stock. Note that the information here given shows him exactly how rapidly the goods are moving; advises him of the laid down cost; and enables him to fix the selling price without any difficult figuring, providing conditions are unchanged.

PUBLISHED EVERY SATURDAY.

MAKE USE OF ADVERTISEMENTS.

The trade newspaper differs from other publications in one very important essential. Not only does the reading matter have a direct and practical interest for the reader, but every advertisement has the same. There is quite as much inducement for the trade newspaper subscriber to read the advertising sections as the editorial pages. This fact is pretty widely recognized, and most hardwaremen look Hardware and Metal through from cover to cover.

The information obtained in this way should not be lost. If a dealer reads his trade paper every week he undoubtedly benefits, but unless he takes some steps to retain the information, he does not realize the fullest benefit. Some system of tabulating information is needed. We suggest that readers of Hardware and Metal study the advertising pages carefully and mark with a blue pencil everything which especially interests them. Clip out everything marked and paste the clippings in a scrap book. Better still, have several scrap books each devoted to some branch of the business. By this system it will be found easy to turn up any information desired.

The advantages of the idea will be patent to all. The dealer who follows it will have information with reference to every branch of hardware ready for reference at any time. The same idea might be used in the preservation of reading matter. Any article or item which has a point of particular interest might be clipped out and pasted in a scrap book for use in the future. Many window dressers find this to be a valuable idea. They keep every window display shown and thus secure ideas for their own work.

THE MAN WHO STOOD STILL.

A story is told of a southern merchant, who, after the war remained just where he had been when the war commenced. He continued to carry on business in the same easy-going way. He continued to show the same calicos and the same ribbons. All about him there was advancement, but he closed his eyes deliberately to this. He did not mark time, but stood still. Marking time denotes readiness to advance; but whatever in this man had urged advancement was atrophied. He stood still.

Years passed. Still the man showed the calicos and the ribbons. Still he conducted business in the same old way—or would have, had business come. Finally some business did come, for he fell so far behind the procession that he became an antique. His store was pointed out to strangers in the city who visited it, and bought a little out of curiosity.

It is a strange tale—the tale of a man who forced himself to believe that the civil war marked the end of all things which could influence him. But it is stranger to hear that there are dealers to-day who have adopted this stand-still policy. "There are plenty such men even in Canada," states a dealer who has traveled far.

If these men stand still long enough, they may—like the southern merchant—make their stores famous as fossils of an earlier age; but they run a risk. They may meet the fate of the Irishman's horse. You remember the Irishman wanted to get his horse to the point where it could live without eating. He worked hard at this, and just got the horse to the desired point when the pesky animal spoiled it all by dying.

To-day there is little use for the man who stands still. There are times when it is wise to mark time, until it becomes quite evident in which direction the advance should be made; but standing still is only appropriate beside a grave.

WHERE PROFITS ARE OBTAINED.

It is one of the main objects of every dealer to buy as economically as he can. To assist him in this, the hardwareman avails himself of all the information he can secure. If he is wise, he pays close attention to the weekly market reports in Hardware and Metal, where price changes are recorded and accurate forecasts given.

Dealers who have watched our market reports of recent date and have made use of the information contained have undoubtedly benefited financially. Here are a few cases in point:

Repeated advances in white lead have been predicted, and events have borne out the assertions made. White lead has been going up steadily, and may reach higher levels yet.

Putty has been advanced in price. The advance was predicted in Hardware and Metal a month before it went into effect.

Linseed oil has reached a very high price level. This was forecasted in the market columns long ago, and buyers had plenty of time to "get in right" on the market.

THE NATIONAL STRIKE AND CANADA.

In London the call has gone out for a national strike of the dock workers. The situation is serious. A national strike would mean the tying up of many ports, for a time at least. It would mean the disturbance of all shipping from England; and would be the cause of a tremendous loss of money, by ship owners, by British manufacturers, by the strikers themselves, and by Canadian handlers among others.

The early answer of the dock workers outside of London has not been what the strike leaders could wish. Only a few ports have seen the commencement of sympathy strikes. Even in London the dock workers do not appear to be meeting the success which they desire. Ten thousand non-union workmen are already busy upon the docks.

The right or wrong of the strike is something which cannot well be understood in Canada. Conditions are so different. English wages seem terribly low here, but then living is low there, and a cent for cent comparison is

impossible. Neither is it possible here to appreciate the position of the owners. All that we Canadians can appreciate is the havoc which a strike brings. If national proportions are reached English products brought to Canada will have to advance. Metals, for instance, will cost more and more. They are high enough now, many of them, and it is small wonder that those closely connected with this line are hoping for an early settlement. Peace at any price seems to be their cry. Peace even if it is necessary to fight for it.

POINTED EDITORIALS.

Let there be light in the store.

* * *

Time to start a "Swat the Fly" campaign.

* * *

Minnows are now being sold in the hardware store—surely the scope is widening.

* * *

The May just ended, it is reported, was the wettest since 1883. And despite this, activity in many lines has been the greatest ever.

* * *

The price of furs affects the sale of traps. If furs are cheap, traps sell slowly. At present furs are unprecedentedly dear. A word to the wise is sufficient.

* * *

The time is now here when men get the "back to nature" impulse. Help the impulse along by featuring tents, camping outfits, fishing supplies and so on.

* * *

April showers bring May flowers. But when the showers continue through May and into June they threaten to bring poor crops. A little dry weather would be appreciated.

* * *

War is beginning on the potato bug, the woolly elm louse and all other members of the Ancient and Crawly Order of Vegetable Parasites. Start your insecticide campaign, Mr. Dealer.

* * *

When real sultry weather arrives, the average man will spare no expense in securing any thing calculated to add to his comfort—or rather, lessen his discomfort. Perspiration banishes prudence.

* * *

Soil pipe, instead of getting more plentiful is more scarce. The demand is tremendous, partially perhaps because it is expected that an advance will come. This higher level will not likely be long delayed.

* * *

Light is a great salesman. Place a line of goods where they show to advantage and the veriest tyro will dispose of them wholesale. Put them where they are in the dark and Sam Slick himself would find it hard to get buyers.

* * *

If the Belgian revolutionist wants to create a disturbance, owners of new homes in Canada may have to go without glass for a while. The world's commerce has become so closely interwoven that events often have unexpected results.

* * *

A man named Robinson has discovered in Alaska, what he believes to be a deposit of tin ore worth millions of dollars. It is expected the prospectors find will do much to bring about an extension of Alaska railroads.

Is Shortage Pending?

IS there a shortage pending in plumbing and heating supplies?

Some manufacturers are predicting most unreservedly that demand will outstrip supply before the year is over. There are already indications which bear them out in this. There is a distinct shortage in soil pipe. Iron pipe is getting scarce. Work in some cities has been held up by the lack of supplies in these lines and the demand, for soil pipe particularly, has become clamorous.

The fact of the matter is that the country has developed more rapidly than even the most sanguine and optimistic had believed possible. Canada is riding high on the crest of a wave of prosperity. Building operations are being conducted on a gigantic scale. In the west, the towns are developing into cities and the cities are becoming large centres of population, with the impetus of unprecedented growth and prosperity. In some of the eastern cities, perhaps, the building operations are not in excess of last year, but these merely serve as exceptions to prove the general rule.

The question now is whether the manufacturers and railroads have kept pace with the growth of the country. The railroads have fallen behind, as the freight congestion in all parts of the Dominion eloquently attests. And the manufacturers, though, they have increased their scope and facilities, do not seem quite capable of supplying all the demands. They are going fast but Jack Canuck is traveling in seven-league shoes.

The natural result of so much building is a much greater demand than ever before for everything pertaining to building equipment, plumbing and heating goods included. The pinch has only been felt in a few lines so far. It is learned that there is enough enamelware on hand to meet the present demand. The real demand, of course, has not yet manifested itself. That a scarcity will arise in a few months' time is not a wild guess. The conditions which have created the present shortage in soil pipe will cause a correspondingly heavy call for enamelware and for fittings of all kinds in the late summer and fall. Will the manufacturers be able to supply this demand with readiness? There is a deep-seated impression that they are going to experience difficulty in doing so. While they do not give direct confirmation to this now, the manufacturers admit that the present demand and the size of the orders booked point with surety to something resembling a scramble later in the season.

There is one satisfactory feature reflected through it all. With so much building going on, all trades will have a busy and prosperous year. The plumbing and heating trades will be actively engaged. There will be a heavy demand for building material and hardware. The hardware dealer, who also does plumbing work, will thus benefit in more ways than one. The inconveniences of a possible shortage in supply fade into insignificance in the contemplation of the prospect of so active a year's work.

More Light in the Store

The Value of Keeping the Hardware Establishment Bright and Attractive — Some of the Reasons Why Stores are Dark and Dingy and How They Can be Remedied—A Description of the Store of Geo. L. Lander & Co., Oshawa.

Let there be light.

This injunction did not apply seemingly to the hardware dealer of days gone by. The light which crept unbidden into his store was scant and fitful. It got in despite the barricade of goods built up all around. As a matter of fact, the hardware store did not require to be particularly light in those days. Men did all the shopping there and the stock carried was hardware in the strictest sense of the word.

But with the advance of the times and the widening of the scope of the business, a new order has come about. The modern store cannot be made too light. The stock requires it. The hardwareman to-day has a variety of goods which appeal to women. To secure and hold their trade he must keep his store both attractive and light, for women do not care to shop in places which are dark and forbidding in appearance. Light is necessary also to sell the stock. Cutlery, brass goods, silverware, and household utensils of all descriptions do not show to good advantage unless placed where the light reveals their qualities. On the same principle that the "silent salesman" is more effective than a wooden counter, a light store is better for business than darker quarters. A light and airy store is one big "silent salesman."

This question of light should be kept in sight in the arrangement of the interior. If any dealer has a store which is dark inside, he should "buckle right down" to the question of finding some means of making it lighter. It means dollars to him in the shape of added business.

Some of the Causes.

The lack of an open store front is often the cause of the darkness which pervades the interior of hardware stores. The modern front has wide plate glass windows, with plates above through which sufficient light enters to keep the place bright, even when the windows themselves are cased up for display purposes. It may cost what seems like a steep figure, Mr. Dealer, to tear out that antiquated front and put in one which will admit plenty of sunlight, but it will pay you in the end.

Another drawback has been the custom of hanging a confused collection of articles to the ceiling. In some hardware stores still it is impossible to see one square inch of ceiling. Everything from a shovel to a glove is suspended, making the store about as cheerful and inviting as a vault. The practice is, fortunately, dying out. Merchants now prefer to keep their ceilings clear, even if they have to show fewer goods. A few lines well displayed are better than a multitude of goods in poor order.

The chief reason for the lack of light in the hardware store, however, has been in the arrangement of the stock. The bulkiest articles were often shoved to the front, where they effectually kept all light from penetrating farther into the store. It is not an uncommon experience even nowadays to enter a store where a pillar built around with a structure of the largest goods faces the entrance and plunges the rest of the store, if not into Stygian darkness, at least into a condition of semi-gloom not at all conducive to business.

This is not necessary under any circumstances. The store may be small and the general facilities poor; it is, nevertheless, a mistaken policy to stack up goods everyhwere to the exclusion of daylight. "Talking about turning the stock," said a progressive dealer recently. "The man who has a light and bright stock turns his stock several times a year oftener than the man who does business in dingy quarters. He gets the people every time."

A Light Store.

At the head of this article an illustration is shown of a store which has this one desirable quality above all others. It is light. A person can look through the front door and see the paint tins at the back. It was laid out and stocked largely with the idea in view of admitting the daylight.

The store in question is that of Geo. L. Lander & Co., Oshawa. The front is an open one, so that plenty of light pours in. The centre is used for a selected assortment of stoves and refrigerators, and no obstruction occurs there. At the back is a large rack used for the display of paint. The shelves to the right are used for shelf hardware and to the left enamelware and kitchen utensils are shown. The counters are fitted up both at front and back with rows of self-closing bins in which are kept nails, screws, heavy hinges and similar lines.

Thus the stock is kept ready to hand, but without any evidences of crowding or obstruction of light.

A Permanent Window.

It is also interesting to note that the window to the left is permanently fitted up as a model bathroom. The walls are covered with green burlap and are paneled with a white enamel finish. The floor is covered with linoleum and a complete bathroom outfit is shown. This display serves as a permanent advertisement of the plumbing end of the business.

Geo. Lander is himself a practical plumber and he looks after the mechanical end. A large business is done in the plumbing and tinsmithing lines. Charles Lander, who has had a wide experience in shelf hardware, looks after the buying and manages the hardware department. At present they employ a staff of about twenty-five men in the store and shop.

This store presents many good features in the matter of utilization of space. The counters, as explained before, serve a valuable purpose. Every square inch of space beneath is utilized, and in this way much stock is provided for which would otherwise require room elsewhere. Many of the heavier lines are not shown, but are stored where they can be produced as occasion demands.

A Business Getter.

Light is a business getter. It brings the people into the store. It shows the goods up to advantage. It makes the place more cheerful and helps to keep the staff in that frame of mind. It is an asset which no hardwareman can afford to be without.

Camping Out Season is Now at Hand

This Means a Demand for Many Lines of Sporting Goods—Fishing Tackle is Especially Wanted, for the Majority of Camps are Pitched Near Water — Some Culinary Articles are Also Needed—A Montreal Dealer's Method of Securing the Custom of Anglers.

A strange season this. So far there has been little really warm weather, yet despite this the call for sporting goods has been large. But the dog days are coming. They cannot be far away, and with them will come a new demand —a demand for camping goods, and for such supplies as are wanted at picnics. With the hot weather will come the longing to eat and sleep out of doors. Warm weather fills the canoeist with a desire to sleep upon the banks, and the fisherman plans a week-end trip. Boys arrange to go for a week's camping expedition, and older people even think that they might well spend a fortnight under canvas. Hot weather stirs the blood.

Of course, the first requisite of camping is a tent. These are carried by many hardwaremen at this season, though some there are who have little to do with such supplies. They count more upon furnishing things for the tent than upon supplying the tent itself. But here, too, there are great possibilities. A small camp stove will be needed. Perhaps a small oil stove will do. Perhaps the party may want a gasoline model. If the trip is of but short duration the plan may be to cook on an open fire. That means fun for all and success for some. It means also the need of such things as pots, and can openers. Can openers are among the leading requirements of a camping trip.

Camp stools, too, are needed—a line which many hardwaremen are handling profitably; while lanterns and flashlights are a part of the necessary kit.

Then there are a few tools. Were you ever in a camp where there was no hatchet? The writer has been. It was a terrible experience. The first night the centre pole of the tent slipped from the imperfectly cut crutches on the end of the supporting poles. The tent pegs were continually slipping, not having been properly driven into the earth. Firewood could not be cut. The principal amusement in that camp was reviling the man who had been charged with securing a hatchet and who had failed.

In all parts of the country camping parties are starting out at this season. Some will stay in the open a few days, some a few weeks. But all will buy a good deal of hardware before they leave, and it might, therefore, be well worth while to arrange a display which would suggest the needful things. Perhaps a miniature tent might be erected, with a camp fire laid before it. A canoe might be shown near by, and certainly there should be fishing poles. Where camping out is most popular is by the side of some lake or stream. Almost without exception the occupants hope to do a good deal of fishing. They go well supplied with the requirements. Fishing tackle is one of the leading lines to sell those starting on an outing. They will want paddles, and a baseball, and a baseball bat. They will want some culinary equipment, but they are certain to need a fishing rod, or a line, or some new hooks.

Leduc & Asselin, of Notre Dame Street, Montreal, have adopted a somewhat novel method of securing the fishermen's patronage. And they are succeeding. "We have sold a great deal of tackle," remarked Mr. Asselin. "As you know, we have not been in this stand very long, but I believe we are going to make it a rendezvous for fishermen."

Listen to the story of this firm's campaign. They sell bait. To catch the fishermen's trade they have been selling bait. In one of the store's large windows is a huge aquarium, and in this swim about countless little minnows. None who pass can miss these. To the fisherman who uses that kind of bait they prove exceedingly attractive. Perhaps he does not want any then, but when he does he is going there to buy.

"No," remarked Mr. Asselin, in speaking about the sale of the bait, "I do not believe we make much from handling the minnows. That is, I do not think the direct profit is great. We pay 1¼ cents for minnow. We sell them at 25 cents a dozen. That leaves us a few cents gross profit, but hardly enough to repay us for the trouble. But we benefit in other ways. To begin with, we sell a great number of bait-pails. Some of those who come for the minnows bring pails, but the majority expect to buy them here. You see, we are near the station. Many, when they decide to go fishing, get their whole equipment here and walk right over to the train.

"We sell a great number of rods and lines. I feel sure that we get a great part of this trade by reason of the bait."

A Novel Method.

There are many methods of making a sporting department attractive, but undoubtedly, Mr. Asselin has hit upon a novel scheme. He is the only dealer in the district who handles bait. No wonder many go there to make their purchases of tackle.

Fishing tackle appeals to the picnickers as well as to those who intend being some time away from the city. But there are a great variety of goods which interest the picnickers. Balls and bats, of course, are in regular demand. Gloves, too, may be wanted, but particularly is the call for such goods as help with the meal. The meal is the great thing at a picnic.

Thermos bottles sell particularly well at this season. Be it ice cold lemonade or hot tea, the Thermos bottle is the thing for it. But a Thermos bottle is incomplete without cups. Cups may be carried, but they are hard to bring back, therefore, the chance to sell a folding cup is excellent. Nor are the cheap lines the only ones which will find purchasers. More and more people are coming to realize that they should have a folding cup. Health demands this.

Value of Contrast in Advertisements

Headlines Should be Made to "Stand Out" from the General Matter — Type Used Should Not be Uniformly Large—Contrast and Space are Lost in That Way—Criticism of an Advertisement...

Ever stop to figure out the importance of contrast?

It has been said that comparisons are odious; but they are frequently very useful and valuable. Things are appraised almost invariably by means of contrast. For instance, a public man is judged by the way he stands out from the mob. An institution is compared with others of the same kind. We say "It is the greatest school in the country." An up-to-date and well-stocked hardware store is benefited by the opposition of the dingy, old-fashioned, little shop across the street. People realize that the big store is a high class establishment when they contrast it with the opposition.

Contrast figures largely in matters of detail. A well-arranged store is a study in contrasts. The window dresser seeks a light background for dark articles in order to make them "stand out." And the advertising writer strives to make his matter as attractive as possible by somewhat similar means—he aims at contrasts.

Consider the accompanying advertisement—a highly creditable one in practically all respects. It is forcefully written and well illustrated. The layout, generally speaking, is good. The articles shown are seasonable. One fault appears on the surface, however. The type used throughout is too large and the page has, as a result, a somewhat jumbled appearance. The lines which should stand out most prominently do not catch the eye first glance, on account of there being "too much opposition." In other words, it lacks contrast.

This criticism does not apply to all sections of the advertisement. The top corners devoted to paints and tools show appreciation of the value of contrast. The headlines stand out from the matter following with a distinctiveness which challenges your attention. In the sections below, devoted to builders' hardware and sporting goods, however, all the type is of large size and none of the statements gain prominence.

The ad.writer loses in another respect. He loses space. Under the heading "Neverleak and Paroid roofing," there is room for a good forceful talk on roofing, if smaller type were used. It might have been said for instance:

"These roofings will last a lifetime. They are durable, watertight, and easy to lay. For quality and price combined, they cannot be excelled.

"We have sold **FIVE THOUSAND SQUARE** of these roofings since the big fire. This fact should speak for itself. Ask us for prices and samples."

As the ad stands, the heading on roofing is set in type which is not very much larger than the lines immediately above and the lines following.

Full page advertisement of Frank A. Child, Cochrane.

The Use of Panels.

The advertisement in question would gain in appearance also if panels had been used. A panel around that devoted to tools would serve to draw the matter together and keep each department more distinct. The same effect could be obtained by putting panels around the fishing tackle sections in the sporting goods department.

Force would be lent by a stong headline across the top, instead of giving so much prominence to the firm name which is also featured at the bottom. For instance:—

THE GOODS YOU NEED NOW
are found at
CHILD'S HARDWARE.
The store that will serve you best.
Cochrane. Matheson.

In other respects this advertisement is deserving of commendation. Mr. Child is a believer in the use of newspaper space, apparently, for he uses a full-page ad. in this instance. That he will get results is a foregone conclusion for the articles advertised are all "big sellers" at the present time. This publicity effort is timely and forceful. It is indeed "good stuff."

Don't Overcrowd.

To revert back to the question of the utilization of space, it should be pointed out that while it is always advisable to get in as much copy as the space will allow, it is extremely bad policy to overcrowd. An ad. which has too much material crowded into it, is infinitely worse than one which has too little. Of the two evils choose the latter.

HARVEST GOODS

This is the season when every farmer is preparing for the Harvest. In making this preparation see that you have the best tools to work with. You will find nothing but the best here as well as a good Assortment to choose from. We would be pleased to supply you with any of the following articles which are necessary for the Harvest Field.

Showing the value of contrast in type.

HAY WIRE ADVANCED.

Montreal.—At a meeting of those interested held in Montreal a few days ago, it was determined to advance the price of hay wire five per cent. Cost of production has made this seem necessary.

APPOINTED AGENTS.

The Smith Hardware Co., of Montreal, have just been appointed Canadian agents for the Racine Metal Stamping Co., of Racine, Wis., makers of hinges, bumpers, window locks and many other lines.

PERMISSION FOR FACTORY.

Cobalt, Ont.—At yesterday's meeting of the Coleman township council that body gave permission to the Dominion Safety Explosives company to erect a manufacturing establishment on lot 10, concession 6, in the township. This point is about three miles west of the town of Cobalt between Mud and Sharpe Lakes. The usual government regulations respecting distances from roadways or other private buildings, will be in force in the locating of this establishment.

Complete Course of Sheet Metal Work

By L. W. KOSER

Prob. 19 shows how to develop the pattern for the spout.

First draw a vertical line representing the side of the can.

Then draw the cone PXX, representing the spout. (See Figs. 2 and 5) A, and joining the side of the can at C and D.

The first thing we want to do is to develop the mitre line CED.

Directly below the can and in line with it draw the circle Fig. 3, the same diameter as the can. From the centre O draw the horizontal line OV.

Drop a vertical as K from the point P for Fig. 2, cutting the line OV at V.

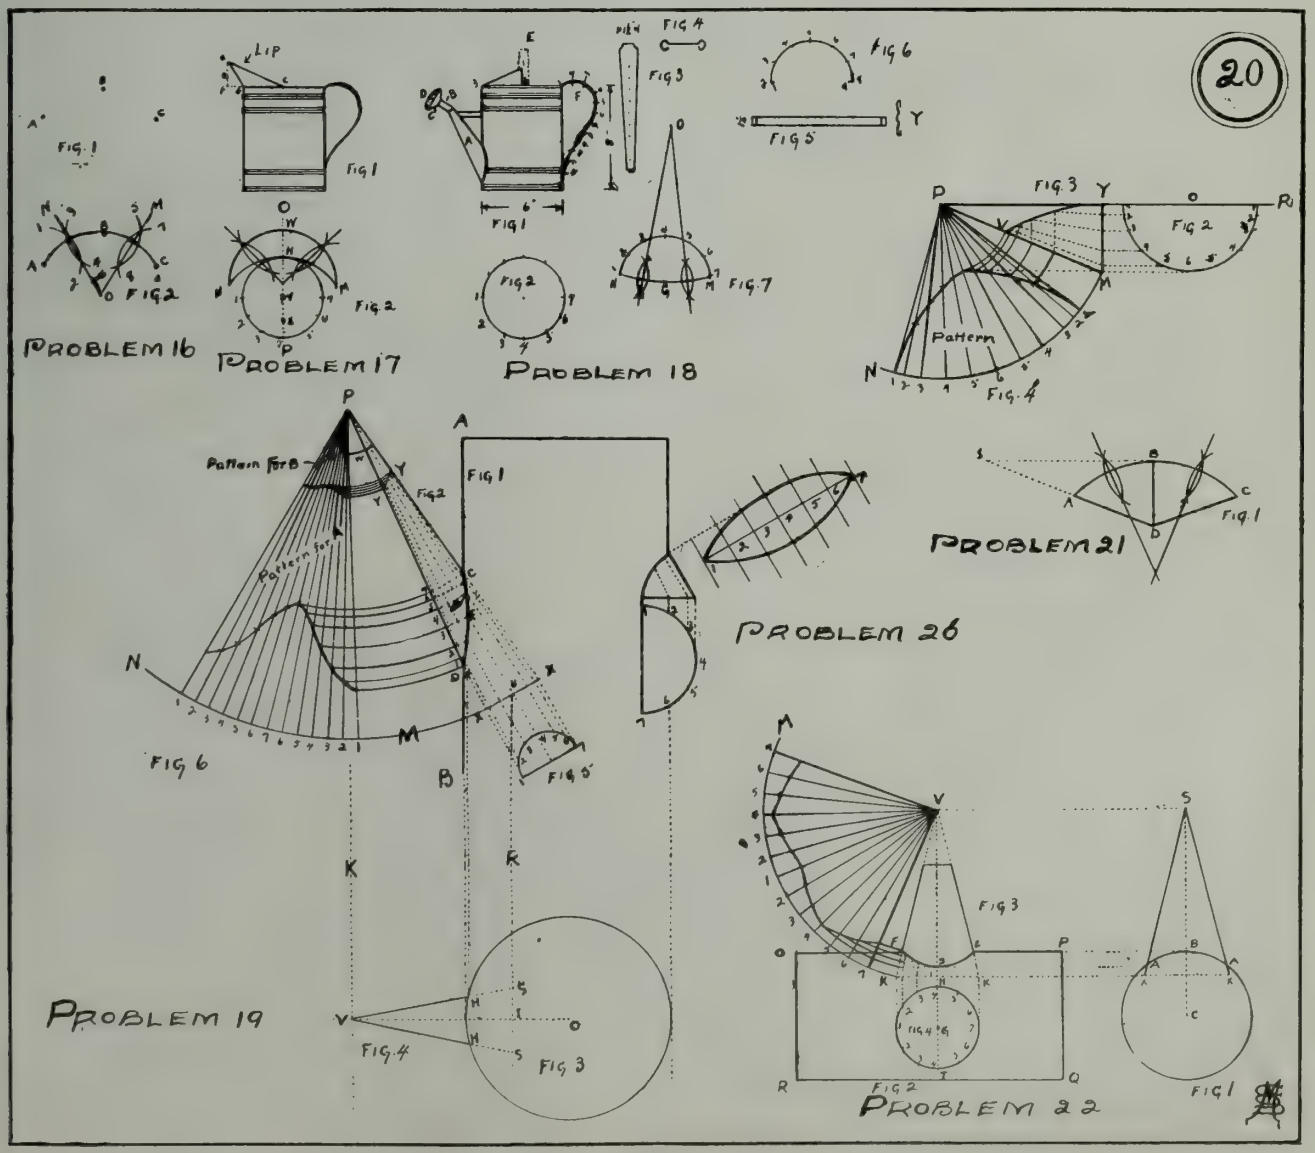
Drop a vertical line as R from the centre of the base XX as U, and cut through the line OV.

Lay out the base line XUX on this line as shown by the points SIS. Fig. 2.

Draw a line from the points SS into the point V, thus getting the points where the sides of the cone or spout meet the sides of the can, as HH.

Project a vertical line from H until it meets the centre line PU as at E. Then draw the line CED, which will be the mitre line.

The pattern for the bottom of the cone or spout is developed the same as explained for Prob. 6, plate 18. But in order to impress it more fully on the mind of the student, we will again explain it as it is here illustrated.



Drop the centre line PU of the cone any distance below the base line XX. With the point of the compass on this line and with a radius equal to XU (or ½ the diameter of the base of the cone) describe the semi-circle Fig. 5 and divide it off into equal spaces and number each.

Project lines parallel to the centre line up to the base line XX, and then carry them toward the point P, and where they meet the mitre line CED and the top line YY, carry them at right angles to the centre line PU out to the side line PD.

Then with the point of the compass at P and the lead at the base of the cone as X, describe an arc NM, and on this lay out the stretchout of the base of the cone as Fig. 5.

Bring the lead against each of the points on the line PD, and swing an arc cutting the corresponding line.

The part C of the watering can is just a plain frustrum of a cone, and the part D is hollowed out and punched. Zinc roses, however, can be purchased from any hollowware manufacturing company.

Progressive Hardware Retailing

A Novel Method of Securing Wedding Present Trade—Big Sales of Steel Granaries—Pioneer B. C. Hardwareman is Retiring—Handling the Trade in Electrical Goods.

KEPT LIST OF PRESENTS.

An interesting and progressive idea for securing wedding present trade is followed by a dealer in a comparatively small town. He watches the papers very closely for announcements regarding weddings, and, when customers come into his store to buy kitchen utensils, he asks whether they are to be given as a wedding or shower present, stating that if such is the case, the customer may be interested in knowing that he is keeping a list of articles bought as presents in order that these presents may not be duplicated by friends of the prospective bride.

This has had the result of getting him practically all the trade in those lines. The news gets around and people go there to make their purchases because they know, by so doing, they avoid duplication.

SOLD STEEL GRANARIES.

Govan, Sask.—Dickey & Augur, hardware dealers, are featuring steel granaries in their advertising. They state:

"We built and sold sixty-five of these Granaries last year, and had to refuse orders for thirty at the least. So if you want Steel Granaries this year shoot in your orders now so that we will not have to disappoint you again."

WARM WEATHER DEMANDS.

St. John, N.B.—It is noticeable with the advent of warmer weather that the policy of the leading firms has been a concentration of efforts to feature the sale of such articles as tend to comfort and satisfaction against the heat, and the windows of the stores of hardware merchants with modern ideas in Moncton, Chatham, Fredericton, and St. John may be seen in a display of refrigerators, thermos bottles, easy chairs, hammocks, screens, ice-cream freezers and a wide variety of other articles which should command a ready sale. For instance at least three firms have been dwelling on the importance of every household being equipped with a refrigerator, large or small, referring to the usefulness of the article, its practicability, expense-saving, and aid to sanitation. As James S. Neil & Sons, of Fredericton, say in their ad. "it circulates pure, dry air, preserves all classes of foods perfectly, and with economical consumption of ice."

The present month has proved a record breaker with every store in the city which carries a line of specialties and novelties such as appeal to those who wish to remember their friends approaching the marriage altar, and while no extraordinary efforts have been made to attract the trade the fact that they have in store an effective assortment of wedding gifts has been made known to the public. The firms of W. H. Thorne & Co., and T. McAvity & Sons since the middle of last month, May, have been showing at frequent intervals in their most prominent windows, lines of silverware, souvenir novelties and household utensils, which would make suitable wedding presents, and their far-sightedness was gratified this month when the season of "happy events" began, for the run on this class of goods was most promising and encouraging.

ELECTRICAL GOODS TRADE.

Maple Creek, Sask.—Under the heading, "Buy your electrical goods from us," the Maple Creek Hardware Co., are advertising their electrical stock effectively. They state: "We are the 'live wire' in the electrical goods line. Just come and see the many appliances we have for you. Our hardware store sells goods cheaper than an electrical store."

PIONEER RETIRING.

Vancouver, B.C.—Z. Franks, 44 Water street, is retiring from the hardware business after 25 years. He announces the fact that he is now planning to hold his "first and last sale." In order to clear out his stock, he is offering considerable reductions in prices. This fact is being advertised largely.

Mr. Franks is one of the pioneer merchants of the city.

A TOOL WINDOW.

Cobalt.—One of the best window displays seen here for some time is that of the Geo. Taylor Hardware Co. The north window contains an assortment of mechanics' tools, which is complete in every possible detail. Tools are shown for every trade and there is a good assortment of most tools. It has attracted considerable atention.

PUSHING STOVES.

New Liskeard.—In the latest issue of "Taylor's News"—the form in which the advertisements of the Geo. Taylor Hardware Co. are published—the following reference is found:—

"Wedding presents are more in demand in the month of June than other months because June is the bridal month. To add to this 1912 is a leap year which means just twice as many weddings and we want all intending purchasers of gifts to see our stock before they buy."

"We were all there once ourselves and are making special concessions in the way of discounts to all newly married couples on house furnishings. A stove is an absolute necessity to the newly wed if perfect harmony is wished and a range will often create harmony to the older wed where it has not previously existed."

LETTER BOX—Continued

Water Filters.

Reader, Regina, Sask.—"What firm manufacture a line of water filters which fasten to a faucet?"

S. Sternau & Co., Brooklyn, N. Y.; The Champion Safety Lock Co., Geneva, Ohio; Seed Filter Manufacturing Co., New York; Graham & Berwin, New York.—Ed.

Viking Boilers.

Jordan, Steeves & Son, Hillsboro, N. B.—"Will you kindly give me name of firm manufacturing Viking hot water boilers?"

Warden, King & Co., Montreal, Que.—Ed.

On Western Trip.

R. H. Osborne, of the Northern Aluminum Co., Toronto, is on a two months' trip to the coast. Mr. Osborne will call at all the principle places through the West.

A Big Demand for Game Traps Certain

The Demand Follows the Price of Furs—The Present Scarcity in Furs Has Boosted Prices to a High Level — The Trappers Will be Busy This Fall.

There is every indication that the demand for game traps this fall will be extremely brisk. Statistics covering many years show that there is a definite and tangible relation between the price of furs in the spring of the year and the sale of traps during the following fall. For instance, in the spring of 1910 the price paid for muskrat, skunk, etc., was the highest on record. The sale of traps that fall reached unprecedented proportions. A reaction came in the fur market in the spring of 1911 and prices for the leading furs went down to one-third of their former price. This was followed by a small sale of traps in the fall of 1911.

The result of the small sale was a correspondingly small catch of animals and as a natural consequence the price of all furs began to go up again rapidly. During the past winter, there has been a steady upward trend. At the March London sales, many of the leading furs were marketed at a price close to the phenomenal figures of 1910. At the present moment there is a distinct shortage, which some trade papers refer to as almost a "fur famine."

Under the circumstances, it is reasonably assured that there will be an active fall in the catching of furs. The scarcity will keep prices up and this will serve as an impetus to trappers to make a heavy catch. It is equally certain, therefore, that the demand for traps will be heavy.

If the dealer bases his purchase of traps this year on his sales of 1911, he will find that he has underestimated the demand and will "run short" in the height of the season.

As an evidence of the activity which will prevail, down in Essex County, Ont., the farmers are buying up swamp land, fencing it in, and trapping the muskrats, which live among the reeds and flags. Many of them realize more from these swamps than from all the good agricultural land on their premises. Muskrat pelts which a few years ago sold for 15 cents each, now bring as high as 60 cents, and the price is steadily increasing.

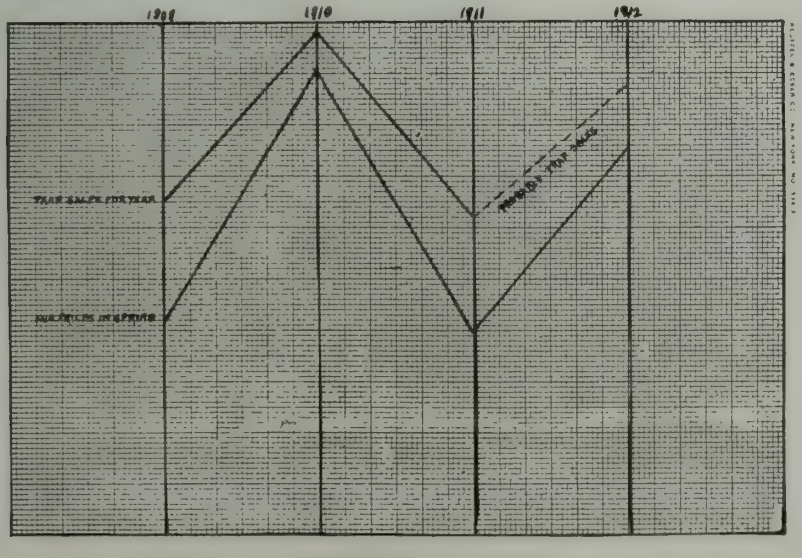


Chart showing how closely the demand for traps follows the price of furs.

Current News of Hardware Trade

Offices Moved.

Montreal.—The Canada Cement Co. have moved from La Banque Nationale Building, and have opened offices on the fifth floor of the new Herald Building, Craig street.

Extension to Store.

Annapolis, N.S.—K. Freeman is making more improvements in his hardware store. The store next door has been acquired and will be used as an annex.

Hardwaremen Lost.

Collingwood.—The hardwaremen were beaten in the city baseball league by the Northern Navigation by the score of 11 to 10.

W. H. Evans Injured.

Montreal. Wm. H. Evans, well known to those interested in the manufacture of paint, met with a serious accident last week. He was crossing St. Catharine street when he was struck by a car. His thigh was fractured, and it feared there are some internal injuries.

Staff Changes.

Frank, B.C.—M. Lowe, of Blairmore, has been placed in charge of the furniture department of the Crow's Nest Hardware store.

J. Smith has accepted a position with John Harvie & Co., hardware dealers, Treburne, Man.

Chas. Byford, formerly with G. A. Binns, of Newmarket, has accepted a position as head clerk with the Bond Hardware Co., Guelph.

Personal Notes.

Port Arthur. — G. A. Stethem, hardwareman, of Fort Frances, formerly of this place, is in the Twin Cities, on a visit.

J. C. Newman, manager of McClary's Montreal branch, underwent an operation this week. The treatment was entirely successful.

J. T. Emerson and J. L. Wells, hardwaremen, of Port Arthur, have been in Fort Frances attending the annual meeting of the Wells Hardware Co.

New Retail Store.

Gull Lake, Sask.—C. Miller has started in the tinsmithing business line.

Herbert, Sask.—Janzen & Son, have started in the tinsmithing business.

Maple Creek, Sask. — The Burchill Hardware Co., have started a store here.

Expense, Sask. — Rothstein Bros., hardware merchants of Kelliher, are opening here in the hardware and furniture business.

Business Changes.

Milverton, Ont.—J. Rothaermel & Son, hardware dealers, have sold out.

Gull Lake, Sask.—C. Worrell, tinsmith, has discontinued business.

Moose Jaw, Sask.—H. E. Montgomery, tinsmith, is branching into the plumbing lines.

Calgary, Alta.—Powell & Rust, sheet metal contractors, have dissolved partnership.

Havelock, Ont.—Phillips Bros., hardware dealers, have dissolved partnership.

Tenlon, Man.—F. C. Green, dealer in hardware, has been succeeded by James Grahame.

Fort Frances.—R. J. Holmes & Son, of Devlin, have purchased the general store business of D. Matheson & Sons of the same place, and will open up with a full line of hardware in the new stand. The present stock of groceries, dry goods, etc., will be moved to the store at present occupied by Holmes & Son.

Weekly Market Report --- Metals

METAL NOTES.

Lead is reported to be very scarce.

Advances have been recorded in lead pipe, copper sheets and bars, brass sheets, rods and tubing.

There is an active tone noted in all sections.

MONTREAL.

Montreal, June 13.—Several changes in price, which have been expected and predicted, were effected this week. A new level was fixed for brass sheets, and rods, and tubing; while copper sheets and bars were also raised two cents a pound. This rise was to be expected, that it was not made a little sooner, indeed, is hard to understand, but apparently the handlers wished to keep prices at the old figures as long as possible.

Soil pipe, too, has been advanced, while lead pipe is now quoted at a higher figure. There are several other changes in the prices of products, all being the natural result of the high figures asked for the raw material.

No Trouble to Sell.

The market at the present time is exceedingly strong. "There is no trick to sell the metal," remarked the head of one concern. "The thing is to get it." Indeed, this is the problem, for at the present time considerable difficulty is being experienced in getting supplies of some materials.

Notably there is a scarcity of lead, but tin, too, is none too plentiful. The dockers' strike in England has had some effect upon the shipping of lead, and now there is a possibility of the trouble spreading, it is possible that shipments of tin, too, may be interfered with. So far, however, this has not occurred.

Copper remains high; but for that matter the whole tone of the market is toward high prices. Tin has been advancing—which gives general satisfaction here. Lead is exceedingly high, and copper maintains its high level.

Scarcity of Lead.

Lead.—Practically no Canadian lead is on the market. English lead, upon which the handlers have been dependent, is exceedingly hard to secure. If anything, should seriously interfere with shipments the situation here would be grave, indeed. It is already hard for the handlers to scrape a ton together.

Spelter.—Though the supply is sufficient a good price is being asked for this metal.

Tin.—After the recent decline the stiffer tone of the market is favorably regarded. Before it was impossible to tell what would happen next. The future is none too certain now, but it appears that the price will remain fairly steady. Locally the supply is only fair. Handlers have been doing a good business, and while they have enough on hand for the present, interference with shipments would be serious. The general feeling, however, is that the dockers' strike will not spread sufficiently to cause any great trouble.

Copper.—Products,as has been said, have been advanced this week. The rise of the metal has made this necessary. It seems, too, that the high water mark has not yet been reached. Copper is now remaining steady in price on the primary market, but there seems no reason to suppose that it has soared as high as it is likely to go. Supplies in Montreal are fair, but the demand is large—almost too large, it would seem, in proportion to the supply.

Iron.—The supply here is fairly satisfactory. But the metal is costly and there is small wonder that those using it to make their finished product have felt it necessary to fix a new price level.

TORONTO.

Toronto, June 13.—The gradual stiffening of prices in practically all metals culminated this week in a number of advances. These changes have been anticipated for some time, so they have not affected the market to any extent.

Business in metal lines is extremely brisk. There is a heavy demand all around. In view of the fact that in most lines stocks are pretty light, it seems assured that the future will see a continuation of activity and high prices.

"I cannot see that there is any prospect of lower prices for some time, at least," said one man. "Conditions at present absolutely prohibit this. What is more, there is every reason to suppose the conditions will not change."

Tin. — The price remains the same. There is a heavy demand and it is said that stocks are none too heavy at present. The demand has grown much more rapidly than the supply. Locally it is anticipated that the present high prices will prove practically permanent.

Copper.—The price of copper sheets and bars has been advanced 2cents a lb. This change has been anticipated for some time, as a result of the high price of copper, and it did not, therefore, cause any surprise.

Brass sheets, rods and tubings have also advanced in price.

"Boom" is the only word which describes the present situation in copper. The price is now high, but predictions are freely made that it will go above $20 before the climax of the upward trend is reached. The consumption has increased enormously with the result that the stocks on the primary markets have been depleted. The consumption has gone ahead of production rapidly.

A Scarcity of Lead.

Lead.—The market is short on lead. It is stated that Canadian lead is hard to obtain, almost impossible, in fact. Stocks have become low again, and, as the demand remains heavy, it is altogether likely that the shortage will be felt for some time.

Reports from outside points are to the effect that an advance is anticipated in lead.

Lead pipe has advanced this week, as noted elsewhere.

Spelter.—There are no developments to report in spelter. The price is firm, and an advance in the near future would not cause any surprise.

WINNIPEG.

Winnipeg, June 10.—A feature of the week has been an advance of 10 cents per box in Canada plate, both half polished and full polish. Other lines are steady.

There is a good seasonable demand for all lines of heavy hardware, and fall bookings are reported to be encouraging. Galvanized iron sheeting and guttering is moving freely as the building season progresses, and the demand for metallic ceiling shows that this form of interior finish is growing in popularity, especially in building for commercial purposes.

The Made-in-Canada train and its various exhibits attracted a good deal of attention here, and has been very successful in advertising certain lines of eastern manufacturers to western consumers.

TO MAKE PUMPS.

New Hamburg.—Another new industry is being established here, besides the new industry for manufacturing electrical supplies here, which is to be established by New York State capitalists, and for which enterprise a by-law was carried on April 29 last, agreeing to give a loan of $20,000 after a $40,000 plant had been fully equipped. The new factory will manufacture fresh water pumps.

Weekly Market Report --- Hardware

GOODS ADVANCE.

The hardware market has seen a number of important changes, all in an upward direction. Bar iron and lead pipe are quoted higher. Brass goods have advanced, in some cases as much as 15 and 20 per cent. Copper and nickel plated ware has also been advanced. The scarcity and high price of the raw material is the primary reason for the higher prices.

MONTREAL.

Montreal, June 13. — Though the weather has not been what might be expected, it has yet proved satisfactory to the great majority of hardware men. The rain has brought along the grass and the gardens. It has, therefore, created a demand for lawn mowers and garden tools which is almost unprecedented. If warm weather comes now, and causes a need to be felt for the hot weather lines, all will be as it should be.

Indeed, it seems that this will be the case. The thermometer is more steadily keeping a high level, and the call for garden furniture, for screen doors and such lines is being felt. Evidently a good number of these goods have been sold already, for supplementary orders are being received.

Plate Ware Still Unsettled.

Price changes have been few, although it is expected by some that the reduction in the duty on cement may bring about a lower price for that commodity. Verification of this belief can not be secured. The question has not been definitely taken up as yet by the cement companies, and a decision upon the point will not be reached for a few days. The prices remain at $1.35 in Montreal, and $1.50 in Toronto.

Plate ware, which has risen materially in price since the new year, is still unsettled. The belief is that another advance will be struck before long. The great demand for the goods, and the high price of silver makes this seem likely.

Household Goods. — Cutlery, which was advanced recently has now seemingly struck its level. The demand has not fallen off at all on account of the prices. For enamel ware, and aluminum ware the call has been heavy. It is a time of year when such goods are in especial demand.

Builders' Hardware.— With copper still advancing it would appear a higher figure must be struck for these lines, but competition is preventing this. The demand for all classes of this line of goods is great, but that there will be a new price struck seems unlikely — for the time at least. There does not seem to be any thing but competition to explain the continuance of the old price in face of the new conditions.

Heavy Hardware.—Here one advance has been made, though one of little importance. Bar iron has been raised 5c a cwt. That this should be so is not at all surprising, for iron of all kinds is higher now than it has been for a considerable time.

Iron Pipe, too, is likely to advance shortly. This, of course, will be simply because of the higher cost of the raw material.

Seasonable Goods.—As has been said the rain has helped the sale of lawn mowers, clippers, and garden tools. But it has had a deterrent effect upon sales in other lines—lawn hose, for example move poorly just now.

TORONTO.

Toronto, June 13.—Business is brisker than ever. The weather has not been as favorable as had been hoped for, but in some respects it has helped to increase the trade wonderfully. The rain has caused the grass to grow and the result has been a steady and heavy demand for lawn mowers, shears, etc.

Warm weather goods are also starting to move, although there has not been a great deal of really warm weather yet. Altogether the jobbers have not had any reason to complain; except, perhaps, on the score of transportation, and that is a perpetual cause for dissatisfaction.

A number of price changes have been made since last writing—all in an upward direction.

Seasonable Goods. — The demand remains of a constant variety. Dealers apparently are finding a ready sale for orders, mostly of the storing order, continue to pour in. Garden tools, awnings, window screens, screen doors, garden swings, etc., are among the lines which are moving most rapidly.

Household Goods. — In this department a number of advances have been made. All brass goods, including such articles as candlesticks, kettles, fern pots, have been materially advanced in price. In some lines the new scale shows an advance of as much as 15 and 20 per cent. As the hardware trade is becoming more largely interested in this line all the time, the change in prices will be of considerable interest.

Copper and nickel plated goods, such as boilers and kettles, have been advanced also. Discounts varied from 42 to 47 per cent., but everything has now been put on the one discount of 40 and 5. This advance is due to the rapidly increasing cost of copper.

Builders' Hardware.—The demand is growing steadily. Every promise is held out that the fall trade will break all records in point of size.

The advance in brass goods has revived the rumor that the different lines of builders' hardware into the composition of which brass enters will be put up. There is no confirmation of this report, however.

Heavy Hardware.—An advance is noted in the price of lead pipe. The discount is placed at 15 per cent., and the list is as follows: Lead pipe, 7½ cents a pound; composition and waste pipe, 9 cents per pound.

WINNIPEG.

Winnipeg, June 10.—For the first four months of the year, Winnipeg holds the second place among the cities of Canada in the matter of volume of building permits. The increase is 32.7 per cent. over last year for the time. The estimated total for the year is twenty million dollars.

Under the circumstances it is easy to see that in building hardware there continues to be a brisk movement, and an exceptionally satisfactory outlook.

The demand from country points for hardware keeps up well, although it is hardly as keen as last week. Collections for May were decidedly better than in April, bank clearings last week running to the huge total of $32,634,278, as compared with $18,600,902 for the corresponding week last year.

There is a very fair demand yet for summer sporting goods and camping outfits, but the main trade in these lines is near over for the season. Retailers are, however, stocking up with sporting goods for fall trade, and salesmen are busy already in booking orders for various fall lines.

The crop prospect is regarded as favorable, and the strength in the wheat situation is encouraging as to prices for the coming crop. There is still considerable of last year's crop on hand, which is selling at good prices.

Reports of damage to growing grain in the Red River Valley from excess of moisture do not apply to the country north of the U. S. boundary.

Effect of Tariff Reduction on Cement

Will Canadian Cement Companies be Able to Meet the Competitive Prices of United States Producers?—The Reduction Will Result in Lower Prices, Though No Change Has Yet Been Made.

The reduction of the duty on cement has, literally speaking, stirred up a hornet's nest. The action of the Government has been very warmly debated, and many statements are being made as to the result, some going as far as to state that the measure spells ruin for the cement industry in Canada.

The action was taken to relieve the situation in the west, where there was an undoubted shortage of cement. It may be that the shortage would have proven temporary. The west is developing so rapidly, however, that the people there could not brook delay, and pressure was brought to bear on the Government.

The claim is advanced by the cement companies that the shortage was due to the slowness of the railways in making shipments. They claim that they have the facilities to meet the demand without raising the percentage of importation to any appreciable extent, but that the railroads have not been able to supply them with cars to ship to the west promptly. Under the circumstances, they complain that they have been made the scapegoat and that the loss will fall on them when the transportation companies are in reality to blame.

Effect of the Reduction.

It goes without saying that the result of the reduction will be lower prices of cement in this country. At time of writing, no change had been made, but Hardware and Metal was assured that the price would undoubtedly be brought down. What reduction the Canadian producers could afford to make had not been decided. The reduced prices will apply in practically all parts.

The facts are there. The production of cement in the United States is so immense that the price is lower than that asked in Canada. At the present time, the price varies from 50 cents to 70 cents. In 1911 it ranged from 85 to 92 cents, and for several years before that it ran from 90 to 95 cents. It will thus be seen that, with the duty cut in half until November, the American cement companies can afford to sell cement in this country at a low figure, and there will be heavy shipments into this country.

The price at which American cement will be sold depends entirely upon the distance of shipment. Where plants are situated close to the border, the cement will be shipped across the border at a lower figure than will be asked in other sections where the distance is greater.

> The duty on cement coming into Canada has been cut in two. The reduction will amount to 26 cents per barrel, 23 under the intermediate and 17 under the preferential.
>
> The reasons for the change are set forth by the Minister of Finance as follows:
>
> "From information I have obtained I am convinced that a serious shortage in cement exists in various sections of the Dominion, due both to an unprecedented demand for the commodity, and to the difficulty experienced by Eastern producers in promptly making shipments by rail and water.

"Will there be much United States cement sold in Ontario and the eastern provinces?" was the question propounded by a representative of Hardware and Metal to an official of one of the large cement companies.

"It depends on whether the Canadian companies will be able to meet the price," was the reply.

"Do you anticipate that the price of imported cement will be met?"

"We cannot say. There will be a reduction, but what it will be it is impossible as yet to say."

The opinion was expressed by some that the eastern field would not be invaded to any extent, but that the west would see heavy importations.

Watch the Quality.

Dealers are advised to keep a close watch in the matter of quality and, whenever they purchase imported cement, to make sure that it is the output of a reliable firm.

The consumption of cement has risen very rapidly in Canada. In 1907 it was 3,100,000 barrels; in 1908, 3,100,000 barrels; in 1909, 4,200,000; in 1910, 5,100,000, and in 1911, 6,300,000. Nearly all the cement consumed in Canada is locally manufactured, the Canadian production being, in 1907, 2,400,000 barrels, or 78 per cent. of the consumption; in 1908, 2,600,000 barrels, or 85 per cent.; in 1909, 4,000,000 barrels, or 97 per cent.; in 1910, 4,750,000 barrels, or 93 per cent., and in 1911, 5,600,000 barrels, or 89.5 per cent. The importations in 1911 were only 662,000 barrels, or about 10 per cent. Of this, 441,000 barrels came from the United States, and 190,000 from Great Britain; the remaining 30,000 barrels coming from sources as far apart as Belgium and Hong Kong. Canadian production thus has kept well up to Canadian consumption.

Stoves, Furnaces and Accessories

Preparing for the Fall Stove Campaign

Dealers Should Utilize Slack Moments During the Warm Summer Months to the Preparing of Advertising Copy and the Drawing Up of Prospect Lists— Educational Work Should be Started Early.

There are always certain days during the summer when there is little to do around the store. Few customers drop in during the warm afternoons and about all the staff have to do is to keep cool.

One trait of the successful man is that he is never idle. He finds something to occupy every spare moment. Still there are times during the hot, wilting days of July and August when even the most intensely ambitious of men prefer to sit around in their shirt sleeves rather than indulge in manual exercise. The hardwareman may be excused if he does not occupy his spare moments in mid-summer lugging around packing cases and rearranging his stock. Still there are things he can find to do, if he casts around to do them.

There is a great deal of preliminary work to be done in connection with the fall stove campaign. There is the advertising to be arranged, the lists of "prospects" to be drawn up, the orders to be placed. All this requires considerable thought and attention.

Many dealers leave everything to the last moment. They doze through the slack spells during the summer months and do not waken up until the stove season is upon them. Then there is a mad rush to catch up but in nine cases out of ten, the dealer does not find the time to conduct his stove campaign on the lines he had intended. He lets things slide and just takes the trade as it comes.

Much of the work could be done well in advance. The advertising matter could be prepared. It takes considerable thought to write a good ad. and thought means time. If this is left until the last moment the time will not be available and the advertising matter will be "dashed off" just as the opportunity arises.

The better method is to select some quiet July or August afternoon when there is little doing in the store and give a few hours careful study to the subject. Look over the literature supplied by the manufacturers and pick out the strongest facts that are to be found. With this material it should be possible to draft up forceful copy. Then take pencil and ruler and figure on lay-outs. Most retail advertisers pay little attention to the way that their matter is to be arranged. They leave that to the printer. It is better to plan a lay-out in advance, however, when time permits. By utilizing spare moments during the summer, all the necessary time can be obtained.

A Prospect List.

The "prospect list" is an adjunct to every successful stove campaign. The stove dealer can divide his public into two classes; those who are not in the market for stoves and are not likely to be under any circumstances and those who are good prospects. If he can find out those who belong to the latter class, he can concentrate on them instead of scattering his efforts.

Many dealers send out the literature supplied by manufacturers to people whom they think may be induced to buy. This is an excellent means of creating business but it is necessary to proceed with care. Some dealers send literature out promiscuously, not selecting the names on their lists with an eye to the probability of sales. The result is that a very large percentage of the matter is wasted, going into homes where a stove is not needed and probably may not be needed for years. Sending out printed matter becomes an expensive measure when the lists are not carefully supervised.

Sending Out Letters.

Other dealers send out personal letters. This is done, of course, only when the dealer has the names of a number of people who are almost certain to buy. He cannot very well address a letter to a prospective customer unless there is reasonable ground to suppose that the recipient will be interested.

The drawing up of a prospect list will provide occupation for a dull afternoon or two between now and fall.

Securing Prospects.

It is not necessary to enlarge on the usual methods of securing prospects. Every live store dealer has a list of people who are deemed to be likely customers. The names are picked up in the course of trade. People who have entered the store to purchase something else show an interest in the stove stock. They do not buy, perhaps they do not hold out any hope of making a purchase for some time. Nevertheless they have shown interest and the dealer puts them down on his list. They are prospects. Again an order for repairs may come from a certain family. The matter may entail a visit to the home and it is found that the stove is old and in poor repair. Here is a real live prospect. The name is entered.

It is not difficult to compile a lengthy list by such means. The dealer who has a good number of prospects will be justified in confining his mailing list very largely to these names. He will be working on fruitful soil.

Start in Early.

The sending of letters and literature to prospective customers is educational work. It may be some time before it accomplishes its purposes. Therefore, the dealer should begin his campaign some little time before the active buying season opens. Educational work done in August results in sales during September and October.

It will pay every dealer to devote a little time every now and then all through the summer to mapping out and starting his fall stove campaign.

A SYSTEM WHICH ENSURES A PROPER STOCK.

(Concluded from page 37)

kept under charge of a special man. The maximum and minimum amount wanted can be determined. It can be noted where the goods are to be secured; and while no one is in particular charge of watching the gradual reduction of this stock, the owner of the store will be in daily touch with the various lines, and may easily note how they are decreasing. He will note immediately when the low-water mark is reached, and then he can send off another order.

It is a fine system this, to guard against a shortage. It is a fine system to provide against the wrapping up of too much capital in a certain line. It is a system which makes money go far. It tends to bring a rapid turnover, and rapid turnovers are the life of a business.

Weekly Market Report---Stoves

THE STOVE SITUATION.

The stove market shows every sign of rapidly reviving activity. There is a good demand for immediate requirements, and fall booking is proceeding briskly. From some sections reports are heard that the cold weather conditions have hurt trade, but the check is of a temporary nature.

MONTREAL.

Montreal, June 13.—Manufacturers in this line are beginning to complain of the weather. Not only are travelers reporting that the continued low temperature is likely to harm the crops—and so to harm the fall ordering; but the immediate demand is being modified by reason of the unseasonable weather. This should be the season for coal oil stoves to move. And they have been moving too, but not nearly as rapidly as was expected. A week or two ago orders for this line were almost better than they are at present, while the demand should be growing greater day by day.

Unseasonable weather almost always does harm. People plan for the seasonable, and if unexpected weather comes it finds them unprepared.

Stove Pipes Advance.

There has been one change in prices struck within the past few days, stove pipes having been placed at $7.50 per 100 lengths for common, and $10 for polished, in place of $7 and $9—the prices which have prevailed.

It is the high price of galvanized iron which has made this advance necessary.

Summer Goods. —Ice cream freezers and refrigerators are moving fairly well, but hot weather is required to bring the heavy demand. Watering cans, which should be moving rapidly, are quieter than for a long time. What is the use of a watering can when rain is falling every day, or almost every day?

But the cool weather can not last much longer, and let the heat once be felt and all the delayed orders will come in with a rush. The retailer's supply will be depleted, and the manufacutrerers will be called upon to fill large sized supplementary orders.

Orders Being Delayed.

Gas Stoves.—The orders here have continue satisfactory. People who are contemplating the purchase of a gas stove, do not wait until they feel the need of it to keep down the heat. They are of the class who anticipate the need. Still even here a touch of real late spring weather will do good.

Coal oil and gasoline stoves, perhaps more than any other line are feeling the effects of the cool weather. People are not moving to the country because of the weather. They, therefore, are delaying their purchases. But there is no reason to believe that the sales will not come. Some, perhaps will argue that they have gone this long without the oil stoves, and therefore need not get them at all; but in the majority of cases the orders have been only delayed—not lost.

Record Breaker for Furnaces.

Ranges, Heaters and furnaces. — For cooking stoves a fair demand has already been felt, and it is likely that the next month or more will see still greater activity. In July the dealers begin to lay in their stock, though they do not expect to do a great deal of selling until fall is nearer at hand.

Heaters are showing little activity, but furnaces are in demand—thanks to the great amount of building which has been going on. Early as it is predictions are already being made that this will be a record-breaking year in the furnace business.

TORONTO.

Toronto, June 13.—The demand for stoves continues as satisfactory as at last writing. Not only are there plenty of orders for immediate delivery, but the travelers are booking up for the fall business.

"Our customers are showing a tendency to have their stoves shipped earlier," states one manufacturer. "We are booking a lot for July 1 delivery, and large numbers of orders call for August 1 shipment. Dealers seem to be alive to the possibilities of getting their stock in early this year."

Two reasons are advanced why early shipments will benefit the retailer. It is an assured fact that the demand for stoves this fall will be heavy—heavier than ever before. Even if no actual shortage occurs, the manufacturers will be rushed to fill orders and delays will occur. Therefore, the dealer who gets his goods shipped before the rush escapes delays in shipment with everything that entails. The second reason is that the freight situation is not showing any signs of improving. It is not improbable that shipments will go through more promptly now than when the rush starts in the fall.

Gas Stoves. — The demand for gas stoves is not showing any signs of abating. There is a heavy call. Orders from Toronto dealers are particularly large, this being due to some extent to the rapid development of the apartment house idea. There has been as well a surprisingly good demand from smaller places.

Oil Stoves.—The oil stove trade is not falling off, although the orders received are almost entirely of the sorting orders. Dealers are apparently doing a brisk trade for the orders being sent in are good sized.

Ranges.—The travelers are booking up well in advance on ranges, but many orders for immediate wants are being placed. One manufacturer reports having received an order from one dealer for twelve ranges this week, the instructions being for immediate shipment. It is quite apparent that some dealers, at least, can sell coal stoves during the summer time.

Heaters.—Trade is dull at present time. Some fall booking is being done and a few small shipments are being made.

Furnaces. — There are unmistakable signs of reviving activity in the furnace industry. Building operations have been rushed along and in a large percentage of cases it is now possible for the furnacemen to start work. Some large orders are being filled. An exceptionally busy fall is expected. It is now certain that building operations will be largely in excess of last year and that, of course, spells a larger demand for furnaces than ever before.

Heating Accessories.—An advance has been made in the price of stove pipe, reference to which will be found elsewhere.

WINNIPEG.

Winnipeg, June 10.—This is the quietest time of the year in stove business in the west, and things have settled down to the normal following the remarkable demand for summer outfits during the latter half of May.

There is, however, a good average trade in cooking ranges of the medium class, both in the city and country, and the prospects for fall business, especially in heaters, were never better.

The great demand will undoubtedly be for the heater of the class that will burn indiscriminately, wood or hard or soft coal.

Wood supplies near the railroads are becoming exhausted, and many farmers now burn coal who used wood entirely a few years ago. In the city it is now generally admitted that coal is the more economical fuel, but wood in large quantities will no doubt be consumed for many years.

Methods of Retailing Paints and Varnishes

Attention Focussed on Glass Situation

If Trouble Develops in Belgium, the Glass Industry in This Country Will be Seriously Affected—Market Has Not Shown Any Effects Yet—Stocks Are None too Heavy at the Present Moment.

The situation in Belgium has been watched very closely by everyone connected with the glass industry in Canada, and that includes all hardwaremen. There have been no developments, startling or otherwise, since last week. This lack of developments instead of proving reassuring has in reality increased the anxiety felt in this country. Glass importers had hoped to hear of the settlement of the labor troubles. In this case, no news has been accepted as bad news.

Reports were published in the newspapers at the end of last week that the labor dissatisfaction was spreading, and that efforts were being made to get the glass workers to cease operations. Reports since then have been fragmentary and vague, so that considerable uncertainty now exists as to the real condition of affairs there.

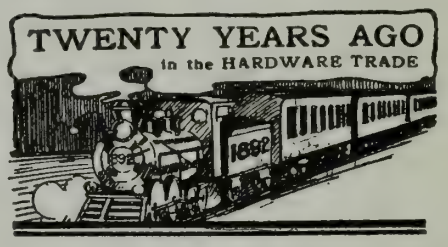
It is acknowledged by glass importers and jobbers that the suspension of all work in the Belgium glass industry would have a serious effect on the Canadian glass supply. While the Belgium producers have their summer stocks pretty largely complete at the present time, the trouble would come in making shipments. If the strike were to spread and become general, they would find it a very difficult matter to fill their orders. It can be put down as an assured fact that deliveries would be very much delayed. Some importers are inclined to look on the dark side of it, stating that in such a contingency there will be little glass exported until the trouble is settled.

Stocks Not Heavy.

Those who hold this pessimistic view have every reason to be alarmed, for certainly there is not enough glass in Canada to meet the fall demand. Stocks are fair for this time of year, but they would not go very far when the rush began. Some houses report that they are pretty well stocked up, but others concede that they are not in a good position to face lengthy delays in the filling of orders.

No Effect Yet.

So far, however, the situation has had no effect on the trade in Canada. While some jobbers have stiffened up their prices a little, the prevailing quotations have not altered. This is accepted as evidence that the handlers of glass are not anticipating any serious or prolonged shortage.



Neither has the demand quickened to any appreciable extent. It would seem natural for the consumers of glass to show haste in laying in supplies when the future was uncertain. There has not been any evidence of a rush to stock up in glass. Business is good, of course—for this time of year—but there has not been any sudden stimulation in demand since the trouble in Belgium developed.

To further complicate the situation, it is reported that glass manufacturers in other countries are finding difficulty in filling their orders.

A CLEVER DISPLAY.

The accompanying illustration shows a display of paint and accessories in the store window of H. Winkle, 328 Danforth Avenue, Toronto.

The display was in every respect a creditable one. It was attractively arranged and in consequence was calculated to draw attention. This was certainly the result, for the display was noticed and favorably commented on by practically all persons in that section of the city. The effect on sales was noteworthy.

The following items were taken from the issue of June 18, 1892:—

"With so many foundries running short since the beginning of the year, there is reason for expecting a shortage in the supply of stoves in the fall. Labor conditions in Hamilton and Kingston and the removal of the Stewart Works to Woodstock have disturbed the stove-making industry materially."

Editor's Note.—There is some danger of a stove shortage this fall but for a far different reason. The demand is so large at present that it is feared the manufacturers may not be able to meet it when the fall rush begins.

The Hardwareman and the Caterpillar

These Pests Must be Fought by Scientific Means, and Upon the Hardware Man Falls Much of the Pioneer Work — He Must Recommend Spraying—By Doing This He Will Gain the Farmers' Good Will, and Benefit Both Directly and Indirectly.

A train was stopped for hours near Ottawa the other day because caterpillars lay thick upon the track. That such a thing should happen fills one with amazement. To have a train stopped—and yet these caterpillars are doing greater damage than this. They are menacing the fruit supply of the Dominion. They are threatening our shade trees. They have brought it forcefully home that they are a pest, and one which must not be lightly regarded.

Archbishop Bruchesi, of Montreal, has felt the need of action against these grubs, and has instructed his priests to urge their congregations to fight the caterpillars. Thus much good may be done; but the fight will have to become more general, and it will have to be waged intelligently. There are means available of stopping the ravages of these grubs. If they are taken in time they can be destroyed. To secure this result a small outlay is necessary, but hundreds of dollars are saved.

Spraying the Remedy.

Why the Department of Agriculture has not devoted more attention to these pests; why it has not scattered widecast information which would enable the farmer to combat them, is a little hard to understand. But if the Government has not thoroughly done this, much information has been spread through other sources, and growers are quite generally coming to know that by spraying they can save their trees and plants.

But there remains much work to be done, and much of it must be done by the hardwareman. He comes in touch with the farmer. He knows where trees are being harmed. If he can suggest a remedy he will not only reap the benefits which come from securing the friendship of the farmer, but he will reap the profits which come from selling the insecticide and the other pest killers.

Something May Yet be Done.

There is an old motto which declares it is never too late to mend. Its age saves this from much challenging; yet there are many who believe that it is often too late to prevent, at least. Caterpillars, for instance, have already done great damage in many quarters. Taken in time they could have been well nigh exterminated, but left alone they have multiplied and multiplied, until they have stopped a train, and have eaten the leaves and the flowers off many trees.

It seems too bad that this should be so, yet there is still time for the hardwareman to do something; and there is all the time required to prepare the farmers to fight the grubs properly next season. Now the caterpillars and tussock moths are fresh in the memory of the farmer. Let him know now that he could have saved his tree by spraying with lime sulphur, with arsenate of lead, with arsenate of zinc or some of the other prepations. He will remember.

Benefit for All.

It has been the tussock moth which has done most of the damage this year. This grub comes from cocoons in the spring, and feeds on the leaves of all kinds of fruit trees. But let the leaves be sprayed with arsenate of lead, and the moths will die. One spraying will probably not be enough, but an application takes little time and little money; and it means life to the tree, profit to the farmer and fruit to the consumer.

Men are to be seen now burning down the great webs in which the caterpillars form—a tedious work, though a necessary one as things stand. But were the spraying started at the right time this would not be necessary.

Of course, the tussock moths have gained a footing, so to speak, now. They cannot be exterminated all at once. Why the Government entomologists have not aroused the people sooner is a question. Had all been informed of these pests, and of the way to fight them, there would have been little damage done this year. But the farmer has been left rather to his own resources, and so he has been somewhat slow to learn. What information he has gained he has secured largely from the manufacturers, who have studied the moth and the means of combating it.

Where Good Has Been Done.

That this information is effective is evident from an inspection of the Niagara Peninsula. There the farmers have eagerly seized whatever suggestions were available. They have been spraying, and they have found that this did all that was claimed for it. Their trees have been saved.

One of the reasons why these pests are doing such harm is that many of them are not in their proper element here. In their native land there are other pests which prey upon them and keep them from multiplying too fast. Here one pest has come without the other. So there is no natural agency to counteract the rapid reproduction of the grubs.

"Big bugs have little bugs upon their backs to bite 'em;
Little bugs have lesser bugs, and so ad. infinitum."

So runs a bit of doggerel dealing with this subject. It expresses a great truth, as may be shown from one example.

How Pests Multiply.

The San Jose scale came to California about 1870 from China. There the lady bug preyed upon it, and kept it from spreading too widely. Here there are comparatively few lady bugs. The San Jose scale therefore had no natural enemy to face. It spread rapidly. The scales attach themselves to leaves and take of the plant's life sap. Then the scales reproduce, and lo! there are one hundred where formerly there were but one.

The damage this scale has done can hardly be estimated, yet spraying with lime sulphur kills it. If the use of this spray becomes general the scale will probably be completely exterminated in a few years. In the meantime the few users are reaping the benefit. In spraying they are finding a means of keeping life in their trees.

Dependent on Skill of Men.

There can be no doubt that the fruit growers and horticulturists have to depend upon the skill of man to combat these pets. Other grubs will not prey upon them. The conditions are not natural. The pests themselves, in many cases, belong to other countries. By some unknown means they got to fresh soil, and behind them they left the animal life which kept their own down in numbers. The fight therefore has to be carried on by scientific means. And the end cannot be secured by placing sticky substances upon the trunk of the tree, so that the caterpillars cannot climb up to the leaves. Nor is burning the cocoons the proper preventative measure. Both these means are of some use when things have got to the pass which they have now reached in many localities; but the real fighting—the fight for extermination — must be done through spraying. In this fight the hardwareman will have to take an active part. He has done much in the past. He will have to do more in the future. The hardwareman can advise the farmer. He can supply him with the valuable information which the manufacturers prepare. He can carry the right lines and learn something about their use so that he may recommend wisely. He will reap great benefit, for what benefits the farmer benefits all.

There's Money in the ML Line

ML goods are made to build up trade for our dealers and ourselves. They have to be good, and they are good because we've been in business for 20 years—long enough to know that the way to succeed is to give full honest value for every dollar's worth we sell.

M L PAINTS

Under weather tests ML Paints have stood up better than the many "best" paints in the market. You can surely get particular trade with ML Paints.

M L FLOORGLAZE

A quick drying, glossy, wear - resisting finish—good for any paint purpose. In solid and transparent effects. Many shades. Well advertised.

ELASTILITE VARNISH

A favorite with folk who know that quality pays though it seems to cost more at first. Elastilite is splendid for any varnish need, indoors or out.

DECORATIVE AID DEPARTMENT---A Help for Every Decorator and Dealer. Color schemes, and technical information given, by which any dealer may sell exactly the right paints in the right shades to properly decorate any house. Stencil designs, etc., included in information. This plan helps you get more business. Services are free. Write for Decorative Aid Booklet.

"When you are sure of your argument keep hammering at it. Truth strengthens with repetition."
—OLD PHILOSOPHY

The Ability of Paint

Ability—that's the word that signifies more than any other the value of paint. It's the word we harp on, because it represents the point wherein lies the superiority of Lowe Brothers' "High Standard" Liquid Paint. That's why it will bear repetition.

If a paint made of soft soap and butter milk would cover more surface; cover it better, work more easily, wear longer and leave a better surface for repainting than any other paint—then, that paint would be best to use.

Remember its not "What is in a paint," but "What will a paint accomplish." Purity signifies nothing. If an alloy strengthens then it is better than the pure. It is **ability** that counts—not material.

Lowe Brothers' "High Standard" Liquid Paints win on their ability—serviceability—durability. Investigate the truth of this statement.

Weekly Market Report --- Paints

AN ENORMOUS DEMAND.

The feature of the paint market is the remarkable proportions to which the demand for prepared paint has attained. The manufacturers are finding it difficult to fill their orders.

White lead is almost certain to advance again shortly.

A higher price is expected shortly for turpentine.

Paris green has advanced 2 cents.

MONTREAL.

Montreal, June 13.—Only last week a further advance of 15 cents was reported for white lead. Now the corroders are holding another meeting, and it seems altogether likely that they will at this fix a still higher price for the commodity. During the week the pig has leaped in price, and the manufacturers now have to pay 23 cents a cwt. more for this than they had a week ago. But this is not all. Price is indeed almost a minor consideration. The thing is to get the lead. It is scarce in the extreme.

Later, probably, it will be possible to announce what was decided at this afternoon's meeting. It would seem, however, that an advance must be determined upon. The question of greatest interest is how much this will be. Reports now current suggest that the increase will be larger than any which has been made recently.

Generally the market is strong. There is a tremendous call for paint, for white lead, for putty, for varnish—for all paint lines, indeed. The weather has been wretched. A poor season might have been expected, but instead of that the orders have been piling in from all parts of the country.

The probability of an advance in paint is still discussed, and while it is quite generally admitted that such an advance will have to be made, there seems a desire to put off the day as long as possible.

White Lead.—Still no lead can be secured from British Columbia. All that is being used is being brought from England, and there the market is exceedingly high. Now the likelihood of the dockers' strike assuming national proportions makes the situation even more serious. It is certain to make the local market still further starved, and already there is practically no pig lead to be had.

Linseed Oil.—Prices remain at $1.00 and $1.03, with very little desire on the part of paint manufacturers to sell. There seems some likelihood that the price will advance. The India crop of flax is now finished, and the Plata crop is problematical. It has been rather disappointing, the seed yielding less oil than could have been expected. On the other hand the Canadian crop has proved better than was expected, but this does not mean a lower price here, as long as the United States manufacturers have to import as much Canadian seed as they now have.

There does not appear any great reason for expecting an immediate change in the price of linseed, but a month or two may see an upward movement. It looks like a continuance of high oil.

Turpentine.—Still this market presents no features of interest. Prices remain at .70.

Glass Worth Watching.

Glass.—The Belgian situation is causing anxiety. Stocks here are fairly satisfactory, but they are naturally reduced at this season, and if shipments have to be cancelled, there will be a shortage which may interfere with the filling of orders all year. Handlers are watching the turn of events with keen interest, but are loath to say anything regarding price.

ADVANCE IN WHITE LEAD.

(Special to Hardware and Metal)

Montreal, June 14.—White lead advanced here to-day 25 cents per hundred pounds.

TORONTO.

Toronto, June 13.—The feature of the market is the extreme activity noted on every side. Just what has caused the remarkable increase in the consumption of paint is hard to determine. The fact remains, however, that all manufacturers and jobbers are breaking all records this year in point of volume of sales. One firm announced this week that they were seriously considering calling their travelers in off the road. They were so loaded up with orders that to secure more was only to pile up trouble for themselves.

Oil Very Scarce.

Linseed Oil.—The price remains the same, $1.05 for raw and $1.08 for boiled. There is quite a marked scarcity at the present time. Supplies are low, and as the demand continues heavy, there seems every probability that the scarcity will continue. No one is looking for lower prices in linseed oil for some time at least. Some even predict that the price will advance, but there is nothing at present to indicate that this will be the case.

Turpentine.—Although turpentine is still selling at 69 cents, it was stated to-day that an early advance was on the boards. The price has gone up at Savannah, and at the figure now quoted here, the jobbers are not realizing any profit. The demand at present is heavy.

White Lead.—Rumors are rife that another advance in white lead is pending. Advices are to the effect that the prices in England have been materially advanced, and pig lead continues to go up. The grinders, it is said, are not anxious to book orders ahead, which evidences the uncertainty felt as to future quotations.

The demand for white lead is very heavy and in some cases it is being found very difficult to fill orders promtly.

Glass.—The demand for glass is reasonably heavy at the present time. The situation in Belgium is causing considerable uneasiness, but has not affected the local market yet.

Putty.—There is a pretty good demand for putty. Prices are as follows: Standard bulk in casks, $2.40; in 100-lb. drums, $2.55; in 25-lb. drums, $2.65; bladder in barrels, $2.80. Pure putty prices are as follows: Bulk in casks, $3.00; in 100-lb. drums, $3.40; in 25-lb. drums, $3.50; bladder in barrels, $3.40.

Paris Green Advances.

Paris Green. — The price of paris green has been advanced 2 cents. Quotations for Ontario now are: Petroleum barrels, 17¼c per lb.; arsenic kegs, 17½c per lb.; 50 lb. and 100 drums, 18½c per lb.; 25 lb. drums, 18¾c per lb.; 1 lb. papers, 20¾c per lb; 1 lb. tins, 21¾c per lb.; ½ lb. papers, 22¾c per lb.; ½ lb. tins, 23¾c per lb.

WINNIPEG.

Winnipeg, June 10.—Travelers report satisfactory business in sorting and filling stocks at country points, and in the city the painting season is now on in earnest, and judging from the large amount of new wood work to be covered independent of the freshing up of older buildings, dealers in paints and oils have a very busy season ahead.

There has been good business in kalsomines and other house cleaning materials during the past two weeks, but it is now falling off.

Prices are steady, but the high prices of flax would seem to forecast an advance in linseed oil and products.

Dependon——Light Hard Oil Finish.

Everlastic——Quick-drying Floor Varnish.

Gold Medal——Inside and Outside Varnish.

—These three varnishes meet all the regular demands of your trade—simplify your varnish stock—increase your varnish profit.

If any part of your house or your customer's house, is in need of varnishing, the requirement is met by one of these three B-H Varnish Specialties—Gold Medal, Everlastic, Dependon.

GOLD MEDAL.—If the front door, porch, ceiling of bathroom wants brightening, Gold Medal, Inside and Outside Varnish, gives pleasing results with its easy flowing action, and will protect the exposed surface with a durable coating, which will fight the effects of moisture and changing temperature.

DEPENDON.—If the furniture, wall, inside door, or any interior work, of either hard or soft wood, is in need of finishing or renovating, Dependon dries free from tack in a few hours, and can be polished, if desired, in twelve, stands hard wear and dries with a brilliant lustre.

EVERLASTIC Quick-drying Floor Varnish has these special qualities. It dries hard and makes a very durable coating. It is elastic and tough. It does not show heel marks nor scratches easily. It dries quickly. Has a fine lustre, and can be walked on the next day after application.

These varnishes are sold in beautiful, lithographed gallon, half-gallon, quart, pint, and half-pint cans, imperial measure. The packages make a most attractive store display. Handsome lithographed illustrated signs will accompany your order.

Write for favorable quotations. Address our nearest office.

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

THE fullest measure of profit from your Paint Department is assured by stocking a clean cut quality line supported by common sense effective selling methods.

There never was a line of Paints put on the Canadian market that has become so widely known in so short a time and which is handled by so many of Canada's most discriminating dealers as the MINERVA Line.

There is a reason for this phenomenal success.

1st.—The quality is in the goods and the Imperial quantity is in the cans.

2nd.—The Minerva Head on a can of Paint means that there is 78 years paint-making experience and reputation behind the goods in the cans.

3rd.—The quality of the goods is supported by the most effective selling methods ever devised to promote Paint sales in direct support of the dealer's business.

Ask any Minerva Agent.

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.
377-387 CARLAW AVENUE, TORONTO, ONT.
Established in England in 1834 (L-73)

Steel Tanks and Self-Measuring Pumps for Paint Oils

They avoid all the loss and inconvenience sustained under the old method. The steel tanks are air-tight and will not permit the oil to gum or stick. The pumps measure the oil according to the Imperial Standard, directly into the customer's can. They count the gallons pumped and compute the charge for fractional gallons.

THE BOWSER PAINT OIL SYSTEM

will put every cent of profit into your pocket, where it belongs. With a Bowser your paint oil department will be as clean and inviting as your shelf hardware department. It draws trade.

Why not investigate now and increase your paint oil profits. Your fellow merchants are using them. They'll help you. Ask for book No. 15.

S. F. BOWSER & COMPANY, INC., TORONTO

Paris Green—22 cents per 112-lb. drums.

PRICE TALKS

Louder to some people than does anything else.

To make price the only point is however the greatest of mistakes.

The real consideration should be "VALUE" and all this word stands for.

When you handle

JAMIESON'S

PURE PREPARED PAINTS

BRIDGEBURG, ONTARIO
NEW YORK BUFFALO CHICAGO
LONDON PARIS HAMBURG

A Plague of Caterpillars.

A plague of caterpillars is reported in various parts of the Eastern Townships. Fruit trees and bushes are especially infested.

The above clipping taken recently from a Montreal Morning Paper is only representative of the situation that is developing in every part of the country. On account of the rapid increase of destructive pests, to-day, the orchard or garden owner must spray if he wishes for a full crop of good quality. In fact in some sections of the country he must spray to preserve his fruit trees from total destruction.

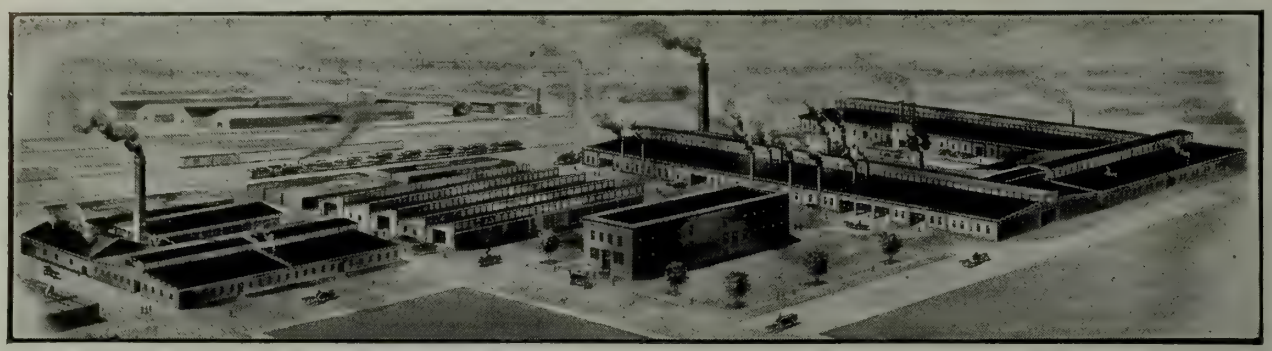
The Hardware Man's Opportunity

This situation is a business opportunity for the progressive merchant. There is a rapidly growing demand for effective insecticides for use in spraying mixtures. The man who goes after this business now will find in two or three years that he has added a very profitable line to his stock. Write for prices to-day.

The Canada Paint Company's Pure Paris Green.

This product has been on the market for years. Quality is of the best. Made in Canada to suit Canadian climatic conditions. Stays well in suspension. Always up to standard and absolutely reliable. Put up in ½ and 1 lb. packets also 1 lb. tins, 25 lb. and 50 lb. drums, 250 lb. kegs.

The Canada Paint Company's Neutral Arsenate of Lead.



A soft smooth white paste that mixes readily with water or other spraying compounds. A strictly Neutral Lead which does not burn the foliage or russet the fruit like cheap Arsenates or Acid Arsenates. On account of its peculiar character it covers the foliage thoroughly and adheres to it for the longest possible time, even in spite of heavy rains. Put up in 1 lb. and 2 lb. glass jars, 5 lb. and 25 lb. crocks, 50 lb. and 100 lb. kegs, 300 lb. and 600 lb. barrels.

Write for Prices and Literature to-day.

THE CANADA PAINT CO.

MONTREAL TORONTO WINNIPEG

The cut shows the George White & Sons Co.'s plant, London, Ontario, Note well the location. The plant stretches out along the G. T. railway track—it lies right in the very danger zone of flying sparks and hot cinders. But that doesn't worry the Company in the least, for every building connected with the plant is covered with Brantford Roofing—and "Flying Sparks" are no menace to a roof protected with Brantford Roofing.

Get our BIG Profit-Earning Proposition!

Now is YOUR time to get ready for a good roofing trade, and ***quicker sales*** and ***bigger profits*** can be realized by handling Brantford Roofing than would be possible with any other line. For Brantford Roofing is the ONE best roofing on the market. SELL THE 100% PURE PAINT

IT Brings Buyers Back

No matter how hard you try to please your customer, *Mr. Paint Man,* nor how accommodating and courteous you are, if the paint you sell does not meet his requirements, does not give him perfect satisfaction, he will forget your smile, your accommodation and your funny story.

His disappointment will over-shadow all the efforts you made to jolly him along and he will think only of his misplaced confidence.

There is only one thing that will bring a buyer back — *that's satisfaction.* Satisfaction can only be insured by *quality.* —

MARTIN-SENOUR PAINT
100% PURE

brings buyers back — and it brings their friends also. Simplify your efforts to succeed by selling satisfaction — sell **Martin-Senour Paints,** and your business will be safe — there is not a possible chance to pick a flaw in the *Paint that's Pure.* Now is the time to decide. Will it be good value? — organized service? — a square deal? or — — "just Paint?"

THE MARTIN-SENOUR CO., Limited
Pioneers of Pure Paints

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

Why Not Sell the BEST Fence?

When you sell a fence your customer holds *you* responsible for its quality—not the maker. So why not sell the fence that will satisfy your customers and bring them back for more? Read what some dealers have to say about the

Peerless Fence Saves Expense

There is no fault to find with your fence. the fencing I put up four years ago is just as good as the day I put it up, showing no sign of rust and giving good satisfaction. It is an A No. 1 Fence. The **PEERLESS** around here stands the test better than any other make that I have seen.—John Mason, Spring Brook.

I have been well pleased with all the wire I have received from you. My customers are all highly pleased with all the **PEERLESS** fencing they have received from me, and although opposition is very strong in the community, **PEERLESS** Fencing is taking the lead.—Wm. F. Mills, Wheatley.

I must honestly confess I have found **PEERLESS** Fencing, once stretched, perfectly satisfactory. I have never seen any rust on it yet, nor have I received one complaint from the many different men I have sold wire to.—J. H. Craig, Metcalfe.

We manufacture farm and ornamental gates, lawn, farm and poultry fences of a quality that will build up good business for you. Write for particulars.

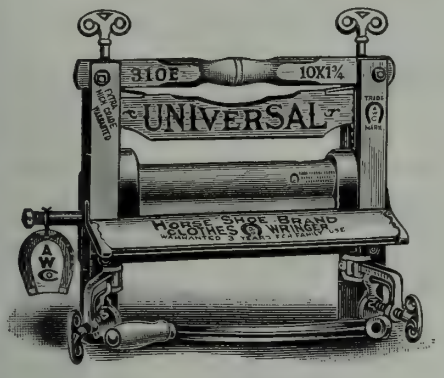
Not an Enterprise for the "Quitter"

"If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom

"He must know before he begins it that he must spend money—lots of it.

"Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.



"Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

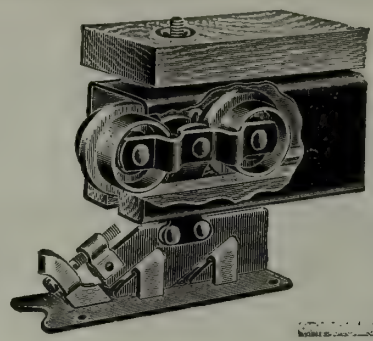
STAR HACK SAW BLADES

The dealer who stocks Star Hack Saw Blades will be able to meet all demands without the necessity of carrying a stock of blades of varying widths and number of teeth to the inch.



Star blades with 14 teeth to the inch are suitable for every class of work except tubing less than 1/16 inch. For such work we use Star Blade with 24 teeth to the inch.
Write us for our interesting proposition. Our FREE book "Tool Practice" is worth while sending for.

We both lose money if YOU are not a FORD dealer

We are spending large amounts of money to help you sell Ford Auger Bits. Our magazine advertising, together with our personal letters to carpenters, electricians, mechanics, etc., reach practically every Auger Bit user in the country.

We're telling them why they should use **FORD** Bits — just wherein they're superior to all others, showing how better results are obtained through their use, and asking them to call for FORD Bits by name.

We need YOU— we want YOU

You'll find FORD Bits easy and profitable to handle, because our advertising makes sales easy and the lasting satisfaction that every **FORD BIT** gives makes each sale profitable. A Ford buyer is a steady customer.

You run no risk in handling Ford Bits—each one is thoroughly guaranteed—guaranteed on a money-back basis.

You can help us—we can and will help you.

Let's get together.

We'll promptly send you samples, catalog and name of nearest jobber.

A Common Sense Talk

AIR IS CHEAP. You do not pay rates for air like you do for water, yet a big fuss is made over the impurity of water and very often no thought is taken of the impurity of the air breathed from day to day and night to night. Crowded rooms, whether in public places, schools, opera houses or factories, require ventilation as well as the private dwellings.

House Building is a Science Nowadays and no Building is Complete Without one of our J. W. Harris Ventilators.

THE VENTILATOR ITSELF IS AN ORNAMENT and can be made to suit the character of the building, either as to size or as to quality of material.

MONTREAL, Dec. 4th, 1905

MESSRS. J. W. HARRIS MFG. CO., Ltd.

ROSS BROS. Ltd., EDMONTON | **CANADIAN FAIRBANKS-MORSE CO.,** WINNIPEG - - - SASKATOON | **METALS Ltd.,** CALGARY

Long Service Is A Natural Result Of The "Twisted-While-Hot" Process

It must be annoying to the average drill user to have drills made from well-known brands of steel fall down on the job. He wants efficiency and can't get it because it's milled or ground away in the process of manufacture.

"Hercules" High Speed Twisted Drills

are made from a High Percentage Vanadium High Speed Steel under the only "twisted-while-hot" process that retains all the strength of the steel in the finished drill. The grain of the steel is undisturbed, insuring longer edge-holding and greater resistance to the strains of the metals having different degrees of hardness.

The taper shanks, usually one size larger than ordinary, prevent tag troubles and give a greater driving power because the drill fits into the chuck firmly and in the center.

Your jobber will supply them or you can send order direct. Send for Catalog 74-B.

NEW YORK PHILADELPHIA CINCINNATI LONDON, ENG.

Nicholson-made Files are the Standard of File Quality

The entire output of the Nicholson File Company in 1864 was 100 dozen per day. At the present time 16,000 dozen Nicholson-made Files are sold every day and shipped to all parts of the civilized world. Unvarying good quality, coupled with progressive methods and strict specialization, is the cause.

In Canada these are the well-known factory brands made by the Nicholson File Company:—

"AMERICAN" "ARCADE" "GREAT WESTERN" "GLOBE"
"EAGLE" "McCLELLAN" "KEARNEY & FOOT" "J.B.SMITH"

Nearly every file user in Canada has a preference for one or more of these lines above all others. You can stake your reputation upon their absolutely uniform and satisfactory quality.

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

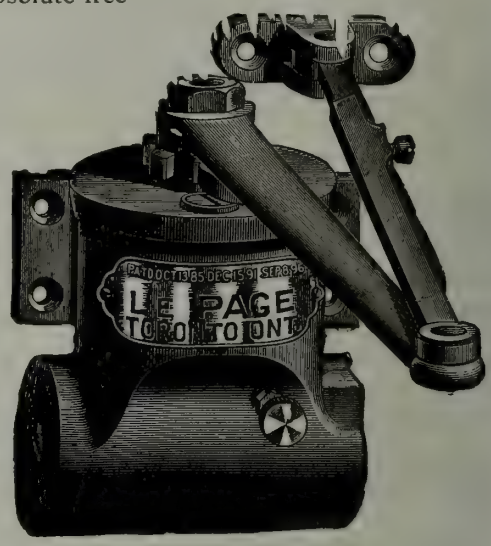
The "LE PAGE" Patent OIL DOOR CHECK and SPRING

is a marvel of simplicity and has a mechanical action that is perfect.

It is the only door check made without packing in its working parts, which assures absolute freedom from packing friction.



The door on which this device is used cannot slam, as the oil in the spring cup of the check forms a cushion, which keeps the door under perfect control and allows it to close quietly.

The spring tension is applied by means of the ratchet wheel on top; the checking power is controlled by the thumbscrew at the right.

The bearings are long and the spindle, with crank at lower end, is drop-forged from cold rolled steel.

Toronto public schools, Simpson's, Eaton's, etc., use this door check exclusively.

Write for circular and prices.

Why not make 1912 the most profitable saw year in your history?

ATKINS STERLING SAWS

MADE IN CANADA

THEY are Quality Saws. They appeal to the best mechanics and are backed up by an aggressive advertising campaign that pays. Write us for full information. It will cost nothing to at least investigate the merits of this important line. Address

E. C. ATKINS & CO.,

MAKERS OF STERLING SAWS

HAMILTON, ONTARIO

Vancouver Branch, 109 Powell St. **U.S. Factory, Indianapolis, Ind.**

CAN WE HELP YOU

There are some hardware dealers living in this 20th Century who are still using 19th Century methods. They do not realize that Halifax is closer to Vancouver to-day than Montreal was to Toronto fifty years ago.

Twenty-five years ago it was a calamity for a merchant to lose a good clerk, for he knew it was practically impossible for him to get in touch with an experienced man. Such an idea as making a deal with a fellow hardware man a couple of hundred miles away either to buy a set of tinners' tools or to sell a second-hand counter or show case, did not seem practicable to even the most progressive hardware men. If a man wanted to sell his business he had to accept the highest price he could get from some one of his fellow townsmen, for no one else knew of the opportunity or had any means of finding out about it.

To-day the up-to-date dealer

CREATES HIS OPPORTUNITIES

He states his wants briefly in a "Hardware and Metal want ad." and in four days' time practically every hardware merchant, clerk, hardware manufacturer and traveler has read the proposition, and it seems reasonable that somewhere among the "blue noses" of the Maritimes or the pioneers of the boundless West someone will want just what he has to offer.

EVERY HARDWARE MERCHANT IN CANADA

can take advantage of our "want ad." page. Ask yourself:

Is there not some article I would be better without if I could get a fair price for it? If you cannot get a fair price for it by appealing to the trade throughout Canada you had better sell it for scrap

We can help you, but you must take the first step.

Surely it is worth 25c or 50c to find the one man in Canada whose wants dovetail into just what you have to offer.

RATES: *(payable in advance)* **2c per word first insertion. 1c per word subsequent insertions. Box Number, 5c additional each insertion.**

Stanley Tools

Always insist that your order be filled with Planes made by the **Stanley Rule & Level Company,** which carry with them a guarantee backed by a Company who have been manufacturing Carpenters' and Mechanics' Tools for over half a centuty.

These tools are now made at our Canadian Works.

STANDARD THE WORLD OVER

Stanley Rule & Level Co.
NEW BRITAIN, CONN. U.S.A.

EVERY TOOL GUARANTEED

SHARE IN THE PROFITS

Everybody's doing it—doing what? KILLING FLIES

Just now there is a boom in fly exterminators, consequent upon the anti-fly campaign being inaugurated all over the country.

ARE YOU GETTING YOUR SHARE OF THIS BUSINESS?

Hamilton aims at becoming known as the "Flyless City," and if this hope is realized, it will be due in a large measure to the wholesale use of our Balloon Trap and Canada Killer.

The Balloon Trap is a far superior method to sticky fly papers or poison pads. It requires no attention, takes very little room, and is always in working order. It can be emptied in a few seconds by drowning the flies.

For those who prefer to swat, the Canada Fly Killer is an ideal instrument. It injures nothing but the fly, which it kills instantly—WITHOUT CRUSHING. Flies may be killed on wall papers, table cloths, windows, etc., without danger of soiling or injuring the surfaces.

Balloon Traps packed 1 doz. in a case.
Canada Killers packed 1 doz. in a case.

PROMPT SHIPMENTS GUARANTEED.

CANADIAN TUBE & IRON CO., LIMITED, MONTREAL, Works: Lachine Canal

IT'S QUALITY AND ADVANTAGES THAT MAKE

CANADIAN HOWARD DOUBLE RADIATOR FURNACES

THE CHOICE OF MOST BUILDERS

The "HOWARD" Furnace means an enormous economy in fuel to the user, as the heat and gases have to pass through two radiators, thereby greatly reducing the heat by the time it reaches the smoke pipe, which, in the ordinary furnace would go up the chimney.

We employ only the most skilled mechanics and use only the best materials in the manufacture of this furnace.

Mr. Dealer, if you want to handle a line that will prove completely satisfactory to your customers, and a money-maker for yourself, investigate the HOWARD. Remember it is absolutely guaranteed. Write us for particulars.

The C. NORSWORTHY CO., Ltd., St. Thomas, Ont.

"Safelock" Stays *cannot* Slip

This is a mighty strong selling point. It means that the fence will stand up to the hardest usage from animals or the elements and still keep its height and shape unimpaired. And the fact that the strand wires do not have to be kinked, owing to the positive permanent grip of the lock, means that every wire will stand its full strain. The "Safelock" is absolutely the strongest wire fence made—you can sell it as such and the test of time will bear you out to the letter. There's good money in handling "SAFELOCK." Write us about the exclusive agency for your locality. Don't put it off—Write to-day,

The Owen Sound Wire Fence Company, Ltd., Owen Sound, Ont.

A Wide Circle of Users

SOCLEAN has a wide circle of users, especially in the summer season, because dust is more prevalent and disease germs more harmful.

SOCLEAN

positively will absorb the dust and also thoroughly disinfect the place where it is used, besides leaving a fragrant odor and lessening labor on the part of the housewife. It is a profitable line for the dealer.

Put up in pails to sell at 25c., 50c. and $1.00.

Ross Rifles Please Both Purchaser and Seller

The Rifles are good and cheap at the price, and dealers make a reasonable profit on them.

UP-TO-DATE DEALERS WON'T REST

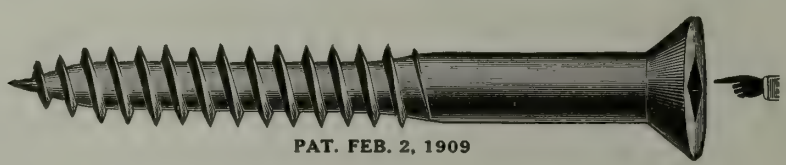
until every customer of theirs who seeks a rifle, and can afford it, has purchased a Ross High Velocity.

THE RETAIL PRICE IS $70.00

Dealers make their profit on a $70.00 sale instead of on $25.00, or $35.00, and the customer gets a rifle of which he may well be proud. For accuracy and power, it has absolutely no superior. Have these points ever occurred to you?

DISCOUNTS, ETC., ON APPICATION

THE ROSS RIFLE CO., :: QUEBEC, QUE.



ROBERTSON SOCKET HEAD WOOD SCREWS

The hardwareman who is wide awake can make excellent profits by boosting this new wood screw.

The square hole, into which a specially made screwdriver fits, has become extremely popular with every user. With this the woodworker can do the work in less time and without danger of destroying the wood, as the screwdriver cannot slip.

PAT. FEB. 2, 1909

We are also manufacturers of Hand Drivers, Yankee Bitt, Brace Bits, Rivets, Burrs, Washers, Nails, Wire, etc.

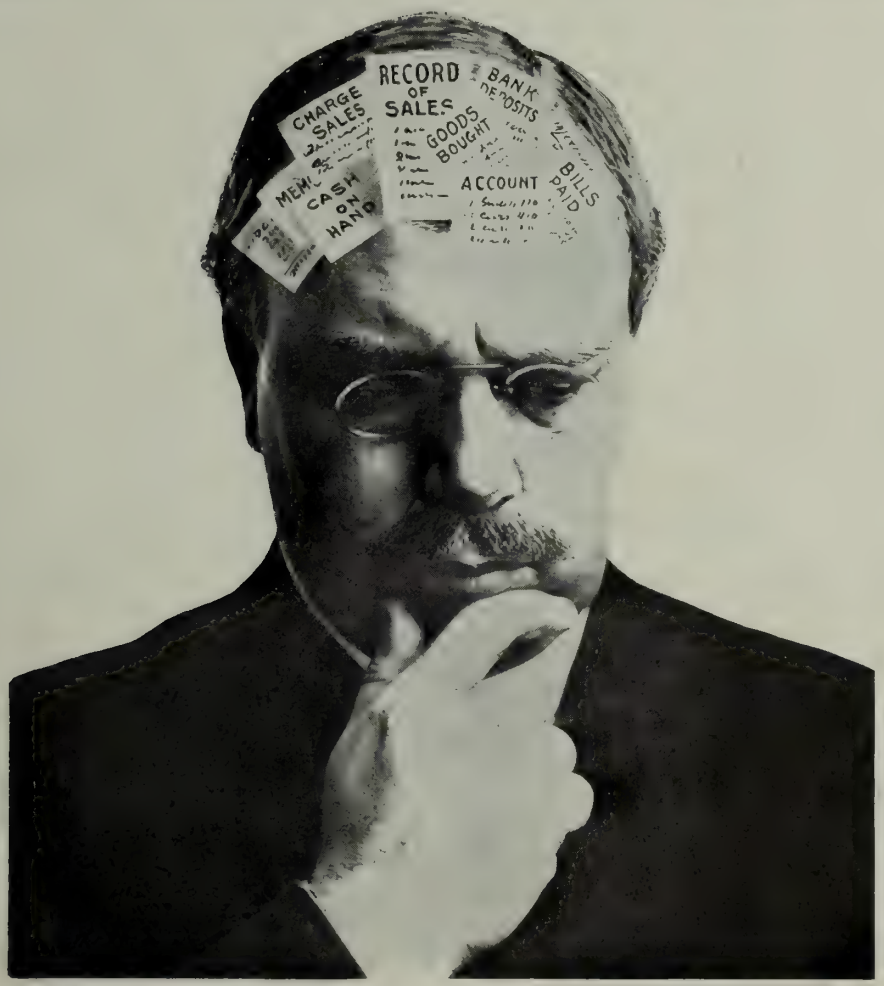
CANADA'S ONLY WEEKLY HARDWARE PAPER.



HARDWARE AND METAL

Published Weekly by

THE MACLEAN PUBLISHING COMPANY, LIMITED

Vol. XXIV. Publication Office: Toronto, Canada No. 25

June 22, 1912

THE merchant who tries to keep his business in his head can't keep ahead in his business.

His brain can't stand the strain—it's built to remember facts—not figures.

The human mind is never completely accurate.

The National Cash Register thinks with a brain of steel.

It keeps track of every detail of every sale—stops leaks and checks losses.

A store using a National Cash Register is run on system—it's bound to yield profit to its owner.

Over One Million have been sold. ***Write for Booklet.***

The National Cash Register Company

Headquarters for Canada: 285 Yonge St., Toronto

J. C. LAIRD, Manager in Canada Canadian Factory: TORONTO

Don't Let Your "GILLETTE DEPOT" SIGN Get Weatherworn.

You know how well that big blue-and-yellow "GILLETTE DEPOT" sign has served you for nearly two years. You know how much it has meant to have your store conspicuously marked out as the local headquarters for the GILLETTE Safety Razor and Blades.

Don't let that advantage slip away.

If your "GILLETTE DEPOT" Sign is not as fresh and attractive as it once was, write us right away. We have a new sign waiting here to replace it, and will ship immediately. Just state whether you want the flanged sign to project from the store front, or the square one which nails on flat.

If you show one or two bright, fresh "GILLETTE DEPOT" Signs, and a good line of GILLETTE Sets and Blades, you hold all the trumps in the razor game.

The GILLETTE is the keenest, quickest, smoothest-shaving and most satisfactory razor made. This means much to you and everything to your customers. The selling price is protected—there's no price-cutting—and you are always sure of a quick turnover and a substantial profit on every razor you take into stock.

Why waste your time, your window-space and your energy on "next-bests" or cheap foreign make-shifts? **Concentrate on the GILLETTE.** Give it a fair showing in your windows and on your counters. Write for (and use) the handsome store cards and other displays which we are continually devising.

Push the GILLETTE—identify your store with it—and you will find it the livest and most profitable specialty in your store.

Don't forget to write for that new "GILLETTE DEPOT" Sign.

CHICAGO SPRING BUTTS

A SUGGESTION

Have you a stock of Spring Hinges that have distinctive selling features which your salesman can offer and which would make the prospective purchaser buy them and no other?

Chicago "Triplex" Spring Butts

offer this advantage to you. The appearance, durability and finish of this article are unsurpassed, and in consideration of prices that are conservative in respect to value, the up-to-date dealer cannot afford to neglect this profitable business.

Send for Catalogue M 26. It fully illustrates and describes the most complete line of Spring Hinges manufactured.

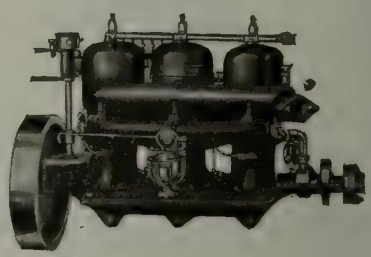
MOTOR BOATING

Will be more popular than ever this season



THIS year promises to be a record year in the motor boat field. When the season opens there will be a large number of new boats, and old boats fixed up. What are you doing to reap the benefit of this trade? Every wide-awake dealer should stock motor boat supplies and marine hardware. We carry the largest stock of accessories in Canada. Our Motor Boat Accessory Catalog is ready for mailing; a card asking for Catalog H. 24 will bring it to you.

If you are interested in Marine Engines you should have our Catalog H 23.

The S.M.P. Improved Deluge Sprayers

Unexcelled for Spraying Trees, Bushes, Plants, Potatoes, Vines, Interior of Henneries. Also Horses, Cattle and Swine for keeping off Flies and Lice.

The "DELUGE SPRAYER" throws a fine vapor spray, thus covering a wide surface, which is very important in the spraying of trees, etc.

At the same time it is a great economizer of liquid, and makes a small quantity go a long way.

RUSH OUR ORDER

SHIP QUICK

Instructions like the above will be appended to most of the orders received by the jobber during the balance of June and in July.

A "Rush Order" for a Success Refrigerator, a few Peerless Ice Cream Freezers, a "fill in" order for Sporting Goods, Lawn Swings or Chairs, Hammocks, Screen Doors, Wire Cloth and numerous other goods which have been neglected owing to our continued cool weather and long delayed summer, but which the sudden appearance of hot weather will start moving in feverish haste.

While we advise merchants to look ahead and be well prepared to serve their customers, we realize that we shall be called upon to ship "without delay" many orders during the next 30 days. **We are prepared to do it.**

Your Orders will not be delayed in this house; they will be shipped promptly and—what is equally important—complete without substitutions.

EVERY TOOL GUARANTEED

HIGH QUALITY GOODS

QUALITY is our first consideration when selecting our stock. We keep away from shoddy goods and trash as far as possible.

Our customers will find that even in cases where our prices are lower than other houses they will get the highest grade of goods consistent with price.

This means much to the dealer. He can with confidence trust us with his mail orders. Each article will be worth the money he pays for it, in many cases more than that, as we buy in large quantities.

It would be worth any dealer's while to look carefully through our 1400 Page General Catalogue. It illustrates so many lines he could add to his stock that would be profit makers.

Quick shipping facilities by boat or rail.

Enterprise Lawn Sprinkler

Enterprise Ice Shredder

Enterprise Flag Pole Holder

HERE'S Three Good Sellers—Made Right and Backed Up by "ENTERPRISE" Efficiency.

The good old summertime will soon be here, and with it comes a demand for Lawn Sprinklers, Ice Shredders and Flag Pole Holders. Be ready for it by keeping a good stock on hand, but be sure you handle the Enterprise line, because these are always good sellers. The name Enterprise on any article stands for efficiency, quality and confidence. Enterprise Lawn Sprinklers, Ice Shredders and Flag Pole Holders will do all that's claimed for them.

ENTERPRISE

Lawn Sprinklers, Ice Shredders and Flag Pole Holders

have many points of general superiority not found in other makes. First-class material, expert workmanship, careful inspection—the result, sterling quality and efficiency. Add to this our persistent advertising and it's a combination that can't be beat for easy selling.

These features have also made famous the Enterprise Meat and Food Choppers, Sad Irons, Sausage Stuffers, Coffee Mills, etc.—all of which you can handle with profit.

SHAFTING BEARINGS

Countless thousands of dollars have been wasted in power, oil, metal, labor etc. in a mistaken idea of economy by using cheap or inferior metals on shafting bearings. The following letters show the value of Magnolia Metal for that service.

THE CITIZENS ELECTRIC CO., LTD.
Smiths Falls, Ont., Jan. 25th, 1911

Gentlemen:—
Yours of the 27th inst. to hand and noted, Regarding the boxes you mentioned lined with "MAGNOLIA METAL" would say we have 60ft. 3½" shaft, running 300 rev. per min., running all night and every night in the year, put up over *10 years ago*, and still running perfectly, and has never been touched in that time except for oil, and one tablespoonful will run each box for 12 hours.

Yours very truly,
J. A. SCROGGIE, Eng. & Electrician.

KAUKAUNA GAS, ELECTRIC LIGHT & POWER CO.
Kaukauna, Wis., Jvne 15th, 1911.

Gentlemen:—
I have used "MAGNOLIA METAL" for the past six years. I placed some of this metal in chain oiling boxes on a 4-7-16" line shaft running 278 R.P.M. in October 1905. . This shaft has been running continuously 24 hours a day ever since. I have not found it necessary to rebabbitt any of these boxes to date nor have I had any burn-outs. I am also using Magnolia Metal for belt driven dynamos, ranging in speed from 900 to 1275 R.P.M. and have found the metal much more satisfactory than any other I have used,

Yours truly,
N. B. MONTGOMERY, Chief Engineer.

SPECIAL OFFER

PRACTICAL ENGINEER POCKET BOOK, 680 pages, over 2000 subjects. Price 40c. post paid. We do not aim to make a profit on these books. We buy them in large quantities as an advertising medium and give Engineers benefit of low price. They are highly spoken of by Engineers. Address Montreal office.

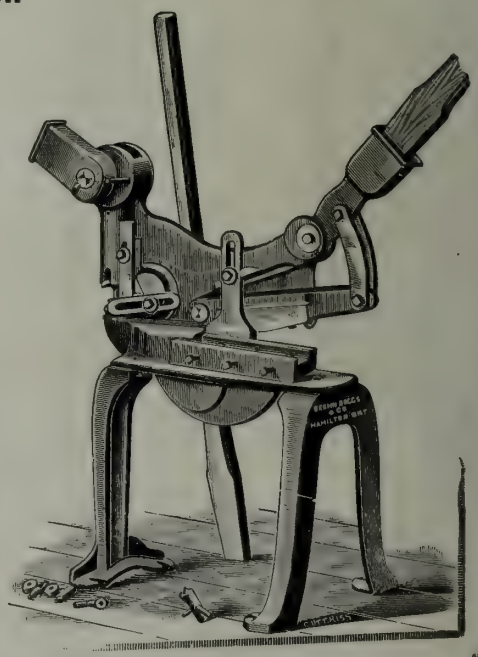
A Necessity to EVERY DEALER Who Handles Sheet Metal!

Our Combined Lever Punch and Slitting Shears



SAVE MUCH TIME AND LABOR

THIS is a machine that is constructed of the best material and made to stand years of hard service.

If you handle sheet metal and are not now using one of these machines you should install one at once. You will find it **indispensable after a trial.**

They slit any length or width of sheet required up to their capacity. Made in two sizes, viz.—Nos. 10 and 11. No. 10 will slit No. 12 gauge sheet iron, soft steel or bar iron 1/4" x 2" or 3/8" round, and will punch a 5/16" hole in 1/4" iron or its equivalent in lighter metal.

No. 11 is the same as No. 10, only heavier and will cut No. 10 gauge sheet iron or punch a 3/8" hole in 1/4" iron.

Write for Full Particulars and Discounts.

H&R ARMS Co

¶ Right in every hardware store is the most logical place for a line of reliable, accurate, and moderate-priced single guns.

For ridding premises of pests—snakes, rats, chucks and the many kinds of crop and poultry destroyers, the Harrington & Richardson single guns are specially suited.

¶ There is a large and growing demand for an economical and efficient weapon for just that purpose, as well as for occasional hunting.

Here's the gun:

TRADE H&R ARMS CO. MARK

TRADE H&R ARMS CO. MARK

Specifications, 12 to 28 gauge—26 to 32 inch barrel—ejecting or non-ejecting—fine black walnut stock—hard rubber butt plate—weight 5¾ to 6⅞ lbs., according to gauge and barrel. For black or smokeless powder.

¶ These guns are quick sellers. They are made and sold under the broad H. & R. guarantee of quality, reliability and satisfaction. With a few of these H. & R. guns in stock, the hardware dealer is equipped for a profitable and increasing trade.

Our 40-page catalogue is yours for the asking. It contains valuable selling points for every hardware dealer, and shows the complete H. & R. line. Ask for it now while you think of it.

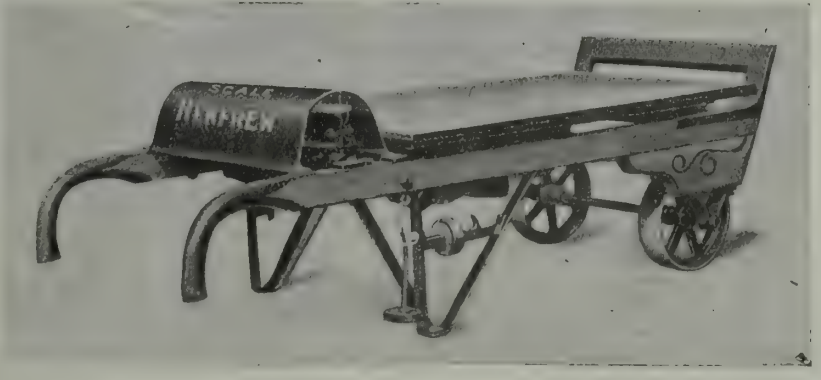
The "RENFREW" Handy Two-Wheel TRUCK SCALE

"A Convenience and Protection for Farmers"

This is a scale that pays the dealer A VERY ATTRACTIVE PROFIT—a scale that is becoming more and more popular every day with farmers.

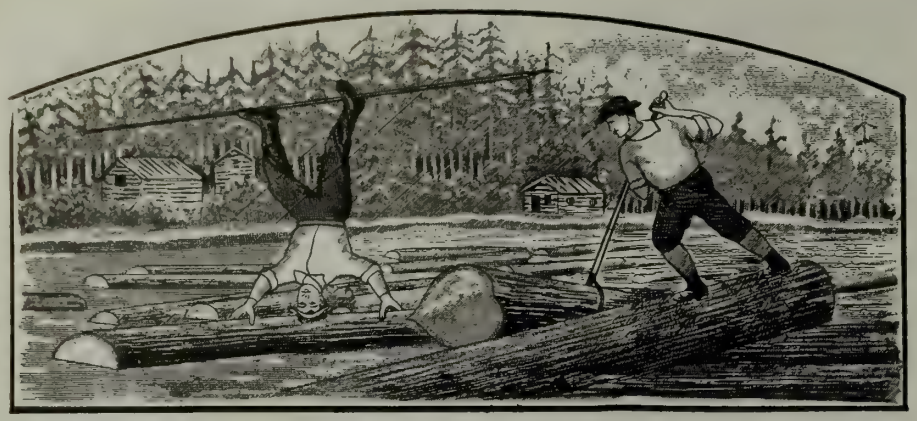
It is absolutely accurate and has many advantages over the common scale.



With this scale in his possession the farmer knows the exact weight of the products he is selling—he is armed against short weights.

The "RENFREW" TRUCK SCALES are GOVERNMENT TESTED and have been awarded their GOVERNMENT CERTIFICATE without question, and are backed by our WRITTEN GUARANTEE to be just as represented, and to give a long, reliable service. Capable of weighing anything from a single pound to 2000 pounds.

The "RENFREW" TRUCK SCALES are rigidly built and will stand all kinds of rough usage.



LET US SEND YOU ONE. Show it to every farmer who comes into the store, and see how many you can sell.

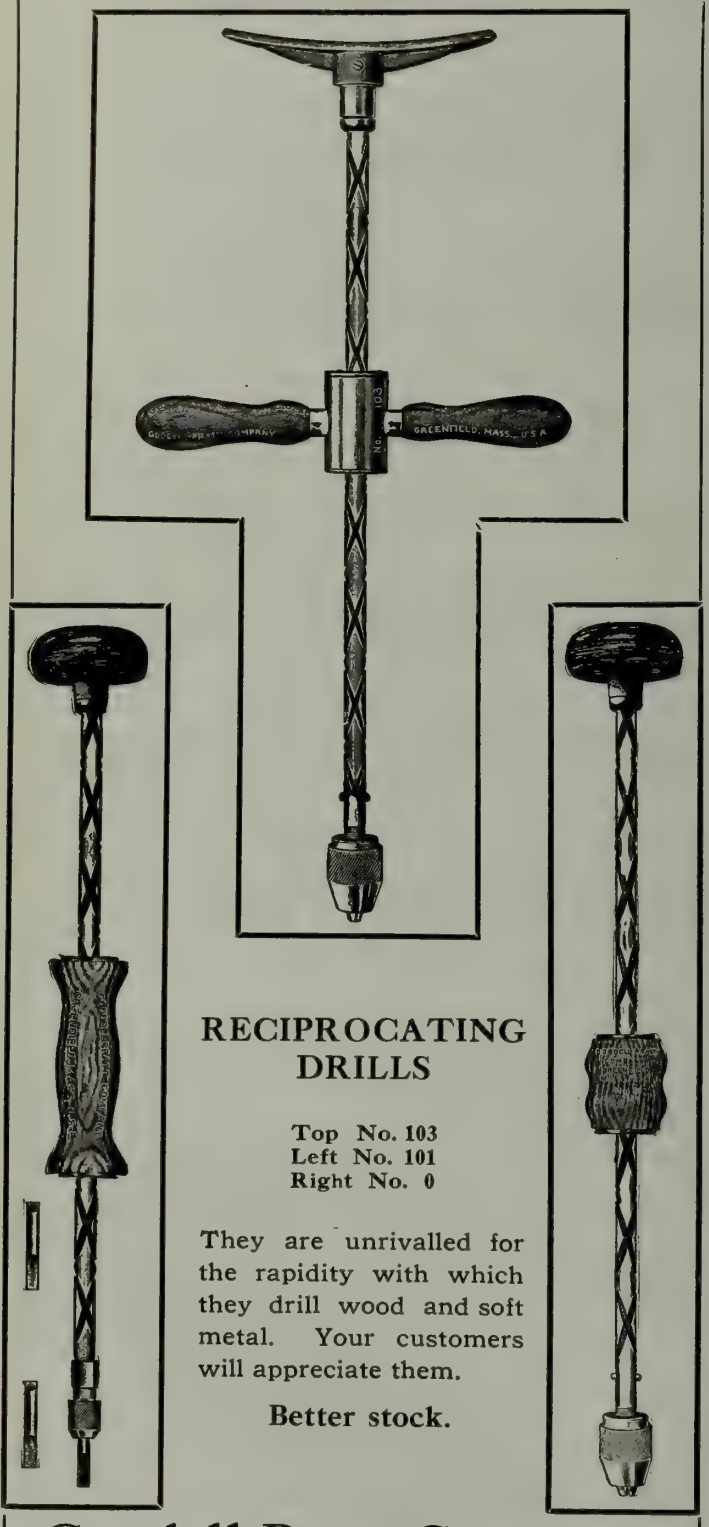
Not an Enterprise for the "Quitter"



¶ "If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom.

¶ "He must know before he begins it that he must spend money—lots of it.

¶ "Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.

¶ "Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

Free If You Are Not Satisfied

The New Preston O. G. Square Bead Eavestroughing

We have always claimed that our eavestroughing was the best on the market, but we have gone ahead and gotten out something that is far superior to our old make. Now we can claim that we can't be beat when it comes to our eavestrough.

Some time ago we advised all the trade that we were manufacturing O. G. Square Bead eavestroughing by machinery which assured absolute uniformity in shape, but it developed that our machinery was not heavy enough to produce as sharp a bead as we desired. We have now perfected and patented automatic steel dies to fit our large power press and we now guarantee a trough superior in shape, appearance and fit to any other on the market.

You can save time and solder in the erection of this eavetrough FOR EVERY PIECE IS EXACTLY THE SAME and fits snug and tight. There are more profits for you and more satisfaction if you use our make. See our special offer below and take advantage of it at once.

Cut out this ad. and mail it to us to-day with your order for 250 feet of our new O. G. S. B. Eavestrough and if it is not exactly as we represent it we will make you a present of it. This offer is good for thirty days.

Steel Lined Shot Shells

Each and Every One a Speed Shell

They have the speed that breaks targets nearer the trap. That's why *Remington-UMC* Steel Lined Shells have won 13 out of the 15 Handicaps held in the last three years.

The speed that gets that mile-a-minute "duck" with a shorter lead—that's why it takes over 50,000 dealers to supply the demand for *Remington-UMC* Steel Lined Shells.

The shooting fraternity are speed wise. They know loose smokeless powder won't drive shot. They know that the drive depends on the compression

The powder charge in *Remington-UMC* shells is gripped in steel. This lining is designed to give the exact compression necessary to send the load to the mark quickest. It insures speed—the same speed in every shell. The steel lining is moisture proof—no dampness can get through. Jar proof— no powder can get out. Waste proof—no energy is lost.

Urge Your Customers to Shoot *Remington-UMC* Steel Lined Shells and Get All the Drive of the Powder Behind Every Shot

Remington Arms-Union Metallic Cartridge Co. **299 Broadway, New York City**

Removing Counter Gives Display Room

Beneficial Results Have Been Secured in the "Soo" Hardware Company's Store by Using Silent Salesmen and Floor Space, Instead of Old-time Counters —Enables a Wider Variety of Goods Being Shown — Sales Have Proved the Benefit of This—Need of Making Stores Appeal to Women.

Another blow at the counter has been struck by W. J. Keyes, manager of the recently formed "Soo" Hardware Company, Sault Ste. Marie. Mr. Keyes does not think the counter is necessary. On the other hand, he does believe it necessary to show attractively as many lines as possible.

In the "Soo" Hardware Company store, silent salesmen are being used to take the place of the old counter. They meet many of the old needs, and they meet also the great new requirement of display. Over a silent salesman money may be paid out. Upon it an article may be demonstrated, and even while the demonstration is being made the customer may see within the show case some other article for which he feels a need.

Mr. Keyes has some interesting things to say regarding the results which he has secured by bringing his goods so prominently forward that even the chance customer must see a number of lines before he leaves the store.

To begin with, the paint department has been put right at the front. According to Mr. Keyes, it was not a question as to whether he could afford the space, but rather as to whether he could afford not to make so prominent a display. But something will be said of this paint display in a subsequent issue. It, therefore, may be passed here with this brief mention.

On the side of the store opposite to the paint department is a silent salesman, shown in an accompanying cut, which at this time of year conveys a message of tools. There are tools of many kinds, and experience has shown that each has its attractive quality. The "Soo," as everyone knows, is a rapidly growing city. As every one also knows, there are many carpenters in rapidly growing places, and as a result tools are in demand. Tools are always wanted by carpenters. These men may economize in many ways, but for the tools they use they will not spare expense. They want the best, and any dealer who can show a new design is going to get purchases.

Mr. Keyes declares that he has found it wise to show some well-known lines prominently. The carpenters will come to the store because they know they can get these goods there. While making their selection they will see the other goods, and perhaps will find something among them which will improve their kits.

Tools for the men. Kitchen goods and fancy ware for the women. This is a good rule, and one which might well be born in mind by all hardwaremen, for the day is past when the hardware stores can afford to neglect the women. After all, this is a day when the women are the principal buyers. The men are too busy making the money with which the purchases may be made to do much purchasing themselves. Upon women falls the brunt of the buying. They like it. Many men do not.

Make Store Appeal to Women.

This being so, and the statement of many dealers indicated that it is the case, it is strictly to the dealer's advantage to make his store attractive to the women. This need has been recognized by the "Soo" Hardware Company,

A view of the interior of the "Soo" Hardware Co. store—The insert is a picture of Mr. Keyes, the manager.

where near the front door has been arranged a silent salesman of cutlery and silverware. Moreover, silver and brass tea pots, coffee percolators, and similar lines are shown on this salesman. That is one of the great advantages of the glass show cases over the old-fashioned counter. Not only may splendid displays be arranged inside them, but the top itself is more valuable for display than was the top of the old-fashioned solid wood counters. Upon the glass the teapots stand out in striking manner. On the wooden counters they do not invite so much attention.

Display Brought Sales.

"I have no hesitation in saying," states Mr. Keyes, "that showing plated and silverware near the front of the store as we do, has brought us many sales. Women see what we have to offer them, and the purchases we have been compelled to make prove that they are willing to buy when they see what they want. I feel sure we would not have sold a quarter as much of this class of goods had we left our samples standing on shelves in a back part of the store."

Now, it is undoubtedly the best policy to show these lines prominently. Every wide-awake dealer will realize this, but many a wide-awake dealer has been troubled to know how he may accomplish it. There are so many lines to-day, it seems impossible even to bring samples of them to the front.

The devise adopted by the "Soo" Hardware Company, and by many other concerns, indicates, however, how much may be done in this direction. It is simply using the fourth dimension—density. The old wooden counter had a top and it had sides, but the inside of it was useless as far as the customer was concerned. Perhaps goods could be stored there, but this did not help the buyer to see the goods, and it did not greatly assist the dealer to sell them. Let the counters be removed, however, as they are in this store, and room is given for a wider display. The silent salesmen have not only tops, upon which goods may be attractively shown, but they have a capacious interior which is visible from many parts of the store. In that interior an arrangement of lines which are on sale may well be made.

More Space for Display.

And elsewhere, where larger goods are to be shown, the absence of the old counter will give more room. In the case of the "Soo" Hardware Company a good part of the extra room made by removal of the old-fashioned counters, has been given over to the stove department. Thus is secured space for a good stock, and for a proper demonstration of the stove. The results have been satisfactory. That they have been all will agree when it is stated that since the commencement of the year more than two carloads of high-class ranges and heaters have been disposed of.

There are those who object to hanging goods from the ceiling. They claim it makes an establishment look like a butcher shop festooned for Christmas. Perhaps hanging too wide a variety of goods from the ceiling might give some such effect, but there cannot be much question of the methods which Mr. Keyes has adopted of using the ceiling. He hangs from it lamps—and where more appropriately could a hanging lamp be shown than hanging from the ceiling?

Gets Foreigners' Trade.

The Soo, like the great majority of cities now-a-days, finds a large part of the houses equipped with electrical fixtures. Illumination is, therefore, secured by means of electric lights. But there are in the Soo a good many foreigners, and these are still using the coal oil lamp very largely. They want something bright and attractive. Perhaps some people would say they wanted something flashy, however, that may be, they know what they want, which after all, is the main thing, and shows them to be people of mettle. It is to this class that the ornamental hanging lamps are sold. These bring a good revenue, and are well worth handling, since they make the store attractive to a class of people who are good customers, and since they occupy a space for display which could not well be used by other goods.

Developments in the Cement Situation

A Reduction is Announced—Companies Hold Meeting and Decide to Ask Government to Restrict Reduction to West—American Companies Raise Prices in the West.

There have been developments of a highly important nature in the cement situation in the past week. Chronologically they have come as follows.

A reduction of 10 cents was announced by the Canada Cement Co., making their price $1.40 a barrel. This change in price has not become general, however, and some of the smaller companies state they cannot sell at $1.40 a barrel. The reduction was predicted in last week's issue of Hardware and Metal. There is no present likelihood of further reductions.

Representatives of the nine independent cement companies operating in Ontario met on Monday at Toronto and debated the situation which has arisen as a result of the lowering of the duty. The cement plants represented were the Crown Portland Cement Co., Wiarton; Ontario Cement Co., Brantford; National Cement Co., Durham; Hanover Cement Co., Hanover; Doric Portland Cement Co., Owen Sound; Imperial Cement Co., Owen Sound; Kirkfield Portland Cement Co., Kirkfield; Maple Leaf Portland Cement Co., Atwood, and Superior Portland Cement Co., Orangeville.

To See Government.

The advisability of closing down the plants was considered but it was finally decided to send a deputation to wait on the premier. "Unless relief is afforded us by limiting this order in council west of the great lakes we have no alternative but to close down our plants," was the gist of the resolution adopted.

The most unexpected development is noted in the following despatch;—

Winnipeg, June 18.—Several American cement concerns have notified Winnipeg people of a raise in prices saying they are no longer able to supply them on the old prices. Other firms in the West have received similar notifications, and the raise seems to save been made to very nearly correspond with the removal of the duty.

One local firm, which uses a considerable quantity of cement, said to-day that they wired five firms in the States for quotations and prices quoted in reply were in four cases greater than local quotations from Canadian concerns. The fifth was five cents a barrel less, but this was offset by the return of the sacks. Another local firm stated that, while it had enough for probably the entire season already contracted for, it had been notified that no further orders would be taken at the old price.

This may mean the continuance of the former price levels in the West.

Only in West.

A rumor has gained credence in the press that American cement will be marketed only in the West.

It is pretty generally believed that the eastern provinces will not see much importation of cement, even if conditions remain as at present.

Uncertainty Exists.

It is impossible to say at present what further developments are likely to crop out. Men closely in touch with the situation profess uncertainty. There seems to be a tendency to "mark time."

Problems of Price---1. Rise of Copper

Something About the Course of This Metal During the Past Twenty Years — Copper Has Been Advancing as the Result of the Enormous Increase in Consumption—What of the Future?

To trace in any proper way the price of copper is really to trace a part of the world's development. It necessitates showing the increased demand which has grown up for this metal, and the increased production which has come as a natural result of the increased demand. Production and demand are always closely associated, but in this case it becomes evident that they have not grown proportionately. Production has been the weaker brother, in the main. It is "demand" which has grown large and strong, while "production," though growing, has failed to make stride for stride.

Thus is found the present situation. Copper high in price—higher in price, indeed, than it has been since the bull market of 1907. Likely, moreover, to go higher.

The Cause of the Advance.

The cause of the increased demand is the general advancement of Canada and of other countries. Electrical plants — which have become so common in the past two decades, have used a great deal of copper. For wiring alone the consumption has been tremendous. Then copper is now largely used on roofs and eaves. Builders' hardware, which has made such improvement during the past few years, has meant the consumption of a great deal of copper; while the great favor which of late has been shown copper and brass household goods had meant a still further drain upon the supply.

Statistics show how great has been the growth of the demand, and how serious is the present situation. The American surplus has been reduced 15,450,386 pounds, and the European stock, during the year, has been reduced some 11,542,720 pounds. This leaves the present available stock at 149,559,963 pounds.

Small Compared to the Need.

The figures are of that size which compels the reader to ponder before he names them; but large though they are they yet seem small in comparison to what is needed. The present stock, indeed, has fallen far too near the danger mark, for it has been estimated that the reserve must total 100,000,000 pounds to make safe an annual turnover of 2,000,000,000.

That the reserve may shortly fall below this line seems very possible when the past is considered, for during the past twelve months there has been a drain upon existing supplies of 179,089,089 pounds. Let that rate of increased demand over production, continue, and not only will the increased supplies which are looked for this year be swallowed up, but a still larger hole will be eaten in the world's reserve.

> There has been a general advance in prices during the past ten years. Many things cost double now what they did a decade ago. What of hardware lines? Have they advanced in the same degree as other goods, and in direct ratio to the increase in the cost of raw material? Some say not.
>
> It will be interesting to compare hardware prices to-day with past figures and see what changes time has brought. The accompanying article is the first of a series bearing on problems of price.—Editor.

Fearful of Labor Trouble.

Everything at present, indeed seems to point toward a continuance of the present situation. The consumptive demand will continue greater than the supply, a condition which practically assures a still higher price for copper. The likelihood of this is increased by reason of the labor troubles which have already broken out in one refinery, and which are threatening the Butt district. Let this trouble spread and copper may go above even the high level of 1906 and 1907.

How serious is this possibility may be shown by a few prices of the past twenty years. In 1882, for instance, copper was selling in Montreal at approximately $23. But the high price brought a great increase in production, and in 1892 the price had dropped to about $14.38. In 1899 it rose to $21.50, again upon an increase in the demand more than equalling the increase in production. Then came the bull market of 1907, when the figures leaped to over $28. The advance was not altogether natural. It was partially the result of great speculation, but nevertheless the price stands as the highest of modern years, and as the price which some are predicting may be equalled ere long.

What Tables Show.

Another means of showing the cause of the present high prices, and of explaining the predictions that a still higher level may yet be attained, is by quoting the consumption of copper, and the production. Perhaps this may well be done in tabular form, as follows, the totals being secured by compounding the number of tons (2,240 lbs.) consumed in Europe and America during the year mentioned:

1902	565,210
1906	752,296
1910	886,301
1911	926,791

The figures, quoted in large tons, do not seem alarming. But notice what the world's supply has been of late.

1907	709,736
1909	836,870
1911	855,000

In short the consumption for the past quarter score years has been greater than the production. The reserves have been drawn upon quite largely.

Then what of the future?

For the Future What?

Here of course is a real problem, and many there are who wish they could peer into the crystal or read of the coming events in the stars. The situation, moreover, is rendered still more problematical by reason of the threatened labor trouble. It is more or less possible to count upon nature; but upon man—

However, even leaving aside all thought of a cessation in production caused by a strike or other labor difficulty, it is evident that the present situation is one of considerable seriousness. There seems little reason to expect any falling off in the demand. Rather will this increase. This being so prices will almost certainly continue on their upward course.

In this perhaps is the solution. Let the price go high enough, and the market will become so attractive that a greater effort will be made to reap a share of the profit which it offers. Production will thus be increased—for the supply is not entirely controlled—and the demand would be more easily met. The natural relief would thus have been found, and prices would fall.

But looking into the future is largely theorizing. All that is sure is the past. Records of this show the great advance which there has been in production, and the greater advance in consumption. This it was which forced up prices. Perhaps history will repeat itself. It often does.

EARLY CLOSING GAINING.

The early closing movement is gaining ground. This is rendered quite clear by the list of places in Ontario over 1,000 in population published in this issue.

The purpose of the compilation of this list was to secure the names of places where half holidays are held during the summer months. Much other information was secured incidentally, however, relating to the hours of closing which obtain throughout the year. It was learned that the tendency to close at 6 or 7 o'clock on all days but Saturdays is rapidly gaining ground. In some cases the early closing rule applies only to three evenings in the week but this shows that the idea is winning favor and extensions may be expected. A large percentage of the places on the list have fixed either a complete or partial early closing rule.

The statistics thus obtained lead to the belief that the time is not far distant when this practice will become universal. For the benefit of the trade, and the men in the trade, the time cannot come too soon.

TALK OF AMALGAMATION.

A story relating to lead is now going around. It refers to Mr. Guggenheim, the Copper king who went down with the Titanic. The tale is that Mr. Guggenheim had attended a conference of those connected with the various lead interests—a conference at which the advisability of forming a close union, which would enable a full control of the market, was discussed. It is said he had upon his person when the terrible glancing blow came, papers of great importance relating to the proposed union.

Quite possibly the main facts of this story are correct, for Mr. Guggenheim had large metal interests, and was known to be in Europe on business connected with these. Whether his death put a stop to negotiations, is not, however, known. It would appear, though, that some such amalgamation as was said to be the object of his visit to Europe was arranged. The present rapid rises make that seem likely.

Last week the advance of pig lead made another rise in white lead necessary. This week pig lead has continued on its upward way. What will be the end of it all? Nor is the high price the worst feature. The scarcity is even more distressing. This, however, will not be a long continued evil. The cessation of the London Dockers' strike makes the early shipment of the much needed supplies possible.

A CRISIS IN CEMENT.

It is stated that the cement industry has approached a crisis in Great Britain, Germany and the United States, due to the gigantic production. While the consumption has increased enormously, it has not yet overtaken the production. The situation in the United States is further complicated by the frenzied competition which has developed. There has been a most strenuous struggle for control of the market, and it is said that many American mills have been selling below cost. Certainly the price is low enough there to induce belief that the selling figure does not cover the cost of manufacture.

The total yearly production of cement in the United States is 80,000,000 barrels, and it is estimated that the over-production is 10,000,000 barrels. Canada's total is 6,000,000 barrels a year, or 4,000,000 less than the American surplus! It is on account of these figures that the Canadian producers are worried over the reduction in duty.

"LITTLE BUSINESS."

So much is heard nowadays about the importance and the iniquities of "big business" that one is inclined to lose sight of the fact that "little business' is after all the backbone of trade.

The operations of the thousands of retail dealers scattered through the country are of more vital importance than the manoeuvres of a few large corporations. The prosperity of a country is decided by the amount of business that is transacted over the counters of the retail store.

There is a common tendency to lose sight of the importance of small things and to regard only the big things. The newspapers at present are full of the Republican convention at Chicago to the exclusion of all mention of local happenings of more vital, if less spectacular, interest. This tendency is noticed in the conduct of many hardware stores. Many salesmen, and proprietors also, are prone to centre their interest solely in the sale of goods which involve a large amount. They are inclined to "look down" on transactions in the cheaper goods. They are interested in the sale of stoves, refrigerators, vacuum cleaners, rifles, the best grades of cutlery, in fact in the most expensive lines, and do not condescend to take an interest in the humbler lines which, after all, constitute the bulk of the stock.

As pointed out elsewhere in this issue, the "little business" is of equal importance, and no salesman can count himself finished or capable until he recognizes this fact.

A small profit repeated often will soon become a big profit.

LOCAL PARCEL POST SYSTEM.

At the convention of the Ontario Postmasters' Association, held in Toronto during the week, a subject of much interest to the retail trade in country towns was discussed. It was in relation to the parcels post problem; in fact, an endorsation was made of what might be termed a mild form of parcels post.

The association went on record as favoring a local parcel post service in connection with the rural delivery system to give tradesmen and merchants the facility of having their parcels delivered through the post offices along the rural routes at the rate of one cent per pound, with a minimum charge of five cents. The regular parcel post coming through the mails from outside points would not come under these rates.

Such a system would naturally benefit postmasters, and local merchants in districts where rural mail delivery is in effect. Postmasters would sell more stamps and merchants would be able to fill phone orders from the country by sending the goods through the post office. During the summer months when farmers are busy on the land, such a service might be used to good advantage. Five pounds of goods—providing heavy articles were omitted—or dry goods could be sent for five cents, which would be much cheaper than hitching up a horse and driving into town.

On the surface this appears to be a good scheme, as long as it would not evolve into a general system of parcel post coming through outside mails. Merchants would, of course, have to add to their selling price the amount of postage, else there would be a considerable leak in their business in a year, if much goods were sent by post.

No longer need the traveler kick his heels for a whole afternoon around the empty streets of a town which has "closed up" for the afternoon. By consulting Hardware and Metal he can plan out his route to dodge the half-holiday.

THE MARKET SITUATION

THE market situation as regards practically all branches of the hardware business is vitally interesting at the present moment. If the hardwareman still holds to the old trade adage that "goods well bought are half sold," he must recognize that the market demands his closest attention, for it is only through concentrated study that good buying is made possible.

There is an upward trend in nearly all lines. Metals are scarce and high. As consumption is outstripping supply, it seems practically assured that an era of high prices in metals has begun. It follows that hardware goods are going to cost more in the making than previously. This may or may not presage higher prices in future for some lines of hardware but the possibility is there. It is worth watching.

As a direct result of the "aerial performance" which the price of copper has been giving, the cost of brass and copper goods has been advanced. Other advances may come. There is some talk of all lines of builders' hardware containing brass, being advanced. Although rumors on that score have been of the vaguest, the suggestion is worth consideration. Some lines of cutlery are also going up.

Turning to the paint and oil department; developments of still deeper significance are found. White lead has been going up by leaps and bounds and no prophet has been found rash enough to predict that the end has been reached. White lead may—some say, will— go to $8.00 per cwt. before high water mark is touched. Linseed oil is very firm and there have been a number of advances recorded recently. Putty has advanced. Glass may stiffen up if the threatened trouble in Belgium develops. Finally, there are persistent rumors that prepared paint will be advanced. Despite denials and postponements of action, this rumor, like Banquo's Ghost, will not "down." It bobs up on every hand and has been particularly in evidence since the last advance in white lead.

Montreal, June 6—Great interest is given the market this week by the further advance of white lead. It is only three weeks since there was an advance before, and this further increase of 15 cents has given strength to the declaration that first 7½ and then 8c lead will come.

The talk is already of the possibilities of still another advance, and it is thought locally that the new price will not stand long. The latest development is a reported scarcity of pig lead, which will certainly tend to keep the price up.

ADVANCE IN WHITE LEAD.
(Special to Hardware and Metal)
Montreal, June 14—White lead advanced here to-day 25 cents per hundred pounds.

All of which goes to show that the hardwareman, who wants to buy right, has to keep his eyes open. He must not only note all price changes but endeavor to inform himself well ahead of time of probable developments.

There is one sure and easy way to do this. Read Hardware and Metal. This paper keeps closely in touch with conditions and gives weekly forecasts which are invariably worth a great deal to the dealer. Few changes in price are made which have not been predicted in advance in our market columns. The accompanying illustration, made up of clippings from the June 8 and 15 issues, is a tangible evidence of the way in which Hardware and Metal gives advance information of a distinct value to the retailer. It is but one case in many.

"Little Business" and the Hardwareman

Much is Heard Nowadays of "Big Business," But the Hardware Dealer Should Be Interested in the Smaller Phases of Trade—Profits are Made in Small Lines —Methods Pursued by Certain Dealers Show Wisdom of Featuring Small Articles.

To paraphrase a rather well known saying, "great profits from little purchases spring." Fortunes have been made selling newspapers on street corners, where the profit is just one-half cent on every sale. It is said of a certain millionaire of Hebrew descent that he laid the foundation of his present great wealth picking paper off the streets.

Much is heard nowadays of "big business." Certainly great fortunes are made by the operations which are classed as "big business"—mergers, stock issues, and corporation promotions. Politicians, public speakers and magazine writers have united to assail "big business," but they picture the possibilities and paint the profits in such lurid lights that they have succeeded chiefly in stirring up a sort of admiration for such operations and, in a great many men at least, an insatiable desire to participate. The feeling stirred up by the discussion of "big business" has not been exactly a healthy one and it is time that something was said about "little business."

There are royal roads to wealth but they are closed to all but a very few. The financial genius and the rogue can find short cuts to the acquirement of cash but the average man must plod along slowly and painfully. The accumulation of money is a matter of continuous small operations rather than of a few bold strokes. "Little business" is the long and crowded highway which the great majority of men must follow if they would arrive at the desired destination which is known as financial independence.

This broad truth will be found to apply to the management of a retail busines. It is the steady, every-day-in-the-year trade which makes a business profitable. Some dealers, and a great many salesmen, rather despise the small articles in the store. They want to make big sales and do not bother themselves to push the sales of the numerous little lines carried which yield a small margin of profit. "I can only show my ability as a salesman when it comes to stoves, washing machines and goods which sell at a big figure," once confessed a hardware clerk. "I can't work up enthusiasm or interest in selling nails or saucepans."

This clerk is one of a large species. In nearly every store it is possible to find men of the same stamp. Some of them have rare salesmanship ability but it is doubtful if they will ever climb above the ranks of mediocrity. They are working in the wrong direction.

The stock carried in the hardware store is so large and varied that, to insure success, the dealer must have a large turnover. He has hundreds of different lines to push and it follows that he must devote his attention to the small lines as well as to the higher priced goods.

Five, Ten and Fifteen.

The success of the 5, 10 and 15 cent stores is conclusive proof of the possibilities of "little business." A good many hardwaremen have recognized the fact that profit lies in the small lines and are featuring the goods which sell at small prices. A counter devoted to goods which range in price from 5 cents to 25 has become a regular feature in many of the best stores.

The accompanying illustration shows the interior of the store of J. G. Humphreys at Griswold. Mr .Humphreys is a believer in the wisdom of featuring the small lines as well as the high-priced. He keeps a table well toward the front of the store which is used entirely for the display of articles which sell at a small price— egg beaters, strainers, mouse traps and so on. Customers who enter the store cannot help but see the collection. They glance it over; it is human nature to look over any kind of a collection. If they see an article which they need, they buy it. If the article in question had not been where they could see it, they would never have thought to ask for it.

A Creditable Interior.

In passing it may be noted that the illustration shows the Humphreys hardware store to be a creditable one in many salient respects. The stock is well and neatly arranged. The store is not crowded and the interior is both light and attractive, a result which can be partly attributed to the fact that the metal ceiling is practically free from all obstruction. The presence of glass showcases makes the display of cutlery, silverware, clocks and jewelry particularly effective.

Secured Results.

The experience of another firm might be quoted also in this connection. J. Moxon & Son, of Picton, have a counter for smallware which has brought splendid results. The top of the counter is divided off into sections and the partitions are so arranged that they can be moved to suit the goods shown. The articles shown in each section are always of the same price, a ticket above announcing what that price is. The articles run from a few cents upward but are never high priced. They are for the most part small kitchen utensils.

This method of display has brought large sales. The articles sell themselves. While people are waiting for their change or for a parcel to be wrapped up, they look around the store. This counter catches their eye and they glance over the collection. It is seldom indeed that they fail to see some one thing they

(Continued on page 35)

A counter in the hardware store of J. G. Humphreys, devoted to small articles—It has resulted in large sales on an automatic basis.

The Problem of Cost Distribution

Should an Average Percentage be Struck to Cover Overhead Expenses and Applied on all Lines?—Or Should Each Department, or Line, be Assessed According to the Expense Entailed—One Dealer's Views.

It is generally accepted that the way to provide for "overhead expenses" is to figure what percentage of the total turnover is represented by the cost of doing business and reckon that percentage in when fixing the selling price of goods. This method is followed by practically all hardwaremen, and it is found to work well when properly carried out.

There are some dealers who contend, however, that it is not advisable to fix a definite percentage to apply to all articles in the store. They believe that different percentages should be charged on the price of different lines. A group of three or four hardwaremen were discussing this question at a recent convention, and one of them gave his views as follows: "It is not wise to charge the same percentage all around because expenses vary so widely in different departments. For instance, why should nails which occupy a bin in an obscure corner be charged as high a percentage as the cutlery, which is shown at the front of the store in an expensive silent salesman? Some lines require much more handling than others, and you generally find that these lines can be sold at a better profit than other goods. To put the same percentage on these lines as on the less frequently handled goods is to cut down your legitimate profit on the one and to restrict the sales on the other because the percentage will be too high. On this matter I take the same stand as the 'adequate protectionist' on the tariff. I believe in fixing the percentage to suit the circumstances."

The writer had a chat with this hardwareman later, when he explained his idea more fully.

"Expenses vary largely on different lines," he said. "It costs me considerably more to handle some goods than it does others. To charge the same average rate all around, therefore, is to mark some goods too high and others too low. It is unfair both ways.

"It is self evident that goods placed toward the front of the store sell more rapidly than the stock at the rear. The farther back in the store you go, the less valuable the space. Is it not logical to state that the dealer who pays rent in proportion to the value that the store is to him, is paying more rent on the front than on the back? In view of the fact that the dealer must depend upon the selling of the goods at the front to provide the bulk of his revenue, he should make that stock carry the bulk of the expense. In my opinion, the cost of doing business should be apportioned in much the same way as rent in a big building. The tenant on the first floor pays the biggest rent, and so on up. Personally, I put as much as 25 per cent. on some goods which I feature prominently at the front of the store and on some of the slow-selling, seldom-handled lines which are kept at the back, or in the storeroom, I only put 10 per cent.

"For instance, I have two glass show cases which I keep at the front of the store and which are used for the display of cutlery, knives, silverware, brass goods and clocks. They cost me quite a neat sum. That money must be paid back into the business, but I don't believe in assessing a share of the cost against every article in the store. I am figuring a higher percentage on the goods which are shown in the cases, and in time that will cover the initial expense.

"Again, I send out a man during the active building months to canvass the builders for builders' hardware, cement, roofing and so on. He puts his whole time to the work. Should his salary be counted in with the general expenses and thus charged on all goods sold? Not to my mind. His expenses must be covered in that one department.

"I have never worked out a complete system for the distribution of costs, but I recognize that I should. Some day soon I intend to. In my opinion the stock should be divided into distinct departments, such as builders' hardware, tools, kitchenware, sporting goods, cutlery and silverware, paint, stoves, heavy hardware and so on. Sales should be classified so that the dealer would know what his turnover is in each department. Then the expenses should be divided up and each department given a certain share. For instance, the rent should be divided up according to the position occupied by each department in the store. Salaries should be divided according to the amount of handling that the various lines demand. A certain rental fee should be charged for the use of the store windows, and the advertising expenses should be charged against the articles advertised. In this way all expenses would be provided for, and each department would be assessed at its proper share. Thus, a correct percentage to cover the overhead expense could be struck for each department, and the selling price fixed accordingly."

There are, of course, grave difficulties in the way of carrying out this plan. That it would be the proper way to do business practically all will be ready to admit. It would, however, necessitate a more intricate system of bookkeeping than is followed in most stores. It would entail considerable more figuring, and the aim of most merchants is to simplify rather than to complicate. On that ground, a great many dealers would prefer to leave matters on the old basis.

Another objection is that few hardwaremen have departmentalized their store. The goods are arranged in a promiscuous manner in a great many stores, and to endeavor to distribute costs would be a task which would not only be impossible, but almost ludicrous. In such cases, the only feasible method is to fix an average percentage to apply on all goods.

Have Definite Figures.

One great advantage, however, would be in the definite information which the dealer would have were he to follow the system outlined. He would know just exactly what each department, or each line, was costing him, and what it was paying. If his profits fell off, he would be able to trace the leak.

Under the conditions which prevail in most stores, the dealer is aware only of the total results of his business. He knows that he is making or losing money, but he is not in a position to judge the value of any one department.

Finally, it may be stated that the big departmental stores have a most elaborate system for the distribution of costs. Each department pays so much rent and bears a certain share of the cost of maintenance.

Why should not the same idea be followed out in the smaller retail store?

"LITTLE BUSINESS" AND THE HARDWAREMAN.

(Continued from page 34)

need. The sales are heavy and continuous; and they are, for the most part, automatic.

The margin on the sale of small goods is slim. The volume of business is large, however, and a small margin multiplied often becomes a large margin.

In the opinion of the writer it will certainly pay the hardwareman to take steps to push the sale of the almost endless variety of small articles which he carries in stock. "Little business" is profitable.

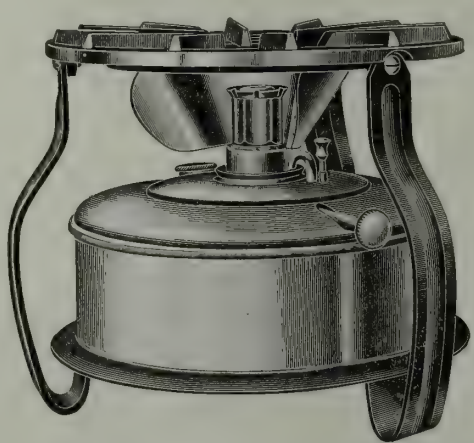
A display of electrical specialties in a hardware store, which brought splendid results.

Electrical Cooking Appliances in Favor

This Class of Goods Offers Fine Opportunity to the Retailers—The Present a Season When the Electrical Irons are Especially in Demand—Chafing Dishes, Toasters, Heaters, and Even Full-Sized Cookers are to be Had—The Question of Current Cost.

Shakespeare, who in his day gave much valuable information which the people of his day were not wise enough to take, remarked upon one occasion that "there is a tide in the affairs of men, which, taken at the flood leads on to fortune." This statement, like hundreds of others of the great playwright, is as true now as in Good Queen Bess's day. It also applies to hardware salesmanship as well as to a multitude of other activities of men.

This being a slangy and jocular generation men no longer remark that one of their fellows who has achieved success, "took the tide at the flood." They rather say he "got in right;" but the meaning is the same. They mean that the man was "Johnny on the spot." That he "knew a good thing when he saw it." That he "got in on the ground floor," and "seeing a good thing he pushed it along."



A Wide Field Open.

It is this "getting in right" which means as much to the hardware dealer. A multitude of new lines are being bronght out yearly. Some are of little use. More are invaluable to some and unvaluable to others. Still others are of general use, and might well be taken up by all dealers. It is hardly correct to state that electrical goods belong to this latter class; yet they do meet a need of a great mass of people, and therefore might well be handled by a large number of hardwaremen—as indeed they are now being handled.

The field for electrical goods is widening monthly. What Adam Beck of Ontario has named the "white coal" is becoming more and more generally used. Water power is being used to generate electricity in many places where electricity was recently almost unknown. And the advance has only started. The next few years, indications seem to show, will see an even greater step forward than the past.

Advantages of Anticipating.

Here is where the dealer may take the tide at the flood. He must not only consider the goods for which he will find a strong demand now, but must consider these goods for which a demand is growing. If he anticipates this demand a little he will benefit. He will hurry its coming for one thing, and it will be to him that the people will go to make their purchases.

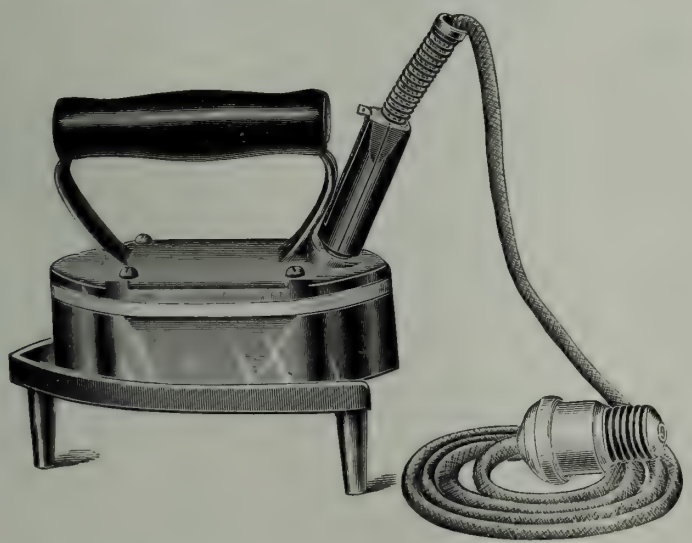
Spirit lamps upon which water may quickly be heated are also popular now.

Until recently there has been a feeling that electrical goods were something for the rich—a luxury out of the question for those who need to count the dollars, if not the pennies. But of late there has been a change. It is not the rich, but the moderately well to do who have been buying. Young couples, for instance, have bought largely of electrical goods.

That this should be so is not surprising. This is an age of flats and apartments, as far as the cities are concerned. Large stoves are not the thing for an apartment. Gas stoves are generally used, but occasionally in place of these—though more often as supplements—electrical equipments are installed. This means quick and easy labor, such as is desired by many young housewives.

Irons Exert Strong Appeal.

A great number of places now have continuous electric currents. Therefore there is nothing to block the sale of electrical goods. But even in the places where the current starts at dusk and discontinues in the morning, there is a chance to sell electrical goods. Irons, for instance—one of the most popular lines—will appeal to women in any community which has an electrical service. If the current is continuous, so much the better. But if it is only on at night, then the women will arrange to do their ironing then.



This is possibly the best season to sell electrical irons. For two reasons. These irons mean a great conservation of energy, for they do not heat the room

in which they are being used to any perceptible degree. They do not necessitate the burning of wood, coal or gas. Moreover, this is a season when muslin, lawn and print dresses are being worn. These require frequent pressing, therefore the iron is in great demand.

Meeting Objection of Expense.

"I only have one difficulty in selling electrical irons," remarked one hardwareman. "The people think these greatly increase the electricity bill. I have done something to overcome this objection by making a frank statement of the electricity consumed, and by showing how the current may be husbanded."

Notice what this dealer is able to say about the current. A five-pound flatiron uses—it has been estimated—one third unit an hour. In Winnipeg, where competition between a municipal plant and a power company has brought the price of electricity remarkably low, this means that the cost per hour of running the iron would be one-third cent. In Montreal, where with discount the rate is about 7c per unit, the cost of operation would be two and a third cents. With the size of the iron and the rate charged the cost would vary; but nowhere would it be prohibitive.

Electrical irons are especially appealing to women in the hot weather when many print and muslin dresses demand pressing.

Switch Current On and Off.

Here is the other point which this hardware man has brought out to his customers. An iron, once heated, will retain its heat for some little time. This, any woman will immediately understand, for has she not been accustomed to take an iron from the stove and use it for five, ten or fifteen minutes before changing to a freshly heated iron? But, she will wonder, what has this to do with an electric iron? As the dealer points out, though, it has just this importance. It means to the electric bill what the coaster brake means to the cyclist. It means a hot iron for an hour, for an electricity current of a third that time. The iron once well heated the current may be turned off for ten or fifteen minutes. Then it may be switched on again for a few minutes, until the heat is once more brought up to the proper intensity. Then once more the current may be switched off.

But electric irons, while among the best selling articles at this season, are but one of the many lines which find a ready market. The electrical toaster is another. In the two days before Christmas, last year, over four hundred of these were sold in Winnipeg. Of course, as has been said, there is a special inducement for people to buy these electrical goods in the Manitoba capital; but elsewhere, too, electrical toasters have sold well—and will not only continue to sell well, but will sell better. A toaster is an ornament on the table. With it toast may be made as wanted, and there will always be fresh toast to be had with the coffee. Nor will there be toast left over to come back like a recurring decimal in a bread pudding.

A Boon to the Shaver.

Then there are water heaters — of great value to the shaver, who by the use of one of these may have hot water in the bathroom at a season when the hot water supply upstairs is cut off in so many houses.

There are chafing dishes, urns, electrical jugs and high temperature plates. Then there are electrical heaters which fill a very real need in a wet, chilly season like this. Their use for a few minutes will take the chill from the air, and the expense will not be great.

Then as one of the latest steps comes the cooker—an electrical stove capable of preparing a whole course dinner. More and more this is finding favor. Again the cost of operation will be urged in opposition, but with the present charges operation is not excessive. With every part going this could be run in Winnipeg for eight cents an hour—and who wants to run a stove full blast for that length of time? It is only at Thanksgiving, Christmas or such gastronomic festivals that such a lavish use of the stove need be made.

Spirit Lamps Also Valuable.

There is another class of goods meeting much the need that is met by the electrical appliances. It is the spirit lamp, with all its diversifications. This has one advantage over the electrical appliances. It can be used even in those places where electricity is not supplied, or where power is exceedingly expensive. There are coffee percolators and miniature stoves. Quite a wide variety of lines. Then there are gasoline irons which fill some such need as do the electrical models. Truly the hardwareman who serves a country community, which has not yet been blessed by the coming of electricity, need not be idle. He has a wide field before him.

CATALOGUES

Hardware Service.

The Edward C. Plume Co., Chicago, have issued their 1912 book on hardware advertising service, the object of which is to promote intensive retailing. The book contains seventy illustrated advertisements, dealing with all branches of the hardware business. The ads. are cleverly arranged and forcefully written.

Steel Valves.

The Nelson Valve Co. have issued a catalogue on steel valves and fittings. It is interestingly descriptive, giving particulars of the process of manufacture and showing views of the works. Each part is fully described. The line shown includes every variety of valve and fitting.

Enterprise Enamel.

The Enterprise Enamel Co., Bellaire, Ohio, have issued a catalogue which is unique in the number of colored illustrations shown. It has half a dozen pages filled with three-color cuts, and is most striking on that account. A complete description of the lines of enamelware made by the company are shown, with suitable illustrations.

Electric Fixtures.

The Canadian General Electric Co., Toronto, have issued section 10 of the section edition of their catalogue on electric fixtures and shades. It contains a most handsome assortment of goods of all finishes, styles and values.

Can Canadian Hardwaremen Learn From the French ?

George Caverhill Points Out Some Particulars in Which the Dealers of the French Towns and Cities Have Attained Great Proficiency — They Know Their Goods Thoroughly, and Through This Intimate Knowledge Secure Many Sales—They Have Small Stocks But Buy Often, Thus Doing a Large Business With a Small Capital.

In America there is a tendency to scoff at what is called the slow business methods of the Continent. It is refreshing, therefore, to catch a glimpse of the practices of the older nations from a new angle. George Caverhill, of Montreal, who has just returned from the continent, supplies the new view point. He went to France with eyes and mind open, and came back greatly impressed, and full of the belief that Canadian hardwaremen—as well as other Canadian business men—would do well to consider the methods adopted in the cities and towns there.

In his recent trip Mr. Caverhill visited not only Paris but a number of the other towns and cities of France. He was not on business bent, and so had little opportunity for judging the methods of the wholesalers. But he did call upon a large number of retail hardware stores, in Lyons, Avignon, Bordeaux, Orleans and other places designated as provincial by the supercilious Parisians.

Key to Contentment and Wealth.

"You expect courtesy and attention in a Paris store," remarked Mr. Caverhill, "but in these places I was greatly impressed with the attention given to all customers, and with the thorough knowledge of their goods which the clerks displayed. This, I think, is the key note to the contentedness of the employes and the general wealth of France.

"The attention the clerks give is hard for us to realize. It is impossible to go into a store and come out without buying—at least I found it so. There is always something to learn from clerks and retailers alike. They have made a study of their business and can throw some new light upon it. It is this careful study which I sometimes think is lacking here. Often clerks, and at times even heads of departments and store owners, are inclined to be superficial."

Are Rapid Buyers.

Another thing in the French hardware stores which impressed Mr. Caverhill was along the important line of stock turn-overs. "There," he remarked," many of the merchants seem to keep a remarkably small stock on hand, but they watch this carefully and have such connections that they can secure fresh supplies exceedingly rapidly. With this system of quick buying they are enabled to do a remarkably large business with a remarkably small capital."

One other feature of which Mr. Caverhill speaks is the assistance which French wives give their husbands. This is not confined to the home, but the wives, and the daughters, go into the store. "In many cases," declared Mr. Caverhill, "they seem to run the selling part of the business. The dealer, himself, is seldom seen, occupying himself with buying and with looking after deliveries."

There may be various opinions as to the desirability or undesirability of such a system of co-operation. But there can be little said against the other practices of the French hardwaremen. From seeing their stores and their way of doing things many Canadian dealers could get valuable pointers. But it is impossible for many to make the trip across the pond. Still there are what Stevenson calls "Fire Side Travelers" — those who at home read what others have seen. These get much of the benefit and the pleasure without the fatigue which the travelers are called upon to endure. So reading what Mr. Caverhill has to say about the methods of the French, many will be able to judge where their system is superior to that of the French dealers. They will be able to consider the question of thoroughness, and to judge if Canadians are really lacking in this respect. A period of self-examination is often of great value, and by no means can this better be done than by comparison.

The following items are taken from the issue of June 25, 1892:—

"The sale of oil stoves shows an increase this summer, notwithstanding that gas stoves are supplanting them so rapidly in the cities. The oil stoves are finding new fields to conquer in the towns and villages as well as in the country places."

Editor's Note.—Despite the fact that gas stoves have been selling in ever increasing volume, the oil stove still has a big sale. The demand, in fact, has grown in proportion to the growth in other lines. It is seldom that the introduction of a new article results in the complete supplanting of old ones. The new article makes a market for itself. For instance, the automobile is taking the place of the horse for pleasure purposes, for delivery and dray work and even on the farm. And yet horses are more in demand now than ever before.

* * *

"The 'bull' movement in pig tin has received a serious setback. In point of fact, the clique seems to have withdrawn all the props with which they have supported the market latterly and even rendered some assistance to 'bear' operations.

Editor's Note.—The situation in tin does not seem to have changed much during the twenty years which have elapsed. The market is still controlled by a ring but they call it a syndicate now and not a "clique." It is also customary for the syndicate to let go control occasionally and to lure the bears on.

* * *

"W. G. Scott, of W. G. Scott & Co., Mount Forest, while in the city on Saturday, did not forget to visit Hardware and Metal. He has been one of the steady subscribers since the paper began."

Editor's Note.—Mr. Scott has for a number of years been out of the retail hardware business. He is now manager of the Pease Heating Co., Toronto. Previous to leaving the retail ranks, Mr. Scott became an active member of the Ontario Retail Hardware and Stove Dealers' Association, serving as president of that body.

* * *

"Pilkington Bros. of St. Helen's Lancashire, England, glass manufacturers, will carry on business in Montreal."

Editor's Note.—Pilkington Bros. have extended their operations in Canada and have branches now in other cities.

* * *

"Auld & Woodyatt, manufacturers of lawn mowers and general hardware, Guelph, Ont., have dissolved, A. R. Woodyatt continuing."

Editor's Note.—The business was ultimately incorporated into the Taylor-Forbes Co., who are now operating their large plant on the site of the Auld and Woodyatt foundry.

Current News of Hardware Trade

Death of Plumber.

The death occurred at Vancouver, of R. F. Scott, plumber.

Annual Maritime Convention.

The annual convention of the Maritime Board of Trade will commence at Truro, N. S., on Wednesday, August 21.

Make Start on Store.

Parry Sound.—The Wm. Beatty Co., Limited, have commenced the erection of a new store. It will be built of brick, two storeys high and have a frontage on James Street of 45 feet.

To Make Tools.

Guelph, Ont. — A factory is to be started here to manufacture tools and machinery. A by-law will be submitted to the people to loan $5,000 for ten years.

Tc Make Woodenware.

Palmerston, Ont.—Taylor, Scott & Co., are moving their factory here. They make woodenware , such as children's sleighs, wagons, washboards, etc. They expect to employ 50 hands.

Get an Increase.

Kingston, Ont.—The Kingston tinsmiths have asked for an increase in wages. They seek an eight-hour day, and $2.75, instead of $2.55. The increase will be granted beginning July 1.

A New Industry.

Lacombe, Man.—A tool and metal work factory will be opened here before the fall. The promoters have given a guarantee that the plant will be in operation in six months' time, with a staff of at least 50 men.

Must Pay License.

Taber, Sask.—The town council have framed a by-law to fix business licenses. All mercantile businesses carrying a stock of over $1,000 will be licensed at $50 per year. All with smaller stocks will pay $25.

May Get Factory.

The Fort William Industrial Bureau which for some time past have been negotiating with Mr. Black, manager of the Great West Wire Fence Co,. Winnipeg, have received some assurance of the company's location in that city.

Steel Lodged in Hand.

James Gorman, employed with R. Chestnutt & Sons. Fredericton, met with a painful accident this week when a piece of steel lodged in his hand while he was working about the store. An operation was necessary before it was removed, and the x-ray had to be used.

Back from England.

Toronto, Ont.—G. T. Pepall, of M. & L. Samuel, Benjamin &Co. has returned from a two months' trip to Europe. He spent most of his time in England, but also visited Paris. Mr. Samuel, the resident member of the firm, has now left for a European trip.

Move to New Store.

Treburn, Man.—John Harvie & Co. have moved their hardware store from Broadway to their new quarters on Railway Avenue. They have a store of considerably larger capacity now than formerly, and in addition to the hardware line they are putting in groceries and boots and shores.

New Cochrane Co. Store.

North Bay, June 12.—The Cochrane Hardware Co. have moved from their old quarters on Main street into the massive new building which has been erected further up the street by the concern. The new store has been fitted up with all the appointments of a metropolitan store, the show cases and fixtures being handsome and thoroughly modern. The new quarters of the concern give spacious floor accommodations on the ground floor for the display of augmented lines of goods, and ample accommodations for storing goods in the floors above.

To Erect Warehouse.

Saskatoon.—F. W. Adams, of Adams Bros. Saddlery Co., announced here yesterday that his firm would erect a new branch warehouse in Saskatoon, in competition with the Great West Saddlery firm, who are now nearly finished with their new $75,000 warehouse in this city. Mr. Adams stated that it might be a short time before building operations would be actually commenced; but that in the meantime they had arranged with another wholesale house to rent from them eight thousand square feet of floor space.

Owing to the wonderful development since his commencement in business here two years ago, A. H. Westhaver has taken advantage of the removal into their new building of the J. F. Cairn's department store, to obtain a lease on their present building. This is located in the best section of the city, and should allow for an excellent display of hardware and stoves.

Business Changes.

Saskatoon.—R. G. Band and A. D. O'Brien have secured an interest in the Morton Hardware Co., and will hereafter have the management of the same. R. G. Band was formerly with the Winnipeg Paint and Glass Co., and A. D. O'Brien was with the Martin-Senour Co.

Coutts, Alta.—H. Tennant, hardware dealer, has discontinued business.

Teulon, Man.—F. C. Green, hardware dealer, has been succeeded by James Graham.

Wawanesa, Man.—W. S. Peters has bought out the hardware business of Couling & Co.

Rapid City, Man.—R. Foerester is discountinuing his hardware business.

Vancouver, B. C.—The Bailey Hardware Co. are reported to be selling out.

New Retail Stores.

Pelly, Sask. — Chas. D. Hubert has started in the tinsmithing business here.

Saskatoon. — The Central Sanitary and Heating Co. are starting in business.

Moose Jaw.—The Moose Jaw Heating and Plumbing Co. have been incorporated.

Personal Notes.

St. John.—Geo. McAvity and W. H. Thorne have left for Bonaventure, P.Q., to spend a few days' holidays at the Bonaventure Salmon Club.

Hardware Letter Box

Peerless Water Service Systems.

Schaefer Bros., Simcoe, Ont.—"Kindly let us know who makes the Peerless Compressed Air Water Service Systems."

National Equipment Co., Toronto.

Muriatic Acid.

A. R. Dundas, Cobourg, Ont. — "Kindly advise me where I can procure muriatic acid (in carboys) as used by tinsmiths for soldering purposes."

Lyman Bros., Toronto; National Drug & Chemical Co., Toronto, or any wholesale druggist.

Verandah Hammock Beds.

M. Weichel & Son, Elmira, Ont. — "Kindly give us names of manufacturers of verandah hammock beds."

Hohlfeld Mfg. Co., Philadelphia, Pa.; I. E. Palmer Co., Middletown, Conn.; Ideal Bedding Co., Toronto.

Water Heaters.

S. Schwartz, Rocanville, Sask. — "Kindly give me names of manufacturers of water heaters."

Jas. Morrison Brass Mfg. Co., Ltd., Toronto; Ideal Manufacturing Co., Windsor, Ont.; Lawson Manufacturing Co., Homestead, Pa.

Weekly Market Report --- Metals

METAL NOTES.

Lead is reported to be very scarce. Some firms are "cleaned out" absolutely.

Copper advances one half cent. Demand is heavy.

Lead bars and sheets have advanced in price.

Trading is extremely brisk in all lines.

MONTREAL.

Montreal, June 21.—Still metals are going up locally. Nor is the shortage of supplies in some lines, which has been felt in Montreal, the only reason for the rise. There is a general upward trend of the market, and there could not be other than an advance here.

Tin still claims a fair share of attention, promising to soar again, though for a day or two it has shown small decline on the primary market. Copper, however, is more in the limelight. It continues to advance—some say simply because of the excess of orderings over the supply; others contend that manipulation has more to do with the rise. Still others there are who state that manipulators first started copper on its upward way, but that it now has attained such an impetus that these manipulators are powerless to stop its progress.

Copper Up Half a Cent.

Locally copper has been advanced half a cent—a rise which has been predicted for two or three weeks. Nothing else could be expected in view of existing circumstances.

Lead too has fulfilled predictions and has risen in price. There is a little variety, according to the product, but the general advance is ¼ cent a pound.

Still the volume of business being done is good, and the difficulty is to secure the stock. While the labor troubles in England seem to be quieting down much harm has already been done, and the Canadian handlers suffer with the others. The scarcity of lead, and the threatened scarcity of tin are partially due to this cause.

Advances in Lead.

Lead.—Conditions are much as reported last week. Still the shortage is the great difficulty, though it is largely upon the market rise that the following advances have been made. Bar pig, $5.50, a rise of 30 cents. Sheets, $5.75, an advance of 25 cents. Sheets, 3 to 6, $5.50, an advance of 25 cents.

Spelter.—The scarcity of the early spring has completely passed, but still a good price is set upon the metal.

Tin.—The slight decline which has been noted on the primary market of late is not thought to presage any continued drop. Rather is there a belief that this is just a temporary fall which will be followed by another rise. Certain it is that there is little metal for June delivery.

Locally stocks are none too good. There is enough to meet the immediate need, but the handlers must replenish their stocks, and if anything interferes with this there will result as tight a situation as is now being felt with lead.

Copper, Too, Rises.

Copper.—The ingot metal has been raised locally, now selling in fair sized lots at $19, a jump during the week of 50 cents. The general upward movement of the market has rendered this advance absolutely necessary. Stocks locally are fair, and the ordering, despite the high price, good.

There is considerable speculation as to the cause of the continued advance on the primary market—which is said by some to be greater than the natural causes warrant. Some predict a decline, saying that men who are selling short are now booming the market to get a good price, and will later work to cause a decline which will enable them to take a good profit.

Among close students there is little confidence in this theory, the general belief seeming to be that copper will go still higher rather than fall in price.

Iron.—The metal while more plentiful than it was a month or two ago, is not too abundant yet. From present appearances it will be midsummer before the handlers will have as much as they desire.

TORONTO.

Toronto, June 20.—The feature of the metal market here is the scarcity in lead. There is practically none in sight and this in the face of an insistent demand. It is impossible to say when relief will come, for there is little pig lead in sight, and the market seems to have resigned itself to a shortage for some time at least.

Generally speaking, business has been very active. The consumption of all metals is growing apace. "We are on the eve of a record expansion," said one man to-day. "Everything points that way." The only trouble that the metal houses are experiencing is to secure supplies.

Firm and Active.

Tin.—There is as great a demand for tin as at any time this year, and the price remains firm at 50 cents. This price seems to be accepted as likely to be permanent for some time; at least, in the face of the demand, no reduction is anticipated.

Advance in Copper.

Copper.—Another half cent advance has been recorded in copper. The consumption of this metal continues heavy and the utmost confidence is expressed here that it will continue strong. Although some contend that the high price of copper is due partly to manipulation, the general opinion is that the excess of consumption over production justifies the advance in price. Some are predicting 20 cent copper. While not many subscribe to this, the prediction indicates the trend of the market.

No Lead in Sight.

Lead.—"We haven't a pig of lead in the place," was the report received from one firm to-day. The scarcity in lead is very real at the present moment. Buyers are skirmishing around looking for supplies, but are not meeting with much success.

Under the circumstances, little business has been done here in lead.

Spelter.—This is the exception to the general rule. Spelter is dull. There is very little interest at the present moment, and little buying is being done. The price is not showing signs of advancing; and supplies are fairly ample. In all of which respects, spelter differs from the other metals.

Plates and Sheets.—Business is reported to be very good. Supplies are ample at present, and, despite the almost continuous series of labor troubles in the old country, new stocks are coming forward with commendable regularity.

Pig Iron.—There is a heavy demand, prices remaining firm.

WINNIPEG.

Winnipeg, June 17.—The business in all lines of sheet metal is seriously handicapped by the shortage of supplies and it is reported that several firms manufacturing this line have had to lay off hands, not for the want of plenty to do, but from inability to get plate to keep their hands and plant going. The situation is undoubtedly the direct outcome of the late unfortunate labor troubles in Britain.

Prices in iron pipe have been readjusted both for black and galvanized lines, and in most cases there has been a reduction. Lead and lead waste are 30 cents per cwt. dearer than two weeks ago, and pig lead is quoted at $6.25 in small lots, $6 ton lots.

There is no falling off in the demand for metallic supplies used in building and construction work and the daily announcement of permits for large buildings of steel, frame and reinforced concrete construction indicates a first-rate business outlook.

Weekly Market Report --- Hardware

A SATISFACTORY VOLUME.

The weather has been so distinctly unfavorable that business in some lines has been held back. The general volume of trade, however, has been quite satisfactory.

It is stated that the advance in metals may lead to an increase in the prices of some lines of builders' hardware.

MONTREAL.

Montreal, June 20. — Still the cool damp weather continues, and still continues the demand for lawn mowers, lawn clippers and garden tools. This has been a splendid year for such goods, which does much to compensate for the loss of business in other lines which has undoubtedly resulted from the unseasonable weather.

Aside from speculation as to the length of time this strange weather will last—and as to the effect it will have upon the crops, and so, indirectly, upon business—the interest in the market rests upon the question of price. Not that there have been any great changes. Indeed at present there seems to be a lull —a lull which may precede a storm. Wrapping paper, an item of interest to hardware men has risen in price, the new rate generally being quoted at 10 per cent. advance. But other advances are in the air.

Everything Going Up.

"Everything is going up," remarked the manager of one concern. "It cannot be otherwise."

And indeed it would seem that there is much in what he says. Copper continues to advance. So does lead. The natural result, therefore, is that the products made from these materials must advance. Even builders' hardware, which has been kept down in price only by competition, is now said to be on the point of advancing. In view of the price of the raw metal frim which this is made the fact that an advance has not already been made is remarkable.

Household Goods.—Cutlery, brass and copper goods are moving well. The wedding present trade accounting for a good many sales.

Granite, enamel and aluminum ware are also in demand. The new kitchens must be furnished whatever the weather. And the necessary new equipment must be bought for the old kitchen.

Big Demand Coming.

Builders' Hardware.—Operations already started, and contracts let, show conclusively that this will be a record year for building in Montreal. The demand for builders' hardware, such as this will bring, is already being felt. Many dealers are feeling the call. They are stocking largely in consideration of the demand which is bound to be felt later.

The question of price, as said above, is one of great interest. The general belief appears to be that an advance of from 5 to 10 per cent. will necessarily be struck before many more weeks have passed.

Heavy Hardware.—Further advances in iron pipe are looked for. Bar iron also might move up in value.

Sporting Goods.—As in many other lines, so here the weather has had a harmful effect. It has interfered somewhat with the sale of canoes, paddles and such goods. It has caused the tennis players to hold back, and has resulted in a real loss in the trade in golf, tennis, and baseball balls. The other goods will probably sell later, but the wear and tear on the balls has been lost; so naturally there will be a smaller sale of these goods than there would have been had the weather been more summerlike.

Weather considered, the demand for sporting goods has been remarkably satisfactory.

TORONTO.

Toronto, June 20.—Local jobbers state that, while the cold and damp weather has undoubtedly put a check on trade in many lines, they cannot complain on the score of the general volume of business. What is lost in some lines is made up in others, and, taking it all around, business has been brisk. The jobbers expect that, when the warm weather finally does arrive, the backward lines will come to the front with a rush.

The transportation tangle is as bad as ever, and it is reported that shipments are being delayed.

Seasonable Goods.—On account of the damp weather the demand has set largely to lawn mowers, shears, hose, etc. The grass has been growing with such rapidity that retailers are experiencing a brisk trade in these lines. The comparatively cool weather which has prevailed has held back to some extent the call for screen doors, window screens, wire netting and similar lines. However, business is "coming on" and will undoubtedly reach at least normal proportions.

Household Goods.—The cool weather has caused a slight falling off in the demand for refrigerators. It is understood, however, that the manufacturers have as many orders now as they can conveniently fill for some time. It will be a heavy year in the refrigerator trade.

Other lines are selling briskly. There is a particularly good demand for the cheaper grades of table knives and forks, enamelware and tin utensils, presumably for camping purposes. Camp kits are selling briskly.

Builders' Hardware. — Rumors are heard of impending advances in many lines. The higher cost of raw material has made this contingency a quite possible development in the not far distant future. In the meantime, there is a very heavy demand. A scarcity of brick is retarding building operations somewhat, but this has not checked the call for hardware.

A reduction of 10 cents has been made in the price of cement by the Canada Cement Co., as a result of the reduction of the duty.

Havy Hardware.—There is a good demand in all lines with prices firm. Supplies are said to be quite sufficient.

Sporting Goods.—There is now a very active demand for every variety. Baseball goods are selling particularly well and there is a well sustained call for rifles, ammunition, fishing tackle and supplies, tennis goods, etc.

WINNIPEG.

Winnipeg, June 17.—A feature of the week has been the cutting in half of cement duties which has had a stimulating effect on Western business in building lines generally. With the prospect of plenty of cement has come, however, another retarding feature, the great scarcity of plate, which may hold back much finishing work.

Woven wire fencing and barb wire have been moving freely since the first of the month.

The volume of wholesale business continues satisfactory and the country retail trade has improved greatly since seeding finished and the farmers' season of building and fencing commenced.

GIVING LOVING CUP.

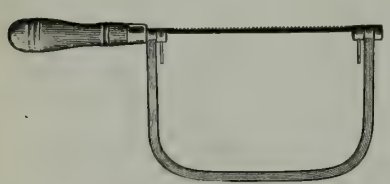
The sales force of S. Sternau & Co., Brooklyn, N. Y., as an indication of their esteem, recently presented to the members of the firm a handsome sterling silver loving cup. G. L. Miller made the presentation and the two members of the firm, Sigmund Sternau and Lionel Strassburger, responded fittingly.

New Hardware Goods

PLUG SPANNER.

J. H. Williams & Co., Brooklyn, New York, have placed a new drop-forged tool on the market, the "Falcon" plug spanner.

In addition to its obvious utility in the setting and removing of basin, and sink, plugs and strainers, it is a compact and dependable tool for the plumber's kit.



The "Falcon" Plug Spanner.

The fingers are ground and the tool is hardened and tempered for severe service; otherwise unfinished. It is furnished with and without handles. The dimensions of finger ends are such as to make the tool universally adaptable to all sizes of plugs and grate designs.

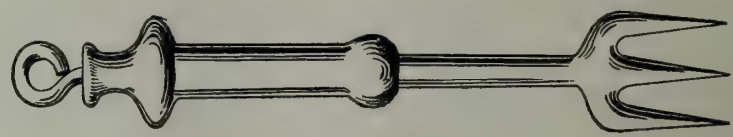
COPING SAW.

E. C Atkins & Co ., Hamilton, Ont., and Vancouver, B.C., are putting out a new coping saw frame. The principal features of this saw are obtained through the use of a high grade blade, 3-8 of an inch wide, 3-16 thick, which gives a firm and rigid structure. The frame is 7 1-4 inches from handle to end, and 4 5-8 inches deep.

It is fastened to the handle by a malleable iron threaded ferrule. Through

Atkins Coping Saw.

the use of thumb screws in which wires are inserted, the blade may be instantly adjusted to cut sharp or unusual angles with perfect ease and without strain on the blade.



DETAILS OF LANTERN.

The Ontario Lantern & Lamp Co., Hamilton, have devoted much attention to the perfection of a strong general purpose lantern to be retailed at a low price. They have completely re-built their Climax tilt lantern with this purpose in view.

It is made by their patented double seaming process, which prevents any chance of leakage. The tubes are drawn from heavy Welsh tinplate, are perfectly air tight and are without any corrugations at the bends.

The air chamber is correctly proportioned to the capacity of the air tubes. It cannot become overcharged with air even in a gale and the lantern will not blow out.

The handle will "stay put" in any position. The method of lighting is exceedingly simple. The globe being tilted away from the burner; which by the way is locked on to the lantern; and the Climax can be lighted without removing mitts or driving gloves.

Glendale Ice Pick.

ICE PICK AND REEL.

The Glendale Manufacturing Co., New York, have put on the market two new articles, the Glendale Ice Pick and Clothes Reel.

The ice pick has only three parts—the main shaft, the sliding-sleeve handle and the spiral spring inside of it. It is

so designed that it cuts the ice, the three prongs acting like a knife. The pressure of the spring in the handle prevents the prongs lifting from the ice between strokes. Consequently the spattering of small particles of ice is done away with.

The clothes reel is for indoor use. It is equipped with 15 feet of stout braided cord, wound up inside a dirt-proof metal case. When not in use, the line can be reeled up.

PORTABLE SAFETY LAMPS.

The new Pape Safety Lamps are designed for use with the now well known Fors Accumulators.

Electrodes of a circular type are used in these accumulators, the positive electrode being placed inside a porous pot, while the negative plate completely surrounds it. The grid of the positive plates are cast in one piece, and consist of vertical ribs and horizontal plates forming numerous small pockets. The centre of the grid is hollow, and one-half the vertical ribs extend inwardly from the outside periphery of the horizontal plates, the remaining vertical ribs extending outwardly from the inside periphery. The vertical ribs only extend for one half the depth of the horizontal plates so forming, when pasted, a continuous mass of active material locked in every direction by the vertical ribs.

The result is a very strong plate of light weight, proof against buckling and consequent shedding of paste, with a relatively high discharge. At the rates of discharge required for electric safety lamps from 18 to 22 watt hours per lb. of complete cell are obtained.

The lamp cases consist of either solid drawn aluminium tube with a foot and collar cast on, or light aluminium castings.

Trunnion pins carrying a yoke are riveted to the cases by means of lugs, and a set screw through the centre of the yoke serves to hold a lantern firmly in position on to the case containing the battery.

Four sizes of the lamps are standardized, two being with circular cases for 2-volt batteries, and two with square cases for 4-volt batteries. The lanterns of the 2-volt sizes have circular glasses, and are rated to give one candle power for 12 hours and three candle power for 12 hours respectively. The 4-volt sizes give three candle power for 12 hours and six candle power for 12 hours respectively; and are fitted with bull's eye lenses and reflectors for projecting a powerful beam of light.

Both the lamps and accumulators are entirely British made, and are manufactured and sold entirely by Richard Pape, Ltd., Belvedere Works, Belvedere, Kent.

Stoves, Furnaces and Accessories

Cold Brings Demand for Second Hand Stoves

These Were Necessary to Make "Summer Places" Endurable —Ranges Were Also Needed in Many Houses to Dry the Wash—Good Profit Made by Some Dealers Who Met This Need—Care Should be Taken to Make Customers See That Second-hand Stoves are Only a Side Line.

"It is an ill wind," said the old proverb, "which blows nobody good." But winds are strange things. It appears the same one may blow the same man both good and bad. Take the stove dealers, for instance. At the present time they have been suffering by reason of the cool, unseasonable weather. They have lost sales, some of which they will pick up later on, some which they will undoubtedly lose. Yet the same weather which has brought about this unhappy state of affairs has also created a demand for stoves. That such should be the case seems almost impossible; but, as has been said, wind and weather are strange things.

The weather of the last five or six weeks has been so uncertain as to be almost certain. Bright days would turn suddenly into rainy ones. Fresh days would become suddenly cold. People gave up speculating as to whether or not it would rain. They took it for granted that it would.

An Unexpected Turn.

But what has this to do with stoves? Why simply this, that the very chilliness and bleakness, the very unseasonableness of the weather has created a demand for some lines. Coal oil stoves, which were expected to sell very well, did not move as had been hoped. The sale of gas stoves, too, has been somewhat interfered with: but for some models of ranges and heaters there has come an unexpected demand. Those dealers who foresaw this call, and prepared for it, have turned the bad season into a profitable one. The seven lean weeks have turned out to be fat ones.

Thinking that "things would take a turn," and that the bad weather must shortly give place to warm and pleasant days and nights, many left their city homes for country places. These have turned out to be bleak places. The improvement in the weather has been slow in coming, and the summer homes have rather proved resorts for the rainy season. Those who went there to make merry outside remained to huddle within and to regret ever leaving town

Cheap Heaters Wanted.

But even inside it has been cold, and as a result there has sprung up an unusual demand for a cheap grade of heater—especially for second-hand stoves. People who ordinarily would feel shame-faced about buying a stove which had been used have made no bones about it this season. The stove they only wanted to tide them over until the real Canadian spring weather came. They did not expect to need it long, and so only wanted to make a small outlay.

But in second-hand heaters, for the man who handles the right, there is a profit. The call for this line, therefore, has meant money to the dealer who was able to meet the need.

And those who have stayed at home have also felt the necessity of buying a stove. Weather may come and weather may go, but washing goes on forever. There is a Monday in every week, and a succeeding Tuesday, which requires the clothes to be dry. Here is where the present season has been peculiar. Usually at this time of year it is an easy thing to get clothes dry. This season things have been different. Hang clothes outside and the general dampness would prevent their drying out properly. Quite likely they would get rained upon. Inside the furnaces are out—for it has hardly been cool enough to leave them in. There has, therefore, been little opportunity to dry clothes in the basement.

Quick Drying Necessary.

Behold, therefore, another demand for stoves—a demand for a cheap range for the laundry—a second-hand stove perhaps, but one in which a fair fire could be built, and which would throw out a heat to make the speedy drying of the wash possible. Good housekeepers will say that clothes must be dried fairly quickly to be properly dried. They must, therefore, be dried artificially in weather such as has been experienced this spring, and such as may continue for some little time according to the present signs.

A Montreal dealer who let it be known that he had second-hand ranges for sale, installed a large number in basements, where they were wanted for much the use outlined above. Perhaps his profit was not tremendous. But certainly this man got rid of a large number of stoves which he had taken in exchange for new models. Moreover, he did make quite a considerable sum on each stove; and he met a real need. When new ranges are wanted those to whom he sold second-hand ones will likely come to him, for the dealer let it be known that he only had a few second-hand models which he was willing to install cheaply. His real business, he advised all, was the selling of high-class stoves.

Keep the Truth Forward.

That is a point worth remembering. One of the dangers in handling second-hand ranges is that people may associate the salesman with a second-hand business. The truth must be continually kept forward, otherwise a future purchase of a new and expensive model may go elsewhere.

But if this point is watched properly, there cannot be any harm in meeting a peculiar need, such as has sprung up this spring, with a sale of second-hand models. Some dealers have turned what might have been a poor season into a good one in this way. There may still be time for some more such selling.

NEW STOVE WAREHOUSE.

Toronto, Ont.—A large new building is being erected here by the McClary Manufacturing Co., at the rear of their present office and warehouse on King West. When completed it will practically double the capacity of the Toronto branch. Work is now commencing on the roof and it is expected that part of the building will be occupied before the end of the month.

The building has steel foundation frame, and has been built on highly substantial lines.

TO KILL CATERPILLARS.

Montreal. — To fight the caterpillar pest the Sapho Manufacturing Co. have just placed upon the market "Coconicide," a liquid spray which aims not only to kill the caterpillar, but to cause them to drop to the ground before they die. The spray has been tested in Outremont with fine success.

Weekly Market Report---Stoves

INCREASES REPORTED.

The stove market is brisk, despite the handicap of bad weather conditions. Manufacturers report that they are doing more business than last year; one firm estimating their increase at 20 per cent.

A marked increase is reported in the sale of gas stoves this year.

MONTREAL.

Montreal, June 20.—The continuance of the cool, damp weather has had a bad influence upon all lines of trade. Especially has it retarded the sale of stoves. In the country the roads are bad. The farmers have been kept from coming to town, and their purchases are, therefore, unmade. Moreover, the need of new stoves is not felt so much in such weather as this. People do not feel like buying when the rain is descending. They rather resolve that they will make the old model do.

What business has been delayed, however, it is thought will be secured a little later on. The orders being received for future delivery seem to promise this. Even for furnaces a big future demand is already felt.

Another Advance Necessary.

During the week there have not been any great price changes. One advance only has been noted—this relating to copper goods, the discount upon which has been changed from 47½ per cent. to 40 and 5 per cent. Such an advance was to be expected, in view of the high cost of ingot copper. The higher price struck some weeks ago was not enough to cover the recent leaps in the ingot market.

Summer Goods.—It is here that the demand has been interfered with most. Who feels an urgent need of an ice cream freezer this weather? Who sees the necessity of securing a new refrigerator? Who needs a watering can with which to attend to the flower beds? With daily rains watering cans are of little use. Refrigerators are not the crying need that they usually are at this time. It is a season when people are finding themselves able to do without.

Putting Off Buying.

Gas Stoves.—Here, too, the demand has been seriously interfered with by reason of the cool weather. Many are putting off buying. Others have decided that their range will do them quite well. Perhaps there will come a change in these opinions when some really hot weather comes, but the change in temperature is needed immediately.

Ranges, Heaters and Furnaces.—What is true of gas stoves is equally true here. There is a general putting off. It is a little early for the sale of ranges any way—also for the sale of furnaces and heaters. Still there should be a greater movement of preparation than there is. The spring buying is being held back.

That the total sales will be less than last year does not seem at all likely. Orders for later shipment are already being placed in large quantities. But the situation is serious in this respect; that it promises to make a tremendous rush for all classes of goods a little later on. Hundreds of dealers will be sending in their orders at once. The natural result will be a congestion in the shipping departments, and slow deliveries which will cause inconvenience to retailer and to the retail buyer. It would seem that the wise dealers are those who are not waiting for the seasonable demand to come, but who are preparing for it in faith that it will arrive.

Many are ordering their furnaces ahead. Indeed, prospects at present are for a fine furnace season. Remembering the troubles they had in getting deliveries last year the dealers are arranging in time for a good stock.

TORONTO.

Toronto, June 20.—The weather has been far from favorable, but the stove trade does not seem to have suffered here to any considerable extent. Orders are coming in and the manufacturers state that they find business to be much brisker than usual at this season of the year. One firm reported that they have made an increase so far of 20 per cent. over last year for the same period; which is quite a remarkable advance in view of the big record hung up last year.

The booking for fall delivery does not seem quite as brisk as it was for a time, but it is still quite up to the normal. Orders for immediate delivery are more satisfactory. There is a steady volume of orders which keeps the stove manufacturers busy. "We are selling stoves almost as fast as we make them," stated one man.

Large Demand in City.

Gas Stoves.—The demand has not slumped to any extent yet, but it is becoming more centralized. The orders now come almost entirely from the city, outside demand having fallen off considerably. It is stated that a great many more gas stoves have been sold this year than ever before. "You would be surprised if you knew just what our increase has been," said one manufacturer. "In past years, perhaps, we did not get our share of the trade. Others may have been selling more, although we never had any reason to suppose this. Our trade this year, however, has increased to a most remarkable extent."

Oil Stoves.—There is still an active demand for oil stoves. The bulk of the season's business has been done, however.

Range.—The coal range trade is quite brisk. Orders are coming in for one, two or three—seldom for more. They are so frequent, however, that they bring the volume of trade up to a very satisfactory total indeed. The cold weather has undoubtedly had something to do with this. People who had intended to postpone their purchases have been compelled to buy now.

Furnaces.—The activity in the furnace trade is becoming more marked every day. One order for twenty furnaces was placed this week, with the stipulation that they be delivered within two weeks; which shows the furnacemen are becoming busy. And the demand is not confined to the city trade, by any means. Orders are coming in from provincial points, some for future, more for immediate delivery.

"I don't suppose there will be a shortage in furnaces this fall," was the statement heard to-day, "but demand is going to run production close. We look for a record year."

WINNIPEG.

Winnipeg, June 17.—There is nothing specially new to report in the stove business at present. Heating apparatus generally is keeping pace with the great development of building this year in Winnipeg and Western cities, towns and villages. There is a marked improvement in sales of hot blast furnaces at country points. The old established and well to do farmers when building new homes almost invariably favor the hot air furnace when they erect a new residence.

There is a fair trade in all cooking ranges, coal, wood and gas. Electric cooking apparatus is growing in favor and is no doubt destined to play a big part in the future where hydro-electric power is cheap and plentiful.

Where Half Holidays Are Observed

A List of Practically All Places in Ontario Over 1,000 in Population, Giving Information as to Half Holidays and Hours of Closing — It Will be Seen That the Early Closing Movement is Gaining Ground Rapidly.

The following list includes practically all places in Ontario over 1,000 in population. The information as to half holidays and early closing has been secured at first hand from the clerks of the various municipalities.

Alexandria.—No half holiday. Stores close at 7 p.m. every day except Saturdays.

Bracebridge.—No half holiday.

Blenheim.—Half holiday on Wednesdays from June 15 to September 15.

Brantford.—Half holiday on Wednesdays during June, July and August. (Butchers and grocers only.)

Brockville.—Half holiday on Wednesdays during July and August.

Bowmanville.—Half holiday on Wednesdays during June, July and August.

Brampton.—Nothing decided yet.

Berlin.—Half holiday on Wednesdays.

Bridgeburg.—No half holiday.

Chatham.—The grocers close on Tuesday afternoons at 1. So far no other retailers have fallen in line.

Cobalt.—Stores close at 7 o'clock on Tuesdays, Thursdays and Fridays. An agitation for a half holiday but nothing settled.

Colborne. — Half holiday on Thursdays during July and August. Stores close at 12 o'clock.

Chesley.—No half holiday.

Collingwood.—No half holiday. Stores close at 6.30 every evening except Saturdays.

Cobourg—No half holiday.

Carleton Place.—No half holiday.

Deseronto.—Half holiday on Wednesdays during July and August.

Dresden.—No half holiday.

Dundas.—Half holiday on Wednesdays during June, July and August.

Essex.—Half holiday on Thursdays, starting June 20 and ending August 29.

Exeter.—Half holiday on Thursdays during July and August.

Elora.—Half holiday on Wednesdays during June, July, August and September.

Fergus.—Half holiday on Wednesdays during June, July and August.

Forest.—Half holiday on Fridays during June, July, August and September. Stores close at 12 o'clock. Closing time the year around is 7 o'clock, except on Saturdays, when it is 10.

This list will be found of inestimable value by the traveling man. By using it, he will be able to avoid the delays caused by visiting towns where the places of business are closed.

Every traveler should clip the list out and save it for reference in planning routes during the summer months.

Galt.—Nothing done yet. Matter is being considered, but holidays will not be generally observed.

Glencoe.—No half holiday.

Gravenhurst.—No half holiday.

Havelock.—Half holiday on Wednesdays during July and August.

Hespeler.—Half holiday on Wednesdays during June, July and August.

Hamilton.—Half holiday on Wednesdays during June, July and August.

Hensall.—No half holiday.

Hawkesbury.—No half holiday.

Hagersville.—Half holiday on Thursdays during June, July and August.

Ingersoll.—Agitation for half holiday on Thursday during July and August.

Kingsville.—Half holiday on Thursdays during summer months. Stores close at 6 p.m. during Tuesdays and Thursdays through the whole year.

Kenora.—No general half holiday. Butchers close on Wednesdays.

Leamington.—Half holiday on Fridays until September 1.

London.—Half holiday on Wednesdays during June, July and August.

Lakefield.—An agitation for half holiday on Wednesdays during July and August, but opposition is being shown.

L'Original.—No half holiday.

Merritton. — Wednesday afternoons during June, July and August.

Midland.—No half holiday.

Mount Forest. — No half holidays. Close at 6 o'clock every day except Wednesdays and Saturdays.

Milton. — No half holiday. Stores close at 7 p.m. on Mondays, Wednesdays and Fridays.

Meaford.—Half holiday on Thursdays during June, July and August.

North Bay. — Agitation to close on Wednesdays during July and August. Not yet decided upon.

Niagara Falls.—No half holidays, being an excursion point.

Newmarket.—Half holiday on Wednesdays during July and August.

New Liskeard.—No half holiday.

Ottawa.—Many merchants make a practice of closing their places of business on Saturday afternoons for two months in the summer.

Orangeville.—Half holiday on Wednesdays during July and August.

Oshawa.—Half holiday on Thursdays during the summer months.

Peterboro.—Half holiday on Thursday afternoons.

Port Credit.—Half holiday on Wednesdays during June, July and August.

Port Colborne.—An agitation on foot for half holidays. Nothing decided yet.

Port Dover.—No half holiday.

Port Arthur.—No half holiday.

Port Perry.—No half holiday.

Preston.—No half holiday.

Renfrew.—No half holiday.

Ridgetown.—Half holiday on Wednesdays, closing at 12 o'clock during June, July and August.

Rodney.—Half holiday on Wednesdays during June, July and August.

Simcoe.—Half holiday on Thursdays. All stores close at 6 o'clock on other days.

Southampton.—No half holiday.

Sudbury.—No half holiday. Stores close at 6 p.m. five nights in the week in some lines of trade.

St. Marys.—Half holiday on Wednesdays during July and August.

Sault Ste. Marie.—Half holiday on Thursdays.

St. Thomas.—Half holiday on Wednesdays during July and August.

Tillsonburg.—No half holiday this summer.

Tavistock.—No half holiday.

Uxbridge.—No half holiday this year.

Weston.—Half holiday on Wednesdays.

Windsor.—The grocers close on Thursday afternons.

Walkerville.—Half holiday on Thursdays.

Winchester.—No half holiday. Places of business close at 7 p.m. on Mondays, Wednesdays and Fridays the year around except during the month of December.

Wateford.—Half holiday on Thursdays during July and August, stores to close at 12.30.

Personal Chat With You About Ourselves

New Liskeard, Ont., June 6, 1912.

Dear Sirs,—As I am out of the grocery business and working at the hardware, it would greatly oblige me if you would cancel the Canadian Grocer you have been mailing, and send me Hardware and Metal.

I consider The Canadian Grocer one of the best investments I made, and am trusting I will be able to say same about Hardware and Metal.

Yours truly,

ASA E. JEWEL.

Mr. Jewel may rest assured that Hardware and Metal will be of just as great assistance to him in his new business as Canadian Grocer was in his old line.

All the MacLean publications occupy easily the foremost place in their respective fields. Backed by the strongest publishing organization in Canada, they are able to give their readers an absolutely unique service.

By publishing eleven high-class trade papers, the MacLean Publishing Co. can secure articles on business subjects by authoritative writers, which are of the utmost value to readers of their different papers.

The cost of these articles would be prohibitive to small publishing firms, who are frequently reduced to the necessity of clipping articles from United States exchanges. Of course, business conditions are entirely different in Canada from what they are across the line, so that pilfered reading matter of this kind is of little or no service to Canadian retailers.

SOMETIMES OUR SUBSCRIBERS DISCONTINUE.

We feel safe in saying that no other publication in Canada has less difficulty in securing subscription renewals than Hardware and Metal.

In one week, recently 101 subscriptions expired. Our readers were notified of this, and asked to remit for the next year's subscription. One hundred renewals came back promptly, while the remaining one asked us to discontinue, as he had gone out of the hardware business.

Even in discontinuing their subscriptions, our readers always have something good to say about Hardware and Metal, at the same time explaining why they are discontinuing.

R. F. Johnston, of Acton, Ont., recently sold out his hardware business, and went West to enter the contracting business. In writing us asking us to discontinue sending paper to his address, he said:

"I would never think of running a hardware business without Hardware and Metal. Not only are your predictions on the market worth five times the price of subscription, but your articles on business management are very helpful and interesting."

Another subscriber who has gone out of the hardware business, is C. E. Mills, Cardinal, Ont. He formerly conducted a hardware and tinsmithing business at Brinston, and, while there, he subscribed to Hardware and Metal. Under date of June 17, 1912, he writes as follows:

"I notice that my subscription to Hardware and Metal expires on June 30, and, as I have gone out of the hardware business, it will not be necessary to have it come any longer. I have been well satisfied with it, and, had I continued in my business, I would also have continued to take Hardware and Metal. But, as I am in another business, you will please stop paper when time expires."

HOW HARDWARE AND METAL HELPS THE TRAVELERS.

One of our traveler friends made the suggestion, a year ago, that Hardware and Metal should compile a list of half holidays as observed in various Ontario towns, for the guidance of the boys on the road.

The suggestion came a little late in the season, but, with the co-operation of our readers, we were able to publish a list, which was very helpful. Many travelers wrote us to express their thanks for the trouble we had taken to secure this information.

But we have gone one better this year. We started out early gathering information, and, with the assistance of travelers, retail hardwaremen and town clerks, we have compiled a most complete list of half-holidays, which will be found on the preceding page.

This is one of the little ways in which Hardware and Metal helps the traveler. But it is insignificant when compared with other ways, which, however, may not be quite so apparent.

Every traveling salesman who calls on the hardware trade, will be ready to concede that hardware dealers are kept well informed of market tendencies and of all important developments in the trade through reading Hardware and Metal's weekly issues.

When a traveler advises a customer to buy white lead, in view of an approaching advance, his advice carries greater weight because Hardware and Metal has reported to the same effect. There is no need for him to waste valuable time in trying to convince the customer that his advice is genuine, and not merely due to a desire to make a sale.

If a traveler is introducing a new line, he finds that it is not regarded with suspicion and distrust, if the dealer has read about it in Hardware and Metal. On the contrary, his interest has been aroused, and he is more likely to grant a good interview even though he may be busy.

So it is that the travelers who benefit most from Hardware and Metal, are those whose firms are advertising regularly in the paper. It is blazing the way for them, influencing their prospects before they appear on the scene, making it easier for them to get the signature on the dotted line.

"Oh! You're Griffith, are you?" said a Port Hope dealer to H. L. Griffith, of Melbourne, Ont. "I saw your ad. in Hardware and Metal, and I was just going to send you an order for halters."

"Well, here I am myself to take your order," replied Mr. Griffith.

And he got a good one.

Methods of Retailing Paints and Varnishes

Go After the Farm Trade in Paint

Why the Farmer Should be a Heavy Purchaser of Paint and How He Can Be Brought to Recognize the Fact—The Need of Paint on the Farm—How One Dealer Worked Up a Big Trade.

The farmer visits the hardware store more often probably than men of other classes but he buys very little paint.

The farmer does not seem to believe in paint to any great extent. His house gets a few coats when it is first built but brush and woodwork seldom meet after that. Few barns are ever painted. The front fence may get a touch of paint if some enterprising merchant decides to advertise through that section; but not otherwise. The wagons, buggy and implements are repainted only when dire necessity arises.

The cause of it all is that the average farmer regards paint as a decorative substance. "Can't spend money on appearances," is his mental verdict if the thought occurs to him that he should invest. He does not recognize the fact that paint has a distinct value as a preservative, that it lengthens the life of his buildings and implements. If he could be convinced on that score, he would become a steady customer.

The fact that the average farmer does not appreciate the value of paint is proof positive that the dealer has not striven to inform him on that point. The field has been neglected.

A statistician after an exhaustive enquiry, made the statement recently that 75 per cent. of the buildings in America were not painted. The percentage of unpainted buildings in the country would be considerably above the average.

And yet the farmer to-day is more prosperous than ever before. It may be, as agriculturists so often point out, that the high cost of living is due to the excessive profits of the trusts and cold storage companies, but the fact remains that the farmer is getting his share of the higher prices charged for foodstuffs. At one time the farmer found it hard to eke out a precarious existence. His wife and family had to work day and night. He gained a minimum reward for his hard and unceasing toil. To-day it is different. Labor-saving devices have reduced his hours and lightened his toil. He enjoys most of the conveniences formerly confined to city life. His sons go to agricultural college and his wife takes in help. He has a telephone, a modern heating system, a bathroom and, perhaps, an automobile.

The average farmer buys about one-fifth of the amount of paint that he should, according to the estimate of a manufacturer. By saving a few dollars on his paint bill, he is losing hundreds in depreciation of property.

The reason why he does this is that he has never found out the real value of paint. Isn't it time that the facts were brought home to him?

It follows that the farmer is in a better position than ever before to paint his possessions and the dealer should direct his efforts toward improving the farm demand. This can be done very largely by discussing the properties of paint with every farmer who visits the store . A word or two will suffice.

"What about paint? Not going to do any painting this year? Well, if I were in your place I'd do a little figuring before I decided this matter. If you were to paint your barn, for instance, you would add several years to its life. Isn't that worth while? Its the same with your implements and wagons. Paint fends off decay and prevents rust. I'm not exaggerating when I say that one dollar spent in paint now will bring you ten dollars later in lengthened service."

The farmer may not buy. The chances are that he won't the first time. But he will have something to think about and he will undoubtedly consider what he has been told. A judicious word on each succeeding visit will keep him thinking. Before long, he will see the matter in its proper light and a sale will soon result.

A Heavy User.

The farmer should be a heavy user of paint. He has houses, barnes, fences, implements and buggies to look after. Properly kept up, his farm would consume a great amount of paint each year. Get him thinking along the right lines and he will become a steady and heavy purchaser. The importance of catering to the farm trade cannot be overestimated.

Drive the Lesson Home.

The main point to be used, of course, is the economic argument. All men can be reached most surely through their pockets. Show Mr. Farmer where he will save money and he will take your advice willingly. Some can be won over by talks on the improvement in appearance which can be wrought by the use of paint but with the great majority it simmers down to a matter of dollar and cents.

Here is how one dealer went about it. He secured a supply of literature dealing with the question of preserving property by the application of paint and

Original Window Display in the Store of A. Latham, Moose Jaw—Dressed by L. A. P haneuf.

handed out a copy of this to every farmer who visited the store. Next time they came back, he asked them if they had read the pamphlet and discussed a few of the points introduced. To lend a further weight to the economic advantages of paint, he arranged a series of window displays all bearing on that question. One display centered around a plank half of which had been painted. The other half was showing signs of wear, and the contrast it presented to the painted half was very marked. A sign read: "The cheapest kind of insurance against decay. Are you taking any out?" This display brought immediate results.

Early Interest in the Flax Crop

Much Depends Upon the Number of Acres Which the Western Farmers Sow With This Seed—But the Oil-Giving Qualities are Not Really Known Until the Seed is Crushed, so the Future Price is Not Sure to Drop Even When a Good Flax Crop is in Sight.

Early though it is, considerable attention is already being given the Canadian flax crop by crushers and large users of linseed oil. The reason is, of course, the scarcity of seed which is now making itself felt. In view of this the amount of seed which will be grown in Canada and the States next year is of great importance.

The production in the Dominion last year was greater than had been at first expected. In all over 8,000,000 bushels were produced, which means that Canadians had some 6,000,000 bushels to export, for the domestic need is only about 2,000,000 bushels. This being so, it would seem that there would be ample seed for Canadian users, and that the price would be low. Indeed this would be the case were not Canada's surplus so eagerly snapped up by the crushers across the border. The production in the States is only about 20,000,000; and since the crushers need more than double this much seed they must buy largely from outside.

Demand Likely to Improve.

But upon the size and quality of this season's crop in the United States and Canada, depends to a considerable extent the height to which the price will soar, or the degree to which it will drop. The demand is reasonably certain to advance somewhat; the supply therefore will have to be considerably larger, too, if prices are to remain at their present level, or to fall lower.

In the past there has been somewhat of a prejudice against flax, on the part of the farmers, because it takes so much out of the ground. There is no doubt it is an exhausting crop—but at the present price the farmers are beginning to think it worth cultivating in spite of this. From what can be learned thus early, a good deal more is being put in, out in the Canadian West, than there was a year ago—and as has been said, the crop of last year was considerably larger than had been expected.

Flaxseed, however, is a peculiar product. It may look well. It may sound well. And then, when it comes to the crusher, it may be found that it is of poor quality despite its fine appearance. There seems little means of telling how oil-yielding the flax will be until it has actually been crushed.

Of course, this does not affect the farmer. He gets his price by the bushel, and if his grain looks well he secures the high figure, which repays him for his labor and for the good the crop has taken from his soil. But the quality of the seed means much to the crusher, to the paint men and to the hardwaremen. Upon it—as well as upon the abundance of the seed—depends the price of oil. If the flax is of good quality—as was last year's Canadian crop, the yield of oil per bushel will be large. On the other hand, let the quality be poor and the crushers will find themselves short of oil, so that they will have difficulty filling orders even at a high price.

In view of all these things, therefore, it is small wonder that interest should now be taken in the coming flax crop. There is a great deal of faith needed here. The news that many acres are being sown with flax will cause some pleasure, and will give ground for hope—but not until the fall, not until the grain is actually being crushed, will it be known how good the yield is.

A PAINT DISPLAY.

On the previous page, an illustration is shown of a window display of paint and accessories in the store of A. Latham, Moose Jaw. It was arranged by L. A. Phaneuf, and is undoubtedly one of the most original and striking seen in some time. The arrangement of the stock is both new and effective.

The background was of dark blue crepe paper, trimmed with white, against which the stock showed to advantage.

JOHN IRWIN TAKES OVER McARTHUR, CORNEILLE & CO.

A change of interest to all connected with the paint business, took place last week, when John Irwin severed his connection with Brandram-Henderson Limited, to take charge of McArthur, Corneille & Co., 310 St. Paul street, which concern he and a silent partner have just purchased.

Mr. Irwin, though a young man, has had a thorough experience in the manufacture and sale of paint, white lead, oils, and other such lines as are handled by McArthur & Corneille. He joined the firm of Henderson & Potts eleven years ago, filling first the position of secretary. In 1905 he became manager of the Winnipeg branch of Henderson & Potts, and in 1906 opened Marshall Wells' paint department, though still retaining his connection with Henderson & Potts.

John Irwin, Montreal, who has taken over the business of McArthur, Corneille & Co.

In 1908 Mr. Irwin became sales manager for Brandram-Henderson, Ltd., successors to Henderson & Potts; and in 1910 opened and managed the Toronto branch of that firm, leaving the Queen City in 1910 to assume the position of assistant manager at the head works, Montreal.

Next week Mr. Irwin leaves on a trip to New York, Philadelphia and Boston in the interests of his new firm.

Store Nearly Completed.

Strassburg, Alta.—H. B. Durne's new hardware store is nearly completed, and will soon be occupied. It will be most up to date in every respect.

Weekly Market Report --- Paints

SHORTAGE DEVELOPS.

There is a tendency noted toward scarcity in many lines. The heavy demand for paint has shortened up stocks. Linseed oil and white lead are becoming scarce in the face of the extremely heavy consumption.

Oil has advanced in price and turpentine has been slightly reduced. No other price developments have been noted during the week.

MONTREAL.

Montreal, June 20.—The great jump which white lead made last week is still causing considerable comment, not so much because it was the greatest individual advance made for some time, but because it appears that this will not be the last rise. Eight cent lead now seems more likely to change from a prediction to a fact.

Aside from white lead, there is a great deal of interest in the flax seed situation, and in glass. It seems likely that the near future may see an advance in both these lines. Flax seed is scarce, and does not seem likely to become more plentiful since there is no crop coming on immediately. Glass is fairly plentiful at present, and there is some now on the way out; but should the trouble in Belgium become more serious some of the Canadian orders now placed may not be immediately filled.

Makers Who Suffer Most.

For paint generally the demand is great. In face of every obstacle which the weather is presenting orders are piling in. A slight slackening in the call for certain lines has been noted of late, but still the manufacturers are having more than they can do to fill orders.

White Lead.—After all, it is really the manufacturers who are suffering by reason of the present advance. Many dealers have contracted for their lead. They, therefore, are getting for the old price, lead which is costing the manufacturers considerably more to make.

This week pig lead has advanced still further, and there appears no good reason for supposing that it will fall in price. It is said that those controlling the lead situation have united to keep the price up. Certainly it would seem there has been some force—other than the greatness of the demand over the supply—working for higher prices.

Still the tendency seems to be toward higher prices for white lead.

Canadian Seed Needed.

Linseed Oil.—Early in April there were in Duluth 641,000 bushels of flax seed. Last week there were a little less than 172,000 bushels. Such a diminution in the stock means that the consumption in the States is much greater than the supply; and as a natural result, Canadian seed will be in still greater demand.

This has already brought about a shortage here, which has made it impossible for some of the grinders to fill their contracts. Even the paint houses are none too well supplied with oil, and they are, therefore, loath to sell much to the dealer. At $1 and $1.03, the prevailing price, there is not a great deal of profit, and supplies need husbanding.

Paint.—Business continues exceedingly heavy, though the natural falling off is evidently coming. Manufacturers will be almost glad to welcome it. They have been rushed terribly of late.

Glass.—While shipments, which are expected by some of the local handlers, make it evident that there will not be any immediate shortage the future is not so secure. A strike would materially affect deliveries, and the supplies here are not large enough to meet the heavy summer demand for long. Higher prices have been talked of already. There are things more unlikely than their coming.

TORONTO.

Toronto, June 20.—The past week has seen no diminution in the volume of demand, but the scarcity felt in some lines has become more pronounced. There is a tendency upward in price, as a result.

The talk of an advance in the price of prepared paint has been revived since the advances in linseed oil and white lead. Some state that they do not see how an increase can be avoided, but others are more conservative. The paint manufacturers are quite apparently loath to change their quotations at this juncture.

Linseed Oil.—The price of linseed oil has been advanced 3 cents to $1.08 for raw, and $1.11 for boiled. This is due largely to the scarcity which prevails, coupled with the activity in demand. Stocks are low and it is hard to obtain new supplies, but the call is as active as ever. Futures are stiffening, and some predict that oil will reach $1.2 before the present movement subsides. While the majority are inclined to discount this prediction, all believe that oil will continue firm and that other advances may be looked for.

Turpentine Down.

Turpentine.—A reduction of 1 cent has been declared in turpentine, making the price 68 cents. There is a good demand.

White Lead Scarce.

White Lead.—As announced in last week's issue, white lead has been put up 25 cents. The advance has been fully anticipated, and it has not, therefore, had any effect on the market. Large, though, the advance may seem, it is not as large as is warranted by the scarcity and high price of pig lead. White lead will probably go higher.

There is an exceptionally heavy demand at present and, as a result, a shortage has developed. The grinders are striving to keep up with the demand, but the effort to fill their orders promptly is taxing them heavily.

Glass.—There have been no developments in glass. The situation in Belgium has quieted down, and uneasiness on that score is gradually passing away. Demand is growing.

Putty.—There is a strong demand with prices firm. Prices are as follows:—Standard bulk in casks, $2.40; in 100-lb. drums, $2.55; in 25-lb. drums, $2.65; bladder in barrels, $2.80. Pure putty prices are as follows:—Bulk in casks, $3; in 100-lb. drums, $3.40; in 25-lb. drums, $3.50; bladder in barrels, $3.40.

Prepared Paint.—The demand is as active as ever. The paint manufacturers are working to their utmost capacity to keep up with the orders. It is certainly going to be a record year in paint.

WINNIPEG.

Winnipeg, June 17.—There is nothing new to report in prices of paints and oils and kindred lines except an advance of ½ cent per lb. on Paris green.

City trade is very brisk especially in outdoor lines, work on which is generally much behind as the early part of the season was very unfavorable and the proportion of wet days was above the average.

There has been a notable increase during the week in country retail trade following the conclusion of seeding operations and travelers have been doing a good sorting business with country merchants.

Linseed oil and turpentine prices are firm and there is nothing at present to indicate change.

Trade in kalsomines is fair but has naturally decreased some during last two weeks.

Dependon——Light Hard Oil Finish.

Everlastic——Quick-drying Floor Varnish.

Gold Medal—— Inside and Outside Varnish.

—These three varnishes meet all the regular demands of your trade—simplify your varnish stock—increase your varnish profit.

If any part of your house or your customer's house, is in need of varnishing, the requirement is met by one of these three B-H Varnish Specialties—Gold Medal, Everlastic, Dependon.

GOLD MEDAL.—If the front door, porch, ceiling of bathroom wants brightening, Gold Medal, Inside and Outside Varnish, gives pleasing results with its easy flowing action, and will protect the exposed surface with a durable coating, which will fight the effects of moisture and changing temperature.

DEPENDON.—If the furniture, wall, inside door, or any interior work, of either hard or soft wood, is in need of finishing or renovating, Dependon dries free from tack in a few hours, and can be polished, if desired, in twelve, stands hard wear and dries with a brilliant lustre.

EVERLASTIC Quick-drying Floor Varnish has these special qualities. It dries hard and makes a very durable coating. It is elastic and tough. It does not show heel marks nor scratches easily. It dries quickly. Has a fine lustre, and can be walked on the next day after application.

These varnishes are sold in beautiful, lithographed gallon, half-gallon, quart, pint, and half-pint cans, imperial measure. The packages make a most attractive store display. Handsome lithographed illustrated signs will accompany your order.

THE maximum of profit and increase in reputation in your Paint Department can only be secured by handling a clean-out stock of quality paints.

Minerva Paints and Paint Specialties

the famous British Brand, have proven a fast-moving, satisfactory and profitable line to handle wherever featured.

There is no skimping in the measure put in every "Minerva" can. Full Imperial Measure every time—not wine or short measure.

Our forceful Consumer advertising in direct support of the dealer has created a wonderful demand for the Minerva Line.

Investigate our proposition. It will pay you well.

Ask any Minerva Agent.

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.

377-387 CARLAW AVENUE, TORONTO, ONT.

Established in England in 1834 (L-37)

HOW ABOUT YOUR PAINT OIL DEPARTMENT?

If you could find a way to increase the profits in your paint oil department you would at least investigate it, wouldn't you? Then why not take the time during the winter months, NOW, to investigate the

BOWSER PAINT OIL SYSTEM

We have installed systems for many of your fellow merchants—it pays them—it will pay you.

You can get one outfit or a dozen, just as your requirements demand. You don't have to invest much money but you get enormous returns.

The Bowser not only prevents all waste and over-measure, but it gives your store tone and attractiveness. It draws trade because you can give better service and cleaner oil. The pumps measure the oil directly into the customer's can—no measures nor funnels. It computes the charge and counts the gallons.

Send a card to-day for free book No. 15.

Paris Green—22 cents per 112-lb. drums.

PRICE TALKS

Louder to some people than does anything else.

To make price the only point is however the greatest of mistakes. The real consideration should be "VALUE" and all this word stands for.

When you handle

MacLean Publishing Co., Technical Book Dept., 143-149 University Ave., Toronto.

Nature has solved the problem of distribution. It uses a multitude of agents to effect the distribution of its products.

Nature does not expect every seed to fall upon fallow ground and to take root. But, it achieves a profitable percentage upon its distribution. This is all that an advertiser has to do to reap a profitable harvest on his outlay.

When writing advertisers kindly mention having seen the advertisement in this paper

A Bargain

must have two essentials in order to deserve the name—it must be useful and cheap.

Hardware and Metal

offers a real bargain in its Want Ad. Department. Here, at the lowest possible cost, you can place before the very persons most interested, **hardware men and men in the allied trades,** any respectable business proposition.

TAKE A BIRD'S EYE VIEW OF BUSINESS

The Beauty of Town & Country Depends on Paint

There is a wonderful field for suggestion in beautifying town and country. The *Paint Man* should take a bird's-eye-view of the town he lives in, and the country round about to see how he can suggest improvements that can be made with paint. Paint not only improves, but it preserves, and there is always room for suggestion — the house painter is a true artist, who can use colors to harmonize or blend with the trees, and the hills and thus produce a pleasing picture with nature as a background.

MARTIN-SENOUR PAINT

100% PURE

will improve any background — will liven up and permanently beautify any spot of natural beauty. Get busy *Mr. Paint Man* — don't sit in your store and wait for customers to come — seek them out, you will be surprised to see how kindly they will take to your suggestions as to how they may do their share towards beautifying their surroundings. Innoculate everyone with the fever to **CLEAN-UP AND PAINT-UP.** Let us tell you some more new ways to sell paint.

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

Varnishes that Satisfy

THERE are two big reasons why Berry Brothers Varnishes satisfy all users. Reliable, uniform good quality is one.

The other is the advertised reputation that gives the buyer the assurance he has picked the best on the market.

Berry Brothers' Business Builders

THE BIG-5 WITH WHICH EVERY DEALER CAN MOST EASILY SATISFY THE QUALITY DEMANDS OF ALL HIS TRADE.

LIQUID GRANITE — The best in floor varnishes. Made in two grades. "A" is heavy in body and intended for use on new floors. "B" is lighter in body and intended for refinishing old floors.

LUXBERRY WOOD FINISH — For general interior work, being made in "White" and "Light". Can be rubbed and polished. Formerly known as Berry Bros. "Hard Oil Finish"—the original and only genuine Hard Oil Finish ever made.

ELASTIC INTERIOR FINISH — For interior woodwork subjected to severe exposure or usage. Possesses great elasticity combined with unusual durability—will resist action of hot water, soap, etc., better than any other varnish ever tested in our laboratories.

ELASTIC OUTSIDE FINISH — The varnish that made the best record for drying and general excellence, out of 21 different makes of outside varnish officially tested by the M.H.P. & D. Asso. You ought to make it your constant companion on every good outside job.

SPAR LUXBERRY VARNISH — In our tests in the Detroit River this varnish has year after year proved itself greatly superior to all competitors. If you are interested in a Spar Varnish that really won't turn white, write us for leaflet describing these tests.

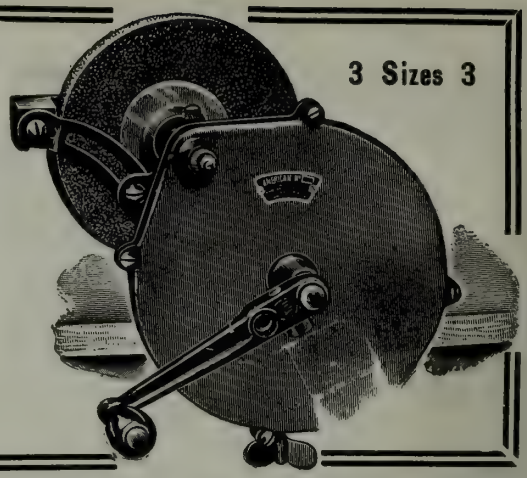
AMERICAN GRINDERS Are Real Trade-Winners

This Grinder is particularly adapted for purposes where a very compact yet powerful grinder is needed. Just the thing for a carpenter's tool chest and private shops, as well as hundreds of occasions of like nature.

When the grinder is assembled a quantity of high grade oil is placed into the case so that the machine can be used indefinitely without oiling.

The gears run in this oil path, further causing them to operate noiselessly without friction, and with elimination of excessive wear.

Stock it at once—we guarantee good results.



A card will bring circulars and prices by return mail.

If You sell one
FORD BIT EXTENSION
You'll sell more

We say this with outmost confidence, and we unhesitatingly make this statement because we know just why you will sell more if you will but show a man the Ford's qualities.

The FORD'S Bit Extension is new; is remarkably simple in construction; embodies all the best points of other makes; has several exclusive features; and is entirely devoid of any of the clumsy, awkward features that have made former extensions so unsatisfactory.

Simplicity is the Keynote

throughout the FORD'S construction. It is easy to adjust, easy to work, and cannot get out of order, as there are no breakable parts. This latter feature gives the extension exceptional strength as well.

Electricians who are now using it give their highest endorsement and say it is unquestionably the most practical ever produced.

If you are the first in your territory to introduce Ford's New Bit Extension you will surely gain new customers who will be steady, satisfied buyers.

Will you write us for new circulars describing in detail this latest FORD Triumph?

Do you want the best strop on the market— Absolutely Free?

Last season we started hundreds of dealers making money out of the

New Torrey Honing Strop

by first proving to them that it was the best strop on the market. We gave each of them a free strop to make an actual test of its merits. They were convinced themselves and found it easy to convince their customers. Now we are willing to give you the same proof—a free strop for your own use.

Every dealer who hasn't already received one of our strops free should write at once to our home address, Worcester. Tell us the name of your jobber and we'll send the strop absolutely free, except for duty.

Enthusiasm

To sell goods and make profit you must develop this quality. Home made goods always did make you feel that way. That is why so many hardwaremen throughout Western Canada are selling our

METAL CEILINGS, SHINGLES, SIDINGS AND CORRUGATED IRON

and making nice profits.
They have seen them made. They know they are right. They can get them in a hurry.
All these things will be at your service when you hook up with us.

WRITE TO-DAY.

Catalog 74-C will be sent on request.

Next in importance to the best material for making drills is the process of manufacture.

"Hercules" High Speed Twist Drills are made under the Twisted-While-Hot-Process—retaining all the strength of the steel and producing drills with long edge holding qualities.

The taper shanks, usually one size larger than ordinary, prevent tang troubles and give a greater driving power because the drill fits into the chuck firmly and in the center.

What's the use of using drills without backbones when you can get "Hercules" from your jobber. Send order direct if you prefer.

"STRATFORD" Lawn Swings

Will Sell Well at a Good Profit

We believe **The Stratford** is the best and strongest Lawn Swing on the market.

It is made from selected well seasoned hardwood stock. The seats and backs are adjustable, and the foot board can be placed between and level with the seats, this forming a hammock or bed.

A display of this swing is certain to bring buyers.

Write for catalog and prices.

The Stratford Mfg. Co., Ltd.

STRATFORD :: CANADA

4 Sizes

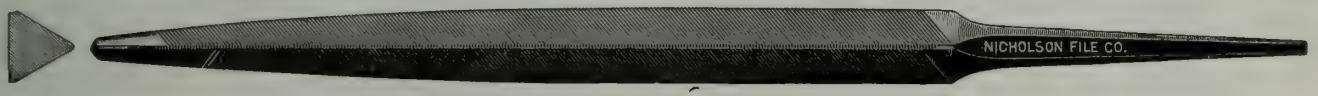
There's Quality in the

MASTER BRACE

The kind of quality that delights users of tools. The Metal parts are handsomely nickeled and the head and handles of cocobola. All ratchet parts are covered and protected from dust.

EIGHT SHARP HOLDING POINTS

in the jaws of the chuck insure the tenacity of grip. It is impossible for the chuck to work loose because of the number in which it is attached to the sweep. A flat head machine screw and a patent washer hold it securely.



The Master Brace is made in 4 sizes with 8-10-12 and 14 inch sweep.

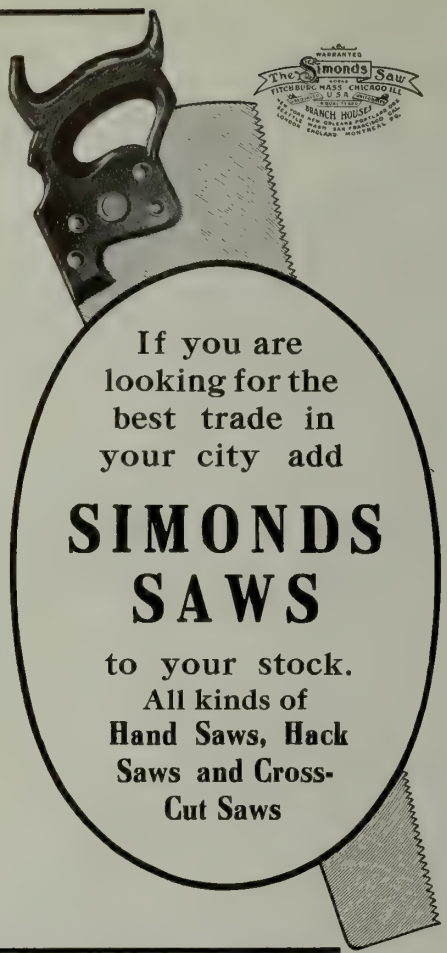
Have you read "Tool Practice" our instructive book? Send for free copy.

MILLERS FALLS COMPANY

26 WARREN ST., NEW YORK CITY

There is a Nicholson-made File for every filing purpose

Among the many other reasons why dealers should handle Nicholson-made files is their great range of shapes and grades. Each file for each purpose is made in the shape and of the grade of steel that our long specialized experience has shown to be the very best for the purpose.



In Canada, the favorite Nicholson-made files are:

"AMERICAN" "ARCADE" "GREAT WESTERN" "GLOBE"
"EAGLE" "McCLELLAN" "KEARNEY & FOOT" "J. B. SMITH"

Sell these lines. You are backed by all the great prestige of the Nicholson File Company, and your file stock is the line acknowledged to be the standard of file quality. Your jobber can supply you.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

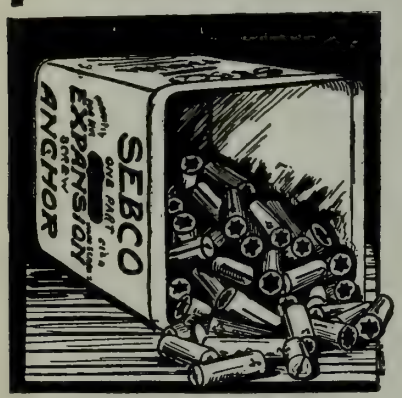
Knowledge Is Power



Every hardwareman can get valuable pointers and make his business a more profitable proposition if he will study the experiences of experts who have 'made good.' Our Technical Books for hardwaremen cover a wide range of subjects, among which may be mentioned Metal Working Books, Hardware Window Dressing, Store Business Methods, Paints and Painting, Salesmanship and Sales Plans and Advertising. We have also the very latest books on the plumbing and heating problems.

TECHNICAL BOOKS, 143-149 University Ave., TORONTO

STAR EXPANSION BOLTS

Somebody's Going To Get It —It Might As Well Be You

We are receiving inquiries every day from people who have occasion to buy Expansion Bolts---these inquiries might just as well go to you---if you could see some of the letters from Dealers thanking us for sending them business, you would not hesitate to send for our 90 day Special Dealers' Proposition. We can refer inquiries only to those who have our goods.

It's easier to sell to a man when he's in your store than it is to get him to come. We are paying to get men to come to you. Can you supply them?

TOASTERS
FOR GAS STOVES

Everybody wants them—the kind that toast, but don't burn. Do you sell them? Are you displaying and advertising the three LEADERS—the ONLY THREE—the "GYPSY," "WILSON" and "KNOBLOCK"?

If not, your line of Gas Toasters is NOT up to the highest standard—you MAY BE losing the patronage of your best customers—you ARE losing money.

The "GYPSY" Flat Gas Toaster is scientifically constructed to toast without burning. The perforated plate allows the heat to penetrate, but no flame to pass through; and the result is that the bread is toasted perfectly in a few seconds. Papered 1 doz. in a bundle.

The "WILSON" Toaster will accommodate four slices at once, and a teapot on top. This is a well-made toaster of the upright design, and we guarantee every one to give perfect satisfaction. Packed 1 doz. in a carton.

The "KNOBLOCK" Toaster is an imitation of the "Wilson," to meet the demand for a good Gas Toaster at a cheap price. Packed 1 doz. in a carton.

Write us for further description and prices of our full line of Toasters and Broilers; or send us sample order for our three leaders, the "GYPSY," "WILSON" and "KNOBLOCK." This is the Season when they are wanted—Now is the Time they sell.

E. T. WRIGHT & CO., HAMILTON, CAN.

(H. G. WRIGHT) AGENCIES AT VANCOUVER, WINNIPEG AND TORONTO

Make Money From Good Pumps---Profit

Unless a metal pump is made just right it will leak at joints or valves.

"Aremacdee" pumps do not give dealers who sell them trouble and loss from defective service in "Aremacdee" pumps sold customers.

Pumps for every use—hand or motor—force or lift—every type a dealer can sell.

All in the big catalogue. Ask for it—for dealer prices—for dealer terms.

Does Your Mind Ever Feel Sluggish?

There are hundreds of patent medicines which claim to cure the sluggish mind.

It has been discovered by hundreds who are susceptive to this trouble, that the most successful and permanent cure is to join the sales force of MACLEAN'S MAGAZINE, and take subscriptions for this great monthly.

It gives relaxation from your regular routine of work. It is healthful, pleasant and educative. It develops you physically and mentally.

Hundreds of men and women are to-day earning $10.00, $12.00 and $15.00 per week during their spare hours, by taking subscriptions for MACLEAN'S MAGAZINE, who a year ago, some only six months ago, were wasting their valuable spare hours doing nothing.

Work never killed any man.

Taking subscriptions for MACLEAN'S MAGAZINE is pleasant, healthful work and pays you better than you think.

Join our organization now. Do not put off writing for full information to

Don't make the mistake of selling a cheap arm to a man who can afford to buy a more expensive one

It pays you to sell the "ROSS 280" High Velocity.

Not only is it the best sporting rifle made, but the retailing price is $70.00 and it is a sale worth making.

Moreover, any man fortunate enough to own a Ross High Velocity is sure to be proud of it and it will prove itself a walking advertisement for your store

ROSS RIFLE CO. QUEBEC

PAT. FEB. 2, 1909

ROBERTSON SOCKET HEAD
WOOD SCREWS

Have a decided advantage over other styles of wood screws. By having a square hole, into the centre of which a specially designed screwdriver fits snugly, it does away with all possibility of slipping, which often proves disastrous to the screw, and wastes a considerable amount of the workman's time.

They will sell on sight—get our prices at once.

We also manufacture high-grade Hand Drivers, Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails and Wire.

NICHOLSON-MADE FILES

Never Vary in Quality and Temper

This unvarying quality and temper is due to the specially made steel, special machinery, special methods and the work of wide experienced workmen.

Stock a few at once and display them in your window. This, together with our advertising, is sure to bring many buyers your way.

These files are made to meet every requirement and have service giving qualities that are sure to make them a very profitable line to handle.

Write for full particulars.

Nicholson-Made Brands manufactured in Canada are:—

AMERICAN, ARCADE, GREAT WESTERN, GLOBE, EAGLE, McCLELLAN, KEARNEY & FOOT, J. B. SMITH.

Big Ben Store Helps

In order to enable Canadian dealers to get the maximum benefit from the Big Ben campaign now running in Canadian magazines, we are packing Big Ben specially for Canadian trade, six in a carton with a full set of store selling helps (two posters, two show cards, two metal signs.)

On an order for 12 we add a solid mahogany display stand. On an order for 24 or more, we print your name on dials, give the posters, display stand, and a beautiful metal sign lithographed in five colors.

Big Ben and his selling helps are being carried in stock by 54 wholesale Canadian distributors. We will be glad to let you have their names upon request. Any will tell you Big Ben is the best made and the best selling alarm that's ever been put out.

In broken and dozen lots, $2.15 less 2%. In lots of 24, $2.05 less 2%.

The Western Clock Co., La Salle, Ill.

Join the Order of

Eeh-Nis-Kim

Be a good Indian—be a promoter of good fellowship among hardwaremen. Every dealer and salesman who handles **CARBORUNDUM SHARPENING STONES** is eligible to become a brave in the great tribe. Write for an Application Blank. Make your plans now to spend your outing at the big Indian camp on the banks of the Niagara, July and August. It will be a heap big time. A postal to the Great Sachem will bring the details.

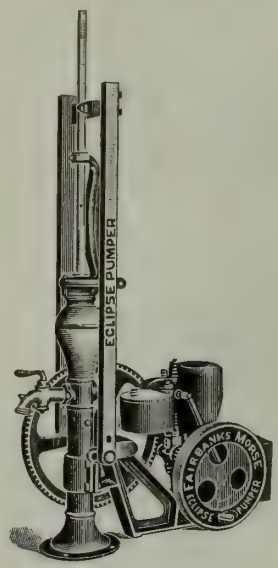
Be sure you have a complete stock of Carborundum Goods, the demand is growing every day.

The Carborundum Co., NIAGARA FALLS, N.Y.

THE LIGHTNING AND BLIZZARD

FREEZERS

stand ready to serve you in the same satisfactory manner in which they have served both trade and consumer for over a quarter of a century. The construction is of the same high class. They run easy, freeze quickly and take the smallest amount of ice and salt of any freezer made. The extensive advertising from season to season has created a permanent demand. They bring trade and help you keep it.



Better let your Jobber quote at once.

NORTH BROS. MFG. CO.

Philadelphia, Pa.

More Water for Less Money

¶ Would you pump water from a deep well for two cents per hour? That's what the "ECLIPSE PUMPER" does right along. Neither does its usefulness end there. The engine is easily disconnected from the pump and is all ready to turn the cream separator, run your grindstone or grind your feed, etc. The "ECLIPSE PUMPER" is a practical, guaranteed "Fairbanks-Morse Engine."

Every hardware dealer should carry them; and a letter to our nearest branch will bring you our catalogs and our special terms to agents.

Letting The Buyer Know

Time was when rope was "just rope" to the customer but times long ago changed and for years thousands of satisfied users have demanded

PLYMOUTH ROPE

"The Rope You Can Trust"

Today the most desirable buyers—the permanent customer sort—are seeking out the ***Plymouth Store.*** To help progressive dealers develop more of this permanent class of trade and to make Plymouth stores widely known, we have arranged a practical advertising service, free to Plymouth dealers.

The man on the street, the buyer in office and home, every user of rope in the community can now be reached with the story of "Plymouth" and shown where to buy—at ***your*** store if you wish.

Every dealer is entitled to this service as soon as he places a stock order for Plymouth rope. Further information and name of our nearest distributor furnished upon request.

SPECIAL ANNOUNCEMENT

To All Hardware Merchants and Jobbers

We beg to announce that our Factory in Oakville is now in operation, and that instead of our goods being handled by Wondershine Limited, we have decided to have our own Selling Organization and handle the entire trade ourselves.

Our Cooking Utensils are now ready for the market, **and will be sold to the trade only,** and will be known and largely advertised as

Our trade mark will be as shown here and means an absolute guarantee of every article manufactured by us and should, by any oversight, a defective article reach the consumer, we must ask the dealer to take it back without any hesitation and exchange it or refund the money and we will protect him.

We have a stock of goods on hand and can give immediate shipment in many lines.

Please write to-day for our price list.

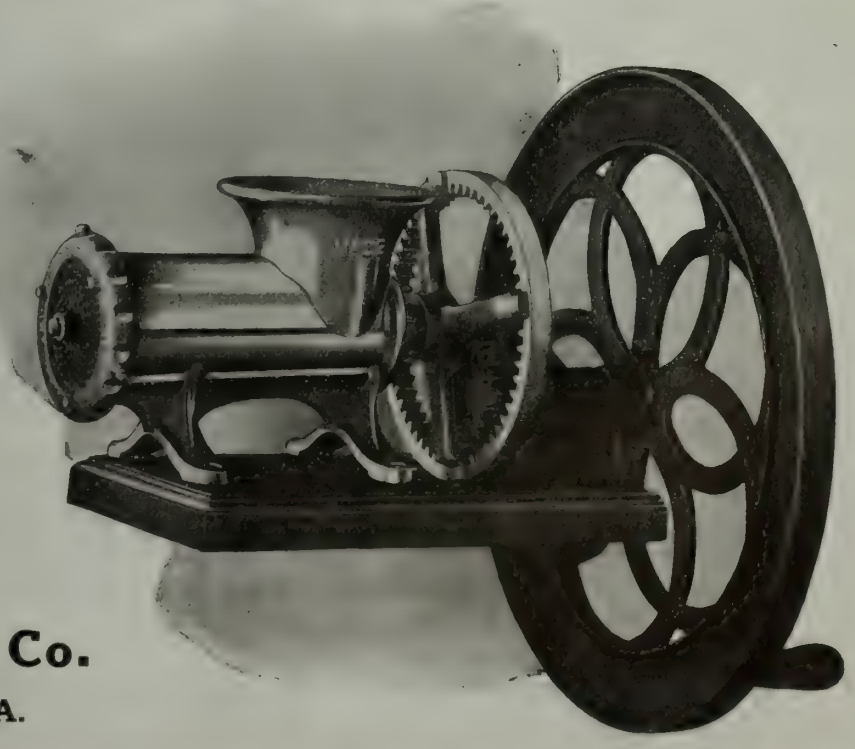
Add This MEAT CHOPPER To Your Stock



You Will Get Splendid RESULTS

Our Eclipse Double Gear Attachment has proved a great improvement on food choppers. It requires about one third as much power as an ordinary hand chopper, and being more compact and durable should last an age, with proper attention. Can be placed in a convenient position for operating, is easy to adjust and separate for cleaning. Constructed of the very best material and expert mechanics.

Display this chopper in your window and you will soon procure excellent results.

Write to-day for catalogue and prices.

We also manufacture **Refrigerator Door Fasteners, Refrigerator Hinges,** and various other articles that are a necessity to the butcher.

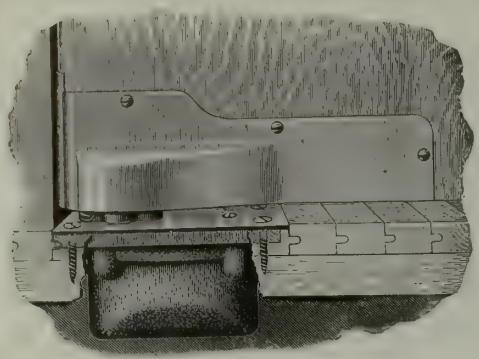
Here is YOUR Chance

to make your range department more profitable and more satisfactory.

"Happy Thought" Ranges

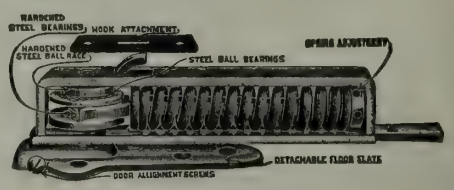
are known from one side of the continent to the other and recommended by every housewife who ever used them.



The **"HAPPY THOUGHT"** works equally well with coal or wood and gives a longer and more reliable service than any other.

This is not a claim, but a fact, and we can prove it.

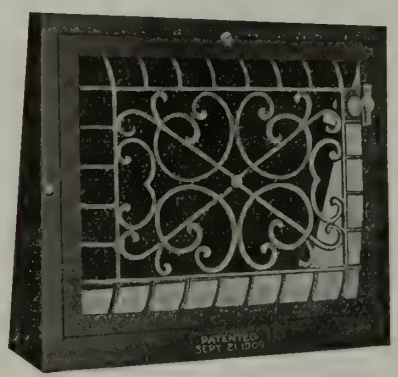
Get a **"HAPPY THOUGHT"** Catalog at once. Each sale brings a good profit.



The William Buck Stove Co., Limited

Calgary Saskatoon Vancouver Brantford Montreal Winnipeg

Standard DOUBLE ACTING SPRING FLOOR HINGES



It is a door check and hinge combined.
It automatically closes the door without a slam.
It prevents children from being knocked down.
It prevents injury to hands if caught when door is closing.
It stops door exactly at center.
It holds door open automatically when desired.
It renders the action of door absolutely noiseless.
It will outwear three of the spring hinges now in common use.

REGULAR KIND

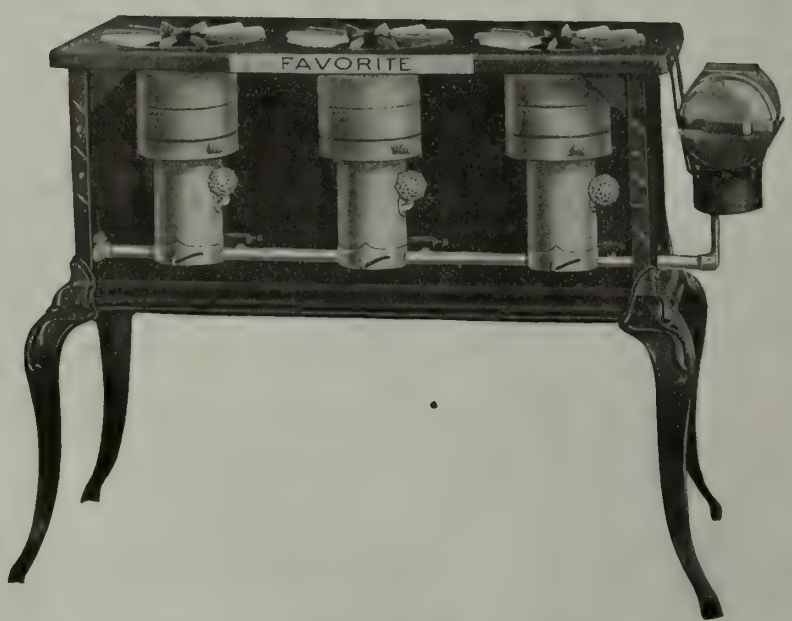
Patented—Canada, February 20, 1912.
" —United States, October 31, 1911.

THE STANDARD MFG. CO., Shelby, Ohio, U.S.A.

"GOOD CHEER" Sidewall Registers

A line in four sizes, of uniform design throughout. Neat and tasteful pattern, and supplied in black japan, ordinary oxidized or full oxidized finish, with enamelled green fan. Our ordinary oxidized will about equal the more expensive full oxidized finish of other makes.

Positive acting fan—stays exactly where set, and when closed locks tight. No springs, etc., to weaken or loosen.



The price? It will pay you to inquire.

The New Preston O. G. Square Bead Eavestroughing

We have always claimed that our eavestroughing was the best on the market, but we have gone ahead and gotten out something that is far superior to our old make. Now we can claim that we can't be beat when it comes to our eavestrough.

Some time ago we advised all the trade that we were manufacturing O. G. Square Bead eavestroughing by machinery which assured absolute uniformity in shape, but it developed that our machinery was not heavy enough to produce as sharp a bead as we desired. We have now perfected and patented automatic steel dies to fit our large power press and we now guarantee a trough superior in shape, appearance and fit to any other on the market.

You can save time and solder in the erection of this eavetrough FOR EVERY PIECE IS EXACTLY THE SAME and fits snug and tight. There are more profits for you and more satisfaction if you use our make. See our special offer below and take advantage of it at once.

Cut out this ad. and mail it to us to-day with your order for 250 feet of our new O. G. S. B. Eavestrough and if it is not exactly as we represent it we will make you a present of it. This offer is good for thirty days.

DISSTON
Quality Tells

There is something in the appearance of a well-finished, high-grade tool which carries to the mind an undefinable feeling of real value---a sense of efficiency and creates a desire for possession.

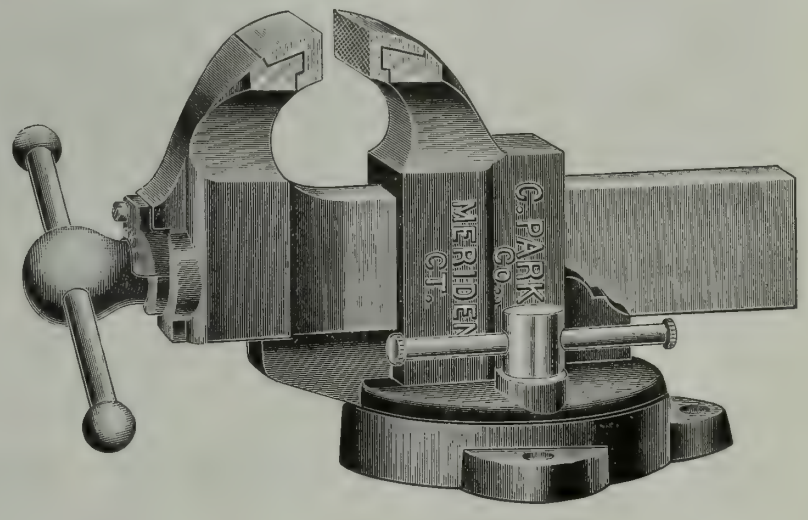
The demand for the DISSTON BRAND Saws, Tools and Files has been steadily increasing since 1840.

HENRY DISSTON & SONS
INCORPORATED
Keystone Saw, Tool, Steel & File Works
PHILADELPHIA, PA.

Not an Enterprise for the "Quitter"

¶ "If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom.

¶ "He must know before he begins it that he must spend money—lots of it.



¶ "Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.

¶ "Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

PARKER'S VISES

NEW ECLIPSE SERIES

Made to supply the demand for a strictly high-grade Vise at a moderate price.

Distinctive Parker Features

First—The steel faces are milled and fitted to the jaws, and are renewable—distinctively "Parker."

Second—The saddle or screw governor, which has been so long recognized as highly important in the working of a vise—distinctively "Parker."

Third—The absolute fit of the jaws—distinctively "Parker."

Fourth—The screw and nut are carefully threaded, and the jaws make immediate response to the action of the screw—distinctively "Parker."

The swiveling device employed on this series is a patented feature, and is operative at any and all points, and is adjustable—that is, can be converted to the use of a left-hand workman. We challenge the world to show a more positive lock, or one more easily operated.

We guarantee this series against breakage caused from any defects in manufacture or materials used.

The ECLIPSE Series is the best value ever offered to the trade, and is the superior of any vise on the market with the exception of "Parker" best quality. Compare it in detail with the best of any other make, and be convinced.

Number	Width of Jaw	Vise Opens	Weight
203-3½	3½ inch.	5 inch.	42 lbs.
204-4	4 "	5 "	58 "
205-4½	4½ "	6½ "	76 "
206-5	5 "	7½ "	104 "

Giving Displays a "Special Appeal"

Window Trims are Effective When They Have a Direct Interest for a Certain Class or Trade—Descriptions of Two Capable "Special Appeal" Windows — The Effectiveness of Publicity Displays Demonstrated.

By L. A. Phaneuf, Moose Jaw.

A business street is one long succession of store fronts, containing displays of goods. People hurry up and down the street, intent on their business, stopping only when they have occasion to do so or when their attention has been forcibly attracted. They look only at the window displays which have unusual attractiveness or which have a "special appeal."

By this I mean a "special appeal" for certain individuals. Some window displays appeal only to a limited class of people, but are very profitable. A display of paperhangers' tools, for instance, will be of interest only to men engaged in that trade, but it will result in many sales. It will be found more effective than a display made up of a great number of goods of all descriptions which will not have a direct appeal for anyone.

Sometimes window trims can be arranged which will appeal to everyone. Such displays, however, are generally of the class which can be termed "publicity windows"—motion devices, comic hardware millinery, and so on. These displays attract everyone, and although they do not in many cases advertise any special line of goods, they advertise the store. Publicity windows are well worth trying.

An Automobile Show.

As an example of what can be done in this line, the accompanying illustration shows a display of hardware automobiles which I arranged this spring. It drew immediate attention. There was a crowd in front of the store all the time and a great amount of discussion around town was created. The display work of arranging it was heavy, but the advertising that the store received more than repaid us for the time and expense involved.

This is the second of a series of articles by practical and successful hardware window dressers. Mr. Phaneuf is in the store of A. Latham, Moose Jaw, and displays shown appeared in the windows of Mr. Latham's store.

Some interesting phases of window dressing are discussed. Other points will be taken up in subsequent issues. —Editor.

It may be interesting to other window dressers to know the articles which entered into the composition of these four different "models."

Construction of Cars.

The car to the left is a "racer." The body was made of a bath tub, baby's size. A bushel measure represents the front, with a grater as machinery. Grindstones were used as wheels, and a door mat represents the back of the seat. The steering wheel is an asbestos mat on a big potato masher. The brakes are pokers and the horn is a funnel and force cup fixed on a pipe. The step is a square tin pan, and the tool box, a small money box. A dairy can was placed at the back to represent the gasoline tank, but this does not show in the picture.

Next in line is a delivery truck. The articles entering into its composition were as follows: Cooler, Humpty Dumpty egg box; lamps, bicycle lamps; wheels, kneading pan lids; windshields, door mat, wire; seat back, a different kind of steel door mat; seat, a cardboard box; carbon box, a round tin of carbide; steps, two round graters and a flat piece of iron; extension at the back, box 2½ by 2, full of wrapped parcels, small boxes and a half-bushel measure.

Car number three is a farmer's automobile, I.H.C. model, and the details are as follows: Wheels, bicycle wheels; front, bread box and coal sieve; horn, cow bell with hammer; windshield, two restaurant toasters; lamps, two Bob lanterns; mud guards, black iron; crank, grindstone's fixture crank; machinery in the bottom, two gasoline cans and axles going though a well bucket 24 inches long by 5 inches in diameter; steering wheel, a small strainer with handle fixed to a long egg beater; seats, bread boxes.

Car number four is a Russell model, made up as follows: Wheels, stove pipe elbows; cooler, a coal stove oven (two burners;) lamps, bicycle lamps; seats, wash boilers, with lids for backs; carbide box, half gallon milk can; mud guards, gun cases (canvas;) steps, bread pan; steering wheel, tin lid fixed to ship auger; brakes; wrenches (not vis-

A display of automobiles made from hardware articles by Mr. Phaneuf.

ible in picture, being on right side of the car.)

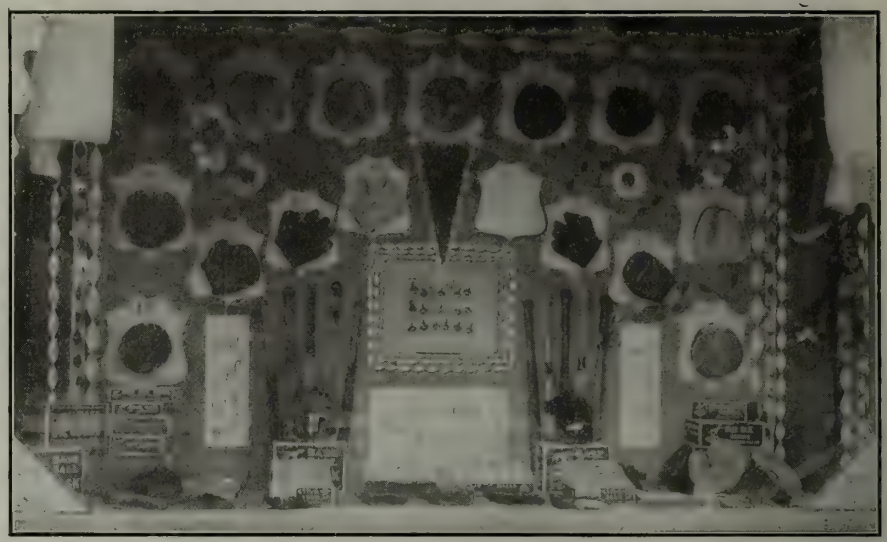
It will be noticed that in hardly any instance was the same article used for any purpose more than once.

Special Appeals.

Of course, window trims of that kind can be arranged only once in awhile. At other times, it is wise to arrange displays which have the "special appeal."

One of the best sellers we have ever had was the display of sporting goods shown in the accompanying illustration. This display was arranged after considerable thought as to what would appeal to the baseball "fan." In the centre a picture was suspended of last year's Moose Jaw team, winners of the Western Canada B. B. League pennant. The banners gave a distinctive touch of color. The background was of dark blue crepe, trimmed with white. The shields were made of common white cardboard.

This display had so distinct an appeal for the baseball enthusiast that it resulted in creating a lot of interest.



Directed to One Trade.

The third illustration shows a window which we used as a direct appeal to men engaged in one trade, blacksmithing. Again I endeavored to give it the "local color" which would appeal to the blacksmith and draw his attention to the display. A picture of a horse (drawn for this display by the window trimmer) made a suitable centre piece. The background was of dark green crepe paper, trimmed with light green.

The results again in this case were eminently satisfactory.

Both of these displays attracted considerable general attraction, but they had a particularly strong attraction for the people interested in the goods featured; the people who were likely to buy the goods.

The expense involved in these window trims was small. The price and show cards were all "home made" and the material used for the backgrounds is quite inexpensive.

A window with a "special appeal" for baseball enthusiasts, trimmed by Mr. Phaneuf.

A window display of blacksmiths' tools, trimmed by Mr. Phaneuf.

WATCH FOR IT.

Next week's issue of Hardware and Metal will contain an article on window dressing written by an Ontario hardwareman, who has a deserved reputation as a window trimmer. Many dealers believe that it is not necessary to pay much attention to store windows in small towns; that it is labor lost, in fact. This article will prove that such is not the case, and that the store window in a small town can be made a valuable asset.

TO BUILD STEAMERS.

At a meeting of the directors of the Canada Cement Company, Limited, held to-day, the Board authorized the secretary to give the following to the press:

The question of the quantity of cement on hand and the difficulties of transportation were gone into.

The official figures show that on June 12th, the Canada Cement Company had on hand 1,085,503 barrels of cement.

On the same date unfilled orders west of the Great Lakes amounted to 149,-214½ barrels, of which quantity 60,707 barrels were in transit.

On the same date the company was short 300 cars and their deliveries at the head of the lakes by boat were 182,-254 barrels less than the company had planned and was prepared to ship, this shortage being caused partly by the late opening of navigation, interruptions of the Cornwall Canal, the slow dispatch steamers have this year been receiving at the terminals and, by water, transportation companies not supplying a sufficient number of steamers.

Having in view the growth of the West and to assist the transportation companies, the board has authorized the building of four steamers for the company's use.

The consumption of cement in Canada for the year 1911 was 6,309,717 barrels. The capacity of the Canada Cement Company's present mills is 10,000,000 barrels per annum, which capacity is being increased as rapidly as the market justifies.

SAVING IN DUTY.

The change in tariff regulations recently put into effect, removes the duty on artificial abrasives. The charge refers only to the raw material and this makes a small saving in duty for manufacturers in this line. The change will not affect trade conditions in regard to abrasives in this country.

Two Million People in Canada Buy Tools

These are Needed in Every Household—They Save Money for the Owner, and Render Him Independent of Workmen, Who May Keep Him Waiting for Some Repair Work—The Great Building Activity Has Stirred up a New Demand for Tools—The Hardwareman's Part.

Roughly speaking, there are two classes of men who require carpenter's tools—carpenters and others. Perhaps some of the very well-to-do, who have chauffeurs, coachmen and valets dancing attendance upon them, may never feel the need of a screwdriver, a saw or a plane—but in Canada the number of these is not large. No, taking it by and large, every man sooner or later requires some tools, and when he does want them, he wants them badly, and wants them at once.

This being so, it will be seen that the number of people to whom tools may be sold is an exceedingly large one. If there are eight millions of people in Canada, one-fifth of these at least are grown men. That means that in the Dominion there are one million six hundred thousand purchasers of tools. One million six hundred thousand prospects. Of a surety the trade of these is worth securing.

No Closed Season for Sales.

There is one time when tools may be sold, and that is all the time. Never is there a closed season. Homes are open the year round. People move in all seasons. They need tools continually; and those who sell these, and who let people know that they have them for sale, are going to reap profits.

But while tools sell always, there are seasons which are better than others, and the present is one of these. Not only are many people in new homes now, but many new homes are being erected. For both tools are needed. It is doubtful if there ever was a new home which was perfect. A warped door sticks, a key won't fit the lock. There are bound to be such imperfections, which will need attention, and tools. Then the new houses in course of construction cause an even greater demand for tools. These new houses mean that many carpenters will be employed, and, where carpenters are working, there tools are selling. A good carpenter wants good tools, and he is going to get them. The dealer who shows such a class of goods gets the sales.

Many New Carpenters.

The present building boom has brought about one state of affairs which is not altogether satisfactory, but which the hardwareman may yet turn to his profit. So many buildings are being constructed that there are not enough thoroughly qualified journeymen to do the work. As a consequence, many who have served no apprenticeship are declaring themselves carpenters. They are not thoroughly competent, perhaps, but they are the best to be had, and contractors are employing them. These men must have tools, and here is the hardwareman's chance. He sells the tools. He sells first class tools, and gets a first class profit.

Mr. Asselin, of Leduc & Asselin, Montreal, expresses the present situation somewhat epigramatically. "Every man who has a saw and a hammer is a carpenter," he remarks.

There is undoubtedly something in this. But the hardwareman need not quarrel with the present situation. His part is to sell the saws and the hammers. If he gets the Jacks-of-all-trades, who are adopting carpentering for the time, to use good tools, he is doing his best to keep up the standard of work.

Householders' Need of Tools.

So much for the carpenters. The other great class — the householders—need carpenters' tools also. They have not any great jobs to rush for contractors, but they have many little repairs to make. They want to make these themselves for three reasons. First they do not have to wait on any man's convenience, but can do the thing at once. "Do it now," is a little more than a motto. It is a great desire which is felt by many, and by none more than the man who discovers some little thing which needs attention about his home.

Costly Labor and Tools.

A man wants to make these repairs himself also because there is inborn in most men a love of tools. A man looks with greater pride on a botch job which he has done himself than on a perfect job, paid for by him, but done by a cabinet maker.

But besides the desire for immediate service and the joy of accomplishment, men like to do repairs for themselves because thus they save money. These be expensive days, and the high cost of living does not all depend upon the cost of food stuff. Labor, too, is dearer, and the man who calls a plumber or a carpenter to his home to make some slight repairs, will find it necessary to pay out a very fair sum.

Where Tools Save Money.

Let a door be warped, so that it will not close—and how often this happens; let a key fail to fit the lock—and this is almost regular thing in a new home. What is needed? Why, a carpenter, some will say. Yes, he may be, but a few good tools would do just as well, and would mean a considerable money saving. A carpenter nowadays is not going to work for much less than 50 cents an hour. Doing such a job he will probably charge more, for it would necessarily mean a trip for him, and only part of a day's work. So two or three dollars will be required to get the work done. The initial cost of the tools needed to accomplish this work would be little if any more. A plane, a chisel—these would about do the work—and once bought they would be on hand for all future emergencies.

Tools Give Independence.

But greater than the money-saving made possible by the possession of a few tools, is the time-saving. This has been called a prodigal age. People are what the Americans call "good spenders"—meaning, of course, that they are free spenders. Many there are who would think little of paying out a few dollars to a carpenter. But they do object when they telephone for these workmen, and then wait hour upon hour for their coming. "These workmen are awfully independent nowadays" people remark. Then, if they think of it, they make themselves independent of the workingman by buying a few tools.

The great mission of the hardwareman is to make people think. He must bring forward his tools if he is to sell many. Carpenters need to be shown new lines to feel the need for these. Men generally need tools brought to their attention. The sight of these make them think of the work which the purchase of a few of these would render possible, and when that thought is once started on its way it ends only with the sale.

Dealers Give Testimony.

Hundreds of dealers have found this to be so. W. H. Smith, of the Central Hardware Company, Ottawa, declares that he can always stir up business in tools by a good window display. A trim in a Guelph hardware store had such an effect that 75 per cent. of the business done upon the Saturday that it was shown, was tools. Mr. Bedard, of Philbin & Co., Montreal, says he has found tools a line which not only sell themselves—if properly displayed—but which help to sell other goods.

This is the season for these goods. They should be given their regular turn in the windows.

THE SUMMER SLUMP MYTH

Although the average business man is devoid of superstition, he still harbors a number of myths, and clings to them with singular tenacity. One of the most conspicuous and most dangerous is the Summer Slump Myth.

The idea has gone abroad that trade falls off during the summer months. Business men have accepted it with a credulity never displayed in regard to other matters. The manufacturer takes it for granted that the merchant will find trade dull and makes little effort to find a market for his goods. The merchant in turn, concludes that people are not going to buy as briskly as at other seasons, and "lets up" in his efforts. When men start to act on a false impression of this kind, they inevitably end up by creating the condition, the existence of which was a pure assumption on their part in the first place. When merchants make no effort to create business, the natural result is that business falls off.

The summer slump is a myth, purely and simply. It is a pernicious myth, for it does damage wherever it is accepted; and, unfortunately, its acceptance is pretty general. Although it is quite true that the summer sees a pretty general exodus to summer resorts and holiday points, statistics show that the number of residents who leave a town never exceeds 10 per cent. of the population at any time; and that is partly made up by the presence of visitors. Further than that, people are just as prone to spend their money during the summer months as at any other season of the year. They spend on pleasures and outings larger amounts than the difference between their regular purchases in summer and in brisker seasons. The merchant could divert a share of that promiscuous expenditure to himself if he would keep his store attractive and advertise regularly.

Another point which is generally lost sight of is that, to slacken efforts in the anticipation of meagre results, is to lose momentum. The athlete must keep in condition at all times whether he expects to have an opportunity to display his prowess or not. And it is the same with trade. The merchant who allows himself to drop out of the public sight finds it hard to get back again. He has lost momentum.

THE HARDWAREMAN AND WOMEN

There is an old French proverb which runs somewhat as follows: "Ce que femme veut, Dieu Veut." Meaning, of course, in the English with which the great majority of Canadians are more familiar, that what woman wishes God wishes. The saying is a lofty one, and doubtless more nearly true than it would be if referring to men. Certainly the proverb lays stress upon the importance of the women, and in this way gives food for thought to the hardwareman.

It is only of late that dealers have come to realize that they must appeal to women if they are to make the best of their opportunities. Perhaps Hardwaremen have been slower to recognize this than have merchants in other lines. They have continued to do a large business with the men—and always will continue so to do. They have not felt the falling off in men's buying, as have the other dealers; yet if they look about they must recognize that the great retail buyers of to-day are the women. The men are the earners, the women the distributors.

And this being so it is very evident that the hardware store should be made attractive to women. There should be no overlooking the men; but some attention can also be given the women. The many specialties now on the market make it more and more possible to interest them in the hardware store. Bring them in to buy some little thing and they will come later when they want something more costly. They will speak of the store to their husbands, and when these want a tool or a lawn mower they will likely go where their wives have gone. Undoubtedly, women have great influence, as well as great purchasing power, and it pays the hardwareman to get the benefit of both.

WORKING ON A SYSTEM

System is the secret of commercial efficiency.

The man who tries to "play the races" on a system finally gives up the task a wiser and a sadder man, but this is the single exception to prove the rule that everything must be done on a system if best results are desired. The biggest business organizations are nothing but marvellous systems into which each member of the organization fits, in his own particular niche. System governs nations, builds railroads and controls trade.

The man who does his work systematically and thoroughly (the two are almost synonymous terms) even though he may lack the brilliancy of his competitor, will win out if the latter combines inconsistency with his brilliancy and works on a haphazard plan.

System is needed in the handling of every branch of the retail business. In this issue an article appears outlining the methods which one hardwareman pursues in handling his advertising. He has a system of his own, which he adheres to closely with best results. What has been done in this instance is possible in every branch of business. The dealer must have a definite plan to follow.

HATS OFF TO CANADA

Perhaps at this time, when from Halifax to Vancouver is being celebrated Dominion Day, it may be pardonable to express pleasure at the mere fact of being Canadian. The Dominion is young, like the people living in it. Both land and people are unimpoverished; and for the people there is freedom of the best sort.

Comparisons, is is said, are always odious—that is to one side. Yet there are those who see fit to make comparisons just now. In the land to the south—and a great land it is—they see signs of disorder—of man turned

against man. There is an election coming, and the business of the nation is made to suffer.

But a few months ago there was an election in Canada —an election which all agreed was of great moment. Canada, some held, was at the parting of the ways. But the vote made little disturbance in business. The fateful day came and went, and business continued on the even tenor of its way.

Perhaps the Canadian people are less quick to move. Perhaps they have not been accustomed to stampedes every four years. However, that may be Canada is a good place to live in. It is good for manufacturers and business generally, and what is good for business is good for the people at large.

POINTED EDITORIALS

Hurrah for the electric fan, may it long revolve!

* * *

The fly multiplies fast, and man's swatting availeth little. Nevertheless, keep on swatting.

* * *

Have a system for everything but playing the races. As no sane man ever plays the races, have a system for everything.

* * *

The hardware dealer can sell plenty of goods during the summer if he goes about it the right way, and features the right goods.

* * *

It is said that the fly cannot live at an altitude greater than 40 feet. Those of us who work above this level will wish the flies were all aware of this.

* * *

They say that a woman is happy with a $50 wrap over her shoulders and a street car ticket tied up in the corner of her handkerchief. Yet the women are the big buyers of to-day.

* * *

Those orchards which have been sprayed with insecticides give promise of a fine fruit yield. Those which have been neglected are stripped of their leaves. The conclusion is obvious.

* * *

This weather brings the fly to the front, so the hardwaremen might well bring the window screens to the front.

* * *

The line of demarcation between the "stand-patter" and the "progressive" is closely drawn in other spheres as well as in American politics. There are "progressives" and "reactionaries" in the retail buisness. Which class do you belong to?

* * *

The fly and his second cousin, the mosquito, have many enemies and no friends. Nevertheless, they serve some useful purposes. Without the fiy and the mosquito, the hardwareman wouldn't sell as many window screens.

* * *

A German economist predicts a financial crisis somewhere between 1914 and 1917. It seems inevitable for "black" years to arrive at more or less regular intervals, but their recurrence could be prevented if financial and commercial interests combined to alleviate the conditions which make panics possible.

Gaining Daylight

IF there is anything in the old saying that "early to bed and early to rise, makes a man healthy, wealthy and wise," the people of Orillia, Ontario, should soon be enjoying health, wealth and wisdom unbounded. Beginning with this week, the native Orillians will go to bed an hour earlier and get up an hour ahead of the people in other parts of the country. They will have their meals an hour earlier, go to work that much ahead and quit with the same margin of time in their favor. The explanation of this state of affairs is that they are putting the clock an hour ahead.

The "Daylight Savings" bill, introduced into the British House of Commons, was not adopted, probably for the reason that John Bull has an ingrained dislike to making changes. He likes to think a long time over any measure which may upset some of his time-honored traditions or disturb the calm of established order with the turmoil of controversy. Now, the Daylight Savings Bill looked a little freakish, and—well, not exactly socialistic, but certainly very radical. To talk of changing the whole daily routine by which John Bull has directed his movements for so long, to get up an hour earlier, eat meals on the same advanced schedule and turn the day topsy-turvey generally; the idea rather upset him, and he discretly adopted, what a certain well-known Canadian statesman was wont to term "the masterly policy of inactivity." The nation did not seem to sense the truth that the day's work would not be disturbed in any sense of the word except that, on the occasion of the inauguration of the system, an hour would be lost.

The experiment at Orillia will be watched with close interest. The Orillians will rise when the people in neighboring towns are still asleep, go to work about the time that the benighted remainder of the country's population are beginning to think it time to roll out, and quit for the day with an hour's extra daylight ahead of them for recreation. It means that in Orillia the sun will go down when the clock points to 9 o'clock, instead of at 8. It means that there will be plenty of time for baseball and lacrosse games after supper.

The idea is full of possibilities for the retail merchant. The average storekeeper to-day knows little of the delights of recreation during the hours of daylight. The hardest worked of men, be sticks behind his desk or counter from early morning until 9 at night. When he finally does issue forth from his store, the daylight has gone.

If the daylight saving plan were to be generally adopted, the storekeeper would close up with the best part of the evening still ahead of him. He would still be able to remain open for the evening trade, and not sacrifice his leisure hours entirely to the dictates of business. Trade should not be interfered with in any degree. On the whole, the scheme looks to be one which the retail merchant should heartily support.

Advertising on a Well Defined Basis

The Retailer Should Have a Certain Policy and a Regular Routine to Conform to—The Use of Cuts and Prices Strongly Advised — Results Can be Traced Through Systematic Advertising.

By M. Canfield, Manager for J. R. Myers, Stratford.

SUMMED UP.

Advertise consistently and regularly.

Plan out your work ahead of time.

Do not crowd too much matter into the space. Make descriptions brief.

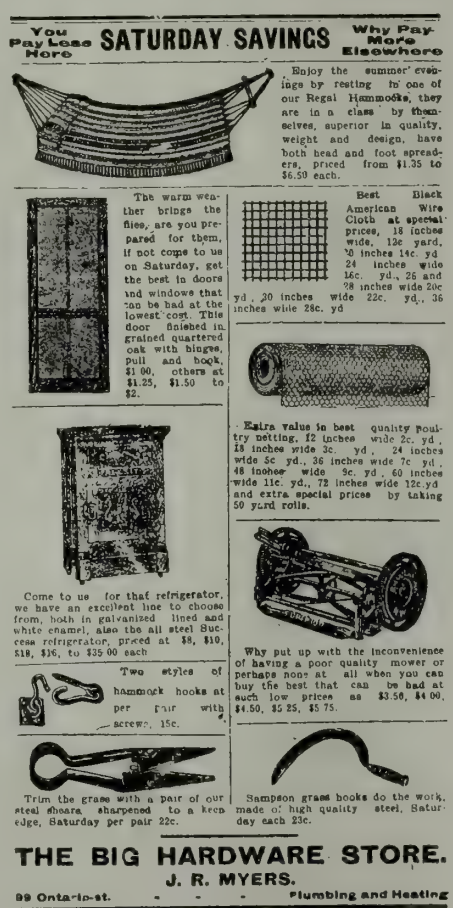
Use cuts always and quote the price of every article.

Advertising must be conducted on a well defined system.

Everything should be done in accordance with a fixed plan. The advertiser must know how much he is going to spend, how and when he is going to spend it, the style of advertising he intends to follow, how and when his copy it to be prepared and so on. It is only by such means that the best results can be obtained.

The advertising end of a progressive business is certainly a great study. I have never met two men who held the same views exactly on the problems of retail publicity but all business men—that is, all who are making a success of their business—admit that they must advertise in order to keep up with the times. The need of a definite policy and system is also generally conceded.

The system we have adopted here is based on close observation and study of results. We use a fifteen-inch space in the two local daily papers three times a week and in the weekly editions also. Monday, Wednesday and Saturday are the days usually chosen. The Monday and Wednesday issues are used for what might be termed general advertising. Seasonable goods are featured. The "Saturday Savings" idea is followed out in our Saturday advertisements. I do not stick to seasonable goods only in preparing the Saturday copy but often select articles, which promise to meet with a ready sale. As the advertisements appear simultaneously in the two newspapers, different copy with different cuts are used in each. This plan has this advantage. Many people take both papers and many more see both, so that they find a double array of articles advertised.



Preparing the Copy.

My plan for the preparation of copy is to get to work at the beginning of the week and map out what articles are to be advertised in each ad. . I go over the complete list of seasonable goods and pick out the lines to be featured. I also keep a close watch on the stock and endeavor to keep all lines moving. If certain goods are selling slowly, we advertise them and generally succeed in stirring up a demand. Articles of this latter class are used in our "Saturday Savings" advertisement.

By following this system, copy is always ready well ahead of time. There is no rush at the last moment. It is not possible to turn out consistently forceful copy unless sufficient time is given to the work. Thus the advertiser who works on a system is more likely to prepare effective ads. than the man who has no system whatever. The former is sure to have plenty of time to carefully plan out everything. The latter may turn out good advertisements sometimes but his work will not be consistent.

Not Too Long.

In my opinion, it is poor policy to have too much reading matter. Brevity

A recent ad. prepared by Mr. Canfield.

is the soul of advertising. There are few people who, in glancing over a paper, will take the time to read a lengthy advertisement right through. They will hunt for the facts and leave the rest unread. The advertiser has, therefore, just wasted the space which he devoted to lengthy descriptions and airy bombast. The best way is to fill the space with facts with just sufficient leavening of description to chain the attention and create an interest.

In the advertisements which we use on Mondays and Wednesdays, I explain the articles more fully than I do in the in the "Saturday Savings." In the latter, descriptions are "cut to the bone." I talk quality, first, last and always.

Always Gives Price.

One of the first rules to my mind, is to name the price of every article. Some may disagree with me on this point but experience with us has been that an advertisement without prices is practically worthless.

Now we come to the question of price inducements. We certainly do not believe in doing business for nothing and have never found it necessary to cut a price so low that there would be nothing in it. Still, we have found that shading the price a few cents is a mighty inducement People look for bargains nowadays and a reduction , no matter how small, appeals to them. We find that the business we do on the goods advertised more than makes up for the difference in the price.

More than that, we make many sales of a better quality article than the one advertised. People see the ad. and come to the store to buy a certain article. We show them something better at a higher price and demonstrate the superior qualities. We hammer the quality argument home and in a great many cases, the reduction merely serves as the stepping stone to the sale of a higher priced article People often come in to buy something they have seen in our ad.—a sickle, say, at 22 cents. They buy it and then we get them interested in other goods and secure additional sales.

Use Illustrations.

An advertisement without cuts showing the goods is in the same class as one without prices. Illustrations are the life of an advertisement. The eye is arrested by them more surely than by any

other means. We illustrate every article that we advertise.

Tracing Results.

When your advertising is done on a thoroughly systematic basis, it is possible to trace results. When a merchant uses the newspapers at irregular intervals, he may complain that he has not received results. The trouble is that he has no way of tracing them. But when you advertise regularly and consistently, the results soon show. It is a common occurrence to have people telephone us for articles they have seen in the paper or come to the store and ask to see the line; rather, it is a regular occurrence. Sometimes they come in with the article cut from the paper, or send in a child with the clipping. Further than that, we can tell by the stimulation in sales of goods which we have been featuring that our publicity campaign has been doing the work we had hoped for.

Price Problems---2. Cheapness of Stoves

The statement is made very frequently that hardware has not advanced as rapidly as other goods of late years, and certainly not in proportion to the increased cost of raw material and manufacture. This claim is borne out in some hardware lines at least.

Consider the stove. To-day the householder pays about twice as much for his food as he did twenty years ago. The beefsteak which once cost 12 cents, is now purchased for 24 or 27 cents. Chickens which graced every table more or less for Sunday dinner at the price of 40 cents a pair, are now bought by the well-to-do only at twenty cents a pound. It's the same all through the scale of foods. Necessities sell to-day at luxury prices, and luxuries have gone out of sight. But the price of the article, which serves to prepare the food, the stove, has not changed very materially. True, stoves cost more to-day than they did twenty years ago, but the advance does not exceed 20 per cent. in most lines. In many it is less.

Twenty years ago a good range could be bought for from $35 to $40, retail price. A range of corresponding grade sells to-day for about $47 to $50. The same ratio holds good pretty much all through. On some lines the advance has been very small. Box stoves, for instance, have not changed very much in price. There is not a very heavy call for them, and the models have not changed to any considerable extent. It costs a good deal more to turn them out now, however, and the price asked is only nominally larger than a couple of decades ago.

Great Improvements Made.

The advance in the price of stoves does not cover the improvements which have been effected, let alone the increased cost of manufacture.

The coal range to-day compared with that of twenty years ago is a vastly different article. It has been improved in every respect. The general plan has been changed, economical features have been introduced, experience has corrected old faults. The products of the foundries have been slowly improving year after year until the range of to-day, while probably not yet perfect, has many features about it which makes it very much more valuable than the article which was made twenty years ago.

The enumeration of a few details will demonstrate this truth. The old-time range had a certain amount of nickeled parts, but not nearly as much as the range turned out to-day—and that represents a big margin in the cost of production. The top castings were milled, but were finished with one process. As a result they were serviceable, but rough. To-day the lids and top castings are put through three processes, which result in the production of a material as smooth almost as glass and with the hardness of steel. Steel sheets in the old stoves were placed together, bolted and riveted. To-day this is done and a cement is added as well, which makes the joints perfectly solid. Ovens are made of steel and lined with asbestos.

Countless other improvements have been made, but the finished article costs the consumer only a few dollars more than it did twenty years ago.

The Cost of Manufacture.

The increase in manufacturing costs has been even more marked. Wages have advanced variously, but with consistent rapidity. It is probable that the average wage paid to the employe of the stove manufacturer to-day is 50 per cent. more. The cost of labor on some parts of the stove is easily twice as large as it was less than twenty years ago.

Other expenses have gone up by leaps and bounds. Factory maintenance costs more. Marketing the goods represents a much heavier charge than was formerly the case.

The raw material costs more, but not in the same proportion, perhaps. The pig iron used twenty years ago was imported largely from the Old Country. To-day the bulk is secured in Canada, and this has reduced transportation charges, so that the manufacturer pays not a great deal more for his iron than he did.

Get Better Value.

Taking it all in all, it is quite apparent that the purchaser of a stove to-day gets better value for his money than he did years ago. He pays a few dollars more, but he gets an article with the very latest improvements, which has cost probably 50 per cent. more to turn out than did the old-time stove.

This is a point which retailers should bear in mind. It is not an uncommon occurrence to have customers complain that "stoves cost too much nowadays." People grumble that "prices are away up." Give them the facts. They will then realize that, considering the shrinkage in the purchasing power of the dollar, they are getting a much cheaper stove than they did years ago.

—⚙—

VISITORS THROW OUT HINTS.

Montreal.—Postponing the careful inspection of the factories and large industrial concerns until their return, the British manufacturers now touring Canada gave their attention to having a good time when they were in Montreal last Saturday. The visitors were received by His Royal Highness the Duke of Connaught. In carriages they were driven about the city. They were received by the Mayor and City Controllers. They were guests at a luncheon, and later at the lacrosse game played at the M.A.A.A. ground.

While there was little speaking at the luncheon, one or two significant things were said by those called upon by Mayor Lavallee and Mr. Vickers, of the British Vickers & Maxim firm, who acted as joint toastmasters.

Perhaps most significant was the remark of Mr. George Mason in proposing "The City of Montreal:" "We have come here," he said, "because we want to know you better and trade with you more. Not that we want to interfere with your Canadian interests and ambitions; but we have what you need —capital and labor—and as a result of this visit I hope we shall see more of both coming to Canada."

The Loss Which Slow Service Brings

People Who Are in a Hurry Become Annoyed When They Are Forced to Wait —Where Generous Treatment of Clerks Meant Hardship to Customers—A Sample Example—Even a Clerk Trying to do His Best May Make a Mistake.

Not long ago a well known and highly esteemed Toronto Divine publicly expressed his gladness that he was near the end of his days, because, as he said, he feared what the continual rush would bring people to. Many, unlike this minister, like the rush. They revel in it, and for a holiday, go to some place where the pace is even greater. But whether people like the rapid rate at which the world is moving, or whether they deplore it, none will deny the fact. Every one is in a hurry now-a-days. Even the hearses in the larger cities go on the run.

Where people are in a hurry, people are going to demand one thing above all others—prompt service. They have an appointment to keep, perhaps, and cannot afford to be delayed. If they enter a store for an article, and cannot get it at once, they will probably leave unserved. A humorist has remarked that there are only three classes of people on the American continent: Those who think they are in a hurry. Those who really are—and clerks. There is in this just the grain of truth which make so many facetious sayings worthy of consideration. Undoubtedly most people really are, or think they are, exceedingly busy; and equally undoubtedly there are clerks who dilly-dally, waiting on one customer where they might serve half a dozen.

Dealers Themselves Offend.

But the clerks are not the only offenders. Experience has shown that dealers themselves are responsible for much of the delay which is so disconcerting to customers. Dealers should make prompt service one of their great aims. It will draw people to their store as few other things will; yet dealers there are who either themselves cause delay, or who permit their clerks to do this.

Exactly what is meant may perhaps be best brought out by quoting two or three examples. True, examples they are, though the names of the dealers are not given. The pity is that instances are so very easy to find.

Recently the writer was in a hardware store in Ottawa. There were three clerks in the place, and the owner waited on people himself, when this was necessary. Indeed he was the best of the four.

Twelve O'clock Starts Trouble.

Several customers came in and were attended to promptly. Then the Twelve o'clock whistles began to blow. Without a moment's pause, two of the clerks walked into the dressing room, picked up their hats, and started for home. They were going for lunch, as was afterwards learned, the arrangement being that two should go from twelve to one, while the merchant himself, and one of the clerks, remained to wait upon all who should come to make a purchase.

Now, note what happened, and let it be remarked again that this is merely a report of an actual occurrence—doubtless one which had taken place many times before, and which may take place many times again.

The dealer—an exceedingly likeable man—has built up a large business with small contractors. These men are beginners in the business. They have not yet reached the position where they can simply oversee their work. They help with the building themselves. As a result their buying time is limited. Noon is one of the fine hours for this branch of their business.

Seven Customers—Two Clerks.

On the particular day in question, no less than four of these men entered the store within ten or fifteen minutes of one another. Another man came in with a broken lock which he had promised his wife he would get fixed at the noon hour. A woman wanted one of these little contrivances which enable soap to be dissolved rapidly in water for dish-washing. A small boy was there for a pound of nails.

Seven of them there were, all at the one time and the efforts of the dealer and his clerk to serve all would have been amusing had it not had a distressing side.

The clerk got the woman what she wanted, and then procured the nails for the boy. But this was not done in five minutes. The lady knew just what she was after. That was quickly given her, but she paused to talk about it. The clerk had to listen.

All Kept Waiting.

While he was doing this the dealer himself was trying to satisfy the four contractors, and the man with the broken lock. He told one contractor that he thought he had twenty bags of cement which he would let him have. Another he promised to give builders' hardware. Then he took the lock and started to see what was the matter with it. To the credit of the dealer be it said he mended that broken old fastener. But it took ten minutes, and the contractors were waiting for definite word. That they did not leave and make their purchases elsewhere may be attributed to the dealer's personal popularity. But they did not enjoy the wait. They were among the "really busy." Some of them wanted to get to their dinners, and others were anxious to get back to work.

To make things agreeable for his clerks the dealer was sacrificing the comfort of his customers. It would have been better for him to give his clerks an hour and a half starting at 1 o'clock, rather than an hour starting at twelve. The clerks would readily have seen his position and would have stayed for the twelve to one rush, but apparently the dealer did not like to ask them. He let his customers suffer delay instead.

Reputation for Slow Service.

In Montreal there is a hardware store which is numbered among the best in the city; but it has a reputation, an unenviable reputation for slow service. Only the other day a young man complained in this manner:

"I went there for a plane to-day," he said. "I picked one out all right and then the clerk said it was the sample. I had seen, and that he would send up stairs and get a duplicate out of stock. He went off. I saw him talk to one or two customers for a moment, then while he was waiting for the plane to come down the basket contrivance they have, he started talking to another clerk. I must have waited ten minutes. Any way I know I was sore and I won't go there again."

Another true instance this, and the remarks of the young man are about those which would come from many others. People, to-day, hate to be kept waiting. They want what they want when they want it.

Still Another Case in Point.

Another instance which comes to mind is that of bad salesmanship rather than bad system. Entering another Montreal store an elderly man expressed a desire for a chisel. Evidently he was a carpenter, for he made a minute examination of each pattern shown him, testing its edge and asking some questions. The clerk turned from him on several occasions, speaking to another customer and going after something for him. After a few moments the customer who was second was getting more of the clerk's at-

(Continued on page 41)

Keeping Open Nights Meant Less Efficiency

A Dealer of Eastern Ontario Found This to be the Case, and so Determined to Close—The Change Has Proved Beneficial, Not Only in the Store, But in the Tinshop—Farmers Objected at First,But Were Led to See Reason—Trouble Came From an Unexpected Source—Members of Labor Unions Proved the Ones Who Wanted Other People to Have Long Hours.

Among the things which militate against efficiency in the hardware store must be noted the tendency to keep open at nights. In cities this is little done—except, of course, at such special seasons as Christmas—but in the towns many stores make it a practice to keep open at least three or four nights in the week. Some dealers think they gain business in this way. Others claim that there is no real benefit, but that the volume of business, instead of being confined to the hours between seven in the morning and six at night, is spread over a wider stretch—sometimes far into the night.

Probably at one time or another every dealer in the small city or town has kept open in the evenings. But a change is coming about. Merchants are now opposing such a system. They are arranging to have their business hours shorter.

Reduce Staff's Efficiency.

A certain Eastern Ontario dealer is one of those who has become thoroughly sickened with the old practice of keeping open every evening. It was not only that he objected to being thus confined, but he discovered that the long hours were reducing the efficiency of his staff.

"Yes," said the dealer, speaking on this subject, "I used to keep open until 9.30 at night. We would not all be here every evening, but it meant working nights several times in the week, and I began to see that this was having a poor effect. After a night's work the clerks would come down in the morning without much ginger. They did not seem to have the joy in their work that they should have, and that they have now.

Changed in Tinshop, Too.

"It was this which led me to change, and when we decided to change we decided to have a change in the tinshop as well as the store. There the men had been working overtime regularly. They did not object to this, since they got overtime for every extra hour worked. Nevertheless, this continual extra work was reducing their efficiency. I began to see that. Why, now, working from 7 a.m. until 6 p.m., we do as much as we used to working those hours, and then from 7.15 to 9.15 at night.

"Of course, you will understand that there are times when work has to be rushed. Then we ask the tinsmiths to come back in the evening. They are quite willing to do this, too, and when they do come back they accomplish a lot, for their efficiency has not been reduced by continual long hours."

How About the Farmers?

There are those who believe they would lose the custom of the farmers if they gave up keeping open nights. Listen to what this dealer has to say on this subject, as the result of his experience:

"The farmers did complain when we first made the change," he remarked in reply to a query. "They thought we should be ready to stay open any length of time for their accommodation. But we simply told them that we could not do this. One man objected violently, but I pointed out that he was willing to leave his work in time to drive in to town and get his mail, and that he could leave his work to get his hardware just as well.

In Cases of Emergency.

"Of course," continued the dealer, "there may be accidents happen on the farm. A binder may break. Something may go wrong with a windmill or a pump. There are a number of such possibilities. Now, it might be a hardship to a farmer if he could not get the parts needed to make repairs promptly. I have told my customers from the farm that they can come to the house in any such emergency and I'll get them what they need. This is not a very large place. All the farmers know where I live, and where some of the boys live, too. They know that we won't see them stuck. But they know, too, that we won't stay open every night in the week any more. That doesn't only mean the loss of time at home, but I have found it to mean the loss of good business energy."

It might be thought that the farmers would be the ones who would take the greatest exception to the early closing decision. In this instance, however, such has not proved to be the case. The greatest objection has come from the mechanics.

Everything Organized.

"This town," said the dealer, "is a hive for labor unions. Everything is organized. These men combine to ask better hours of their employers, and yet they have been the worst in the locality for late buying. Some of them have complained to me that my hardware store was closed when they went home at nights.

"The head of one of these unions objected to my closing up at nights," said the dealer. "I told him why I had done this, and he agreed it was reasonable. But the very next Saturday night this man came into the store shortly after 10 o'clock—we still keep open Saturday night, you know. Well, he examined a new line of tools, and bought several. He delayed, and was still there at 11 o'clock. That man is a good buyer. As a matter of fact so are all these mechanics, but I thought I would put the case to him.

Carrying War Into Africa.

" 'Now,' I said, 'what would you say if the railway wanted you to work overtime without any extra pay?'

"The man thought, and then admitted he would object.

" 'Well,' I said, 'that is what you are asking us to do. You have been downtown all night, but just come in here as we are on the point of closing up. You've kept us all at it an hour longer than we should be.' "

The man, according to the dealer, seemed to see the force of the argument. Perhaps he mentioned it to his fellows. In any case, the late buying has largely stopped. Not the buying, mind you. These men did not take offence. They were fair-minded enough to see the force of the dealer's argument. And that, it appears, is the way shoppers in all districts would regard the determination to close at six or seven

—⚙—

TO ERECT NEW FACTORY.

The Duff Manufacturing Co., of Pittsburg, Pa., manufacturers of Barrett Lifting Jacks, have purchased five acres of ground on Preble Ave., Northside, Pittsburg, on the lines of the Pennsylvania and B & O. Railroads, and will start at once the erection of a new factory, which will be the largest in the world devoted exclusively to the manufacture of lifting jacks. The new site of the Duff Manufacturing Company's factory, and the new site of the Pittsburg Screw and Bolt Co., occupy the Riter Conley Company's property and adjacent acreage, totaling about 12 acres

Complete Course of Sheet Metal Work

By L. W. KOSER

Prob. 20, plate 20, gives the development of a handle some time used on coal scuttles, etc. The principle of developing is the same as the gore piece of a three-piece elbow and needs no further explanation than that shown by the drawing.

Prob. 21 shows the development of a scale scoop.

Fig. 1 represents the scoop. The curved line ABC is drawn as explained for prob. 16.

Carry a light or dotted line horizontally from B and intersect this at S by a line extended from AD.

At any convenient place lay out the long horizontal line PR.

Set the space SB of Fig. 1 on this line, as shown by PY, Fig. 3.

Drop a vertical line YM, making it vertical to BD of Fig. 1, and carry a line from M to the point P.

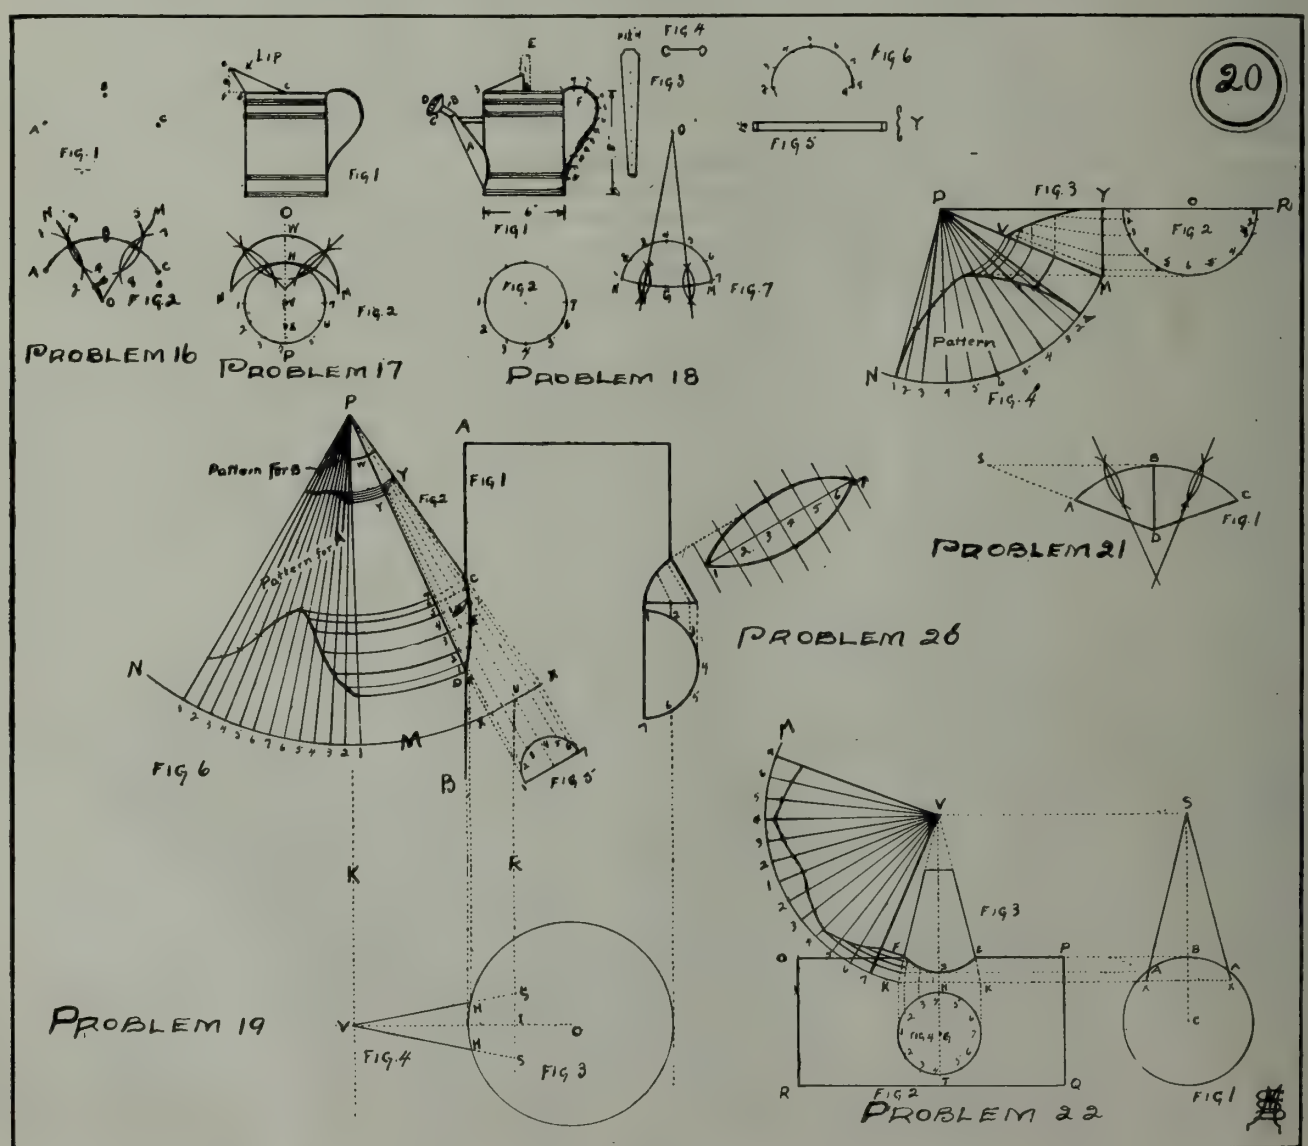
Draw in this space ½ of the scoop, as shown by the line VY.

With any convenient point on the line PR for centre, as O, and with a radius equal to BD of Fig. 1, draw the circle Fig. 2.

Divide this off into equal spaces, and subdivide the top parts, making them about one-half the width of the others, the reason for this being that the greater slant of the pattern is at the sides, and consequently the spaces require to be closer together. The same result is arrived at by dividing the circle into smaller spaces, but this makes more lines to handle in developing the pattern.

Having divided the spaces and numbered same, we will now carry horizontal lines to the vertical line YM, and from thence toward the point P, until they meet the profile line VY; then drop them vertically to the slant line PM.

Set the point of the compass at P, and the lead at M, and describe the arc NM, on which lay off the stretchout of Fig. 2, at the same as it is spaced thereon.



Draw lines into the centre P, with P as a centre, swing an arc from the points on the line PM, and the pattern will be developed. Allow for flanges.

Prob. 22 represents a cone, joining a large pipe.

Fig. 1 is first drawn to find how far the sides of the cone come down on the sides of the pipe. Then draw the outline OPRQ, representing the sides of the pipe.

Then draw the cone VKK, meeting the top of the pipe at FE.

We now carry a line across from A, Fig. 1, and where it meets the centre line of the cone Fig. 2, as S will be

the deepest part of the mitre line. Draw the mitre line FSE.

Draw a plan of the base of the cone Fig. 4, and divide it off into equal spaces.

Project lines from these points up to the base line KK, then towards the centre V, until they meet the mitre line FSE. Then carry them across horizontally to the line VK on the side it is desired to draw the pattern.

Set the point of the compass at V and the lead at K, and describe the arc KM, on which lay out the stretchout of Fig. 4, and draw lines in the centre V.

Then with the lead on each line of the points on the line VK, swing an arc cutting the corresponding line.

If it be desired to cut the cone off at the top as at the lines shown, then swing an arc from this point.

Hardware Letter Box

Tie Counters.

Jas. Flett, Wiarton, Ont.—"Who are the manufacturers of tie counters for loaders?"

Benton Tie Register Co., Boston, Mass. —Ed.

Marine Glue.

W. Hanna & Co., Port Carling, Ont.—"Kindly give us name of manufacturer of marine glue for putting canvas on bottom of boats."

Canadian Anilines & Chemicals, Ltd., Bd. of Trade Bldg., Toronto.—Ed.

Oil Refineries.

J. J. Heinrichs, Osler, Sask.—"Kindly give me names of some oil refining firms."

British American Oil Co., Toronto; Queen City Oil Co., Toronto; McColl Bros., Montreal.—Ed.

Lawn Mower Grinders.

The Lakefield Hardware Co., Lakefield, Ont.—"Can you give me name and address of firm manufacturing lawn mower grinders?"

R. Woon & Son, Oshawa, Ont.—Ed.

Fire Escapes.

J. A. Elwes, Paisley, Ont.—"Kindly give me names of firms manufacturing fire escapes."

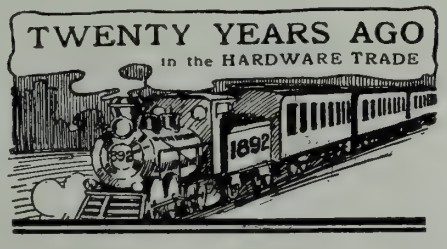
The Geo. B. Meadows Wire Iron & Brass Co., 479 Wellington St. W., Toronto; C. A. Hutchinson & Co., Montreal, Que.; McGregor & McIntyre, Ltd., Toronto; John Watson & Son, Montreal; Dennis Wire & Iron Works, London, Ont.; Canada Foundry Co., Toronto.—Ed.

Tiles and Mantles.

Brocklebanks, Ltd., Arthur, Ont. — "Can you give us names of manufacturers of tiles and mantles for fireplaces?"

Barton Netting Co., Windsor, Ont.; Garth Company, Craig Street, Montreal. —Ed.

Coal Chutes.



Wm. Black, Durham, Ont.—"Will you kindly favor me with names of Canadian firms manufacturing coal chutes?"

D. J. Barker & Co., Picton, Ont.; Galt Stove & Furnace Co., Galt, Ont.—Ed.

Electric Batteries.

G. N. Bourque, East Sherbrooke. — "Can you inform me what firms manufacture Electric Batteries, for mining work?"

Canadian Carbon Co. of Winnipeg, Ltd., Winnipeg, Man.; Canadian Carbon Co., 96 King Street West, Toronto; Canadian National Carbon Co., Paton Road and G.T.R., Toronto; Canadian General Electric Co., Toronto.—Ed.

The following items were taken from the issue of July 2, 1892:

"Though flies have not been numerous this summer, the sale of wire cloth and window and door screens has been unusually large."

Editor's Note.—If flies were "not numerous" twenty years ago, people were greatly blessed then. Despite the activities of the "Swat the fly" campaign, the fly of to-day continues to increase and multiply and, if what the doctors say is true, to breed and spread more disease than any other factor.

* * *

"Mr. Doherty of the Doherty Manufacturing Co., Sarnia, Ont., has been granted a patent from the United States patent office for a hot water boiler."

Editor's Note.—The Doherty Manufacturing Co. are to-day among the well known Canadian stove manufacturing firms.

* * *

A description appears of a new addition to the offices and plant of the Kemp Manufacturing Co., Toronto. The business was started six years previous and developed rapidly."

Editor's Note.—The Kemp Manufacturing Co. is now the Sheet Metal Products Co., the change in name having been effected nearly two years ago. The plant has been very largely increased, and the scope of the business widened in the twenty years which have elapsed since the additions described were made.

* * *

"James Walker, Jr., and David Walker have formed a partnership as hardware merchants, under the name of James Walker & Co."

Editor's Note. — The James Walker hardware store is to-day one of the largest and best known in Montreal.

* * *

"J. D. Rockefeller, the New York millionaire oil man, was in Montreal last week with his family."

Editor's Note.—The wording of this note indicates the difference of the standing that "John D." enjoys to-day and his rating at that time. He was not then the preeminent figure that he is to-day. Twenty years ago, he was a "millionaire oil man." To-day he is a multimillionaire, perhaps even a billionaire, and "the" oil magnate.

* * *

"The merchants of Hamilton are up in arms at an order issued to the police by the chief constable to the effect that all projecting signs are to be removed without delay."

Editor's Note.—The projecting sign is still a source of much agitation. It has been abolished in some cities, but in other places it still flourishes.

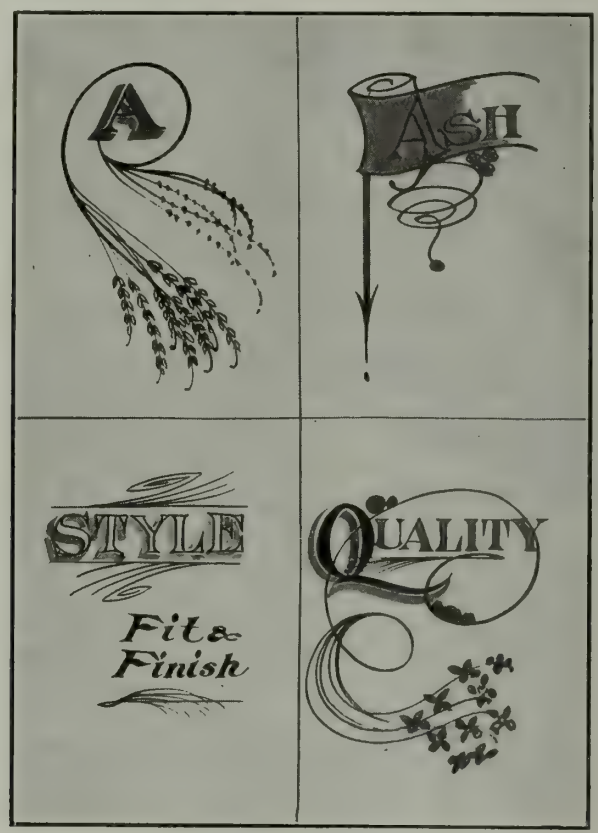
THE LOSS WHICH SLOW SERVICE BRINGS.

(Concluded from page 38)

tention than was the customer who had been first. Scriptural that may have been, but it was not good business, for it made the first customer annoyed. He made his purchase, but left the store in an unhappy frame of mind, and that is a worse thing for the dealer than for the customer.

This is a difficult question. The clerk undoubtedly was trying to give his best service. He did not want to keep the second customer waiting, and so gave him attention. But he did not keep both customers interested as well as he might, and so neither were thoroughly pleased.

It is a vital question this. The greatest thing the dealer can give is service. Perhaps it is the greatest thing which any one can give. Anyway, dealers are largely judged according to the service they render; and service does not only include the selling of satisfactory goods. It means also a satisfactory way of selling them.



Lesson 17--Complete Course in Cardwriting

Demonstrating the Old Outline Roman as Used Previous to the Introduction of the Square End Brush and Still Used to Some Extent Where a Filled-in Letter is Preferable.

(By J. C. Edwards. Copyright Canada, 1911.)

Before the square end brush was introduced into cardwriting the brush outline letter was almost exclusively used in all the different styles from the heavy block to the dainty, fine, line script.

To-day it is seldom used, only for very fine work, where speed is no object.

Suggestions for show card illumination, executed with a small brush and made effective by the use of colors.

The Various Treatments.

The outline letter is treated in various ways, according to the effect desired. One style is outlining and filling in with the solid color, as is shown in the plate in black.

The colored letter with the black outline gives a desirable effect when used as a heading such as shown in the card, "An Easter Novelty." Another style is the bare outlined letter such as the P, R, S, T, U, V, W and X. This style, when shaded, as the word "style," in the small card, gives a pleasing touch to a showcard.

Care to be Taken.

In executing this letter, care must be exercised in always making a uniform stroke and never over-running, thus cutting off the spur, as has been done in some of the letters to demonstrate. Letters such as B, D, K and P show this, making it necessary then to cut the vertical lines short before the spur is reached, or as is shown in letter A, end or begin the stroke with the spur curve. Practice, of course, will teach you the best way to work up these details.

A Uniform Letter Face.

Another thing necessary when the letter is to show the outline, is to always leave a uniform space between the lines, i.e., the face of the letter. To do this it may be wise to outline the letter in pencil first before the brush or square pen is applied. It may also be advisable to use the T square to make sure the strokes are perfect. However, this is not necessary, if the letter is filled in solid the same as the outline.

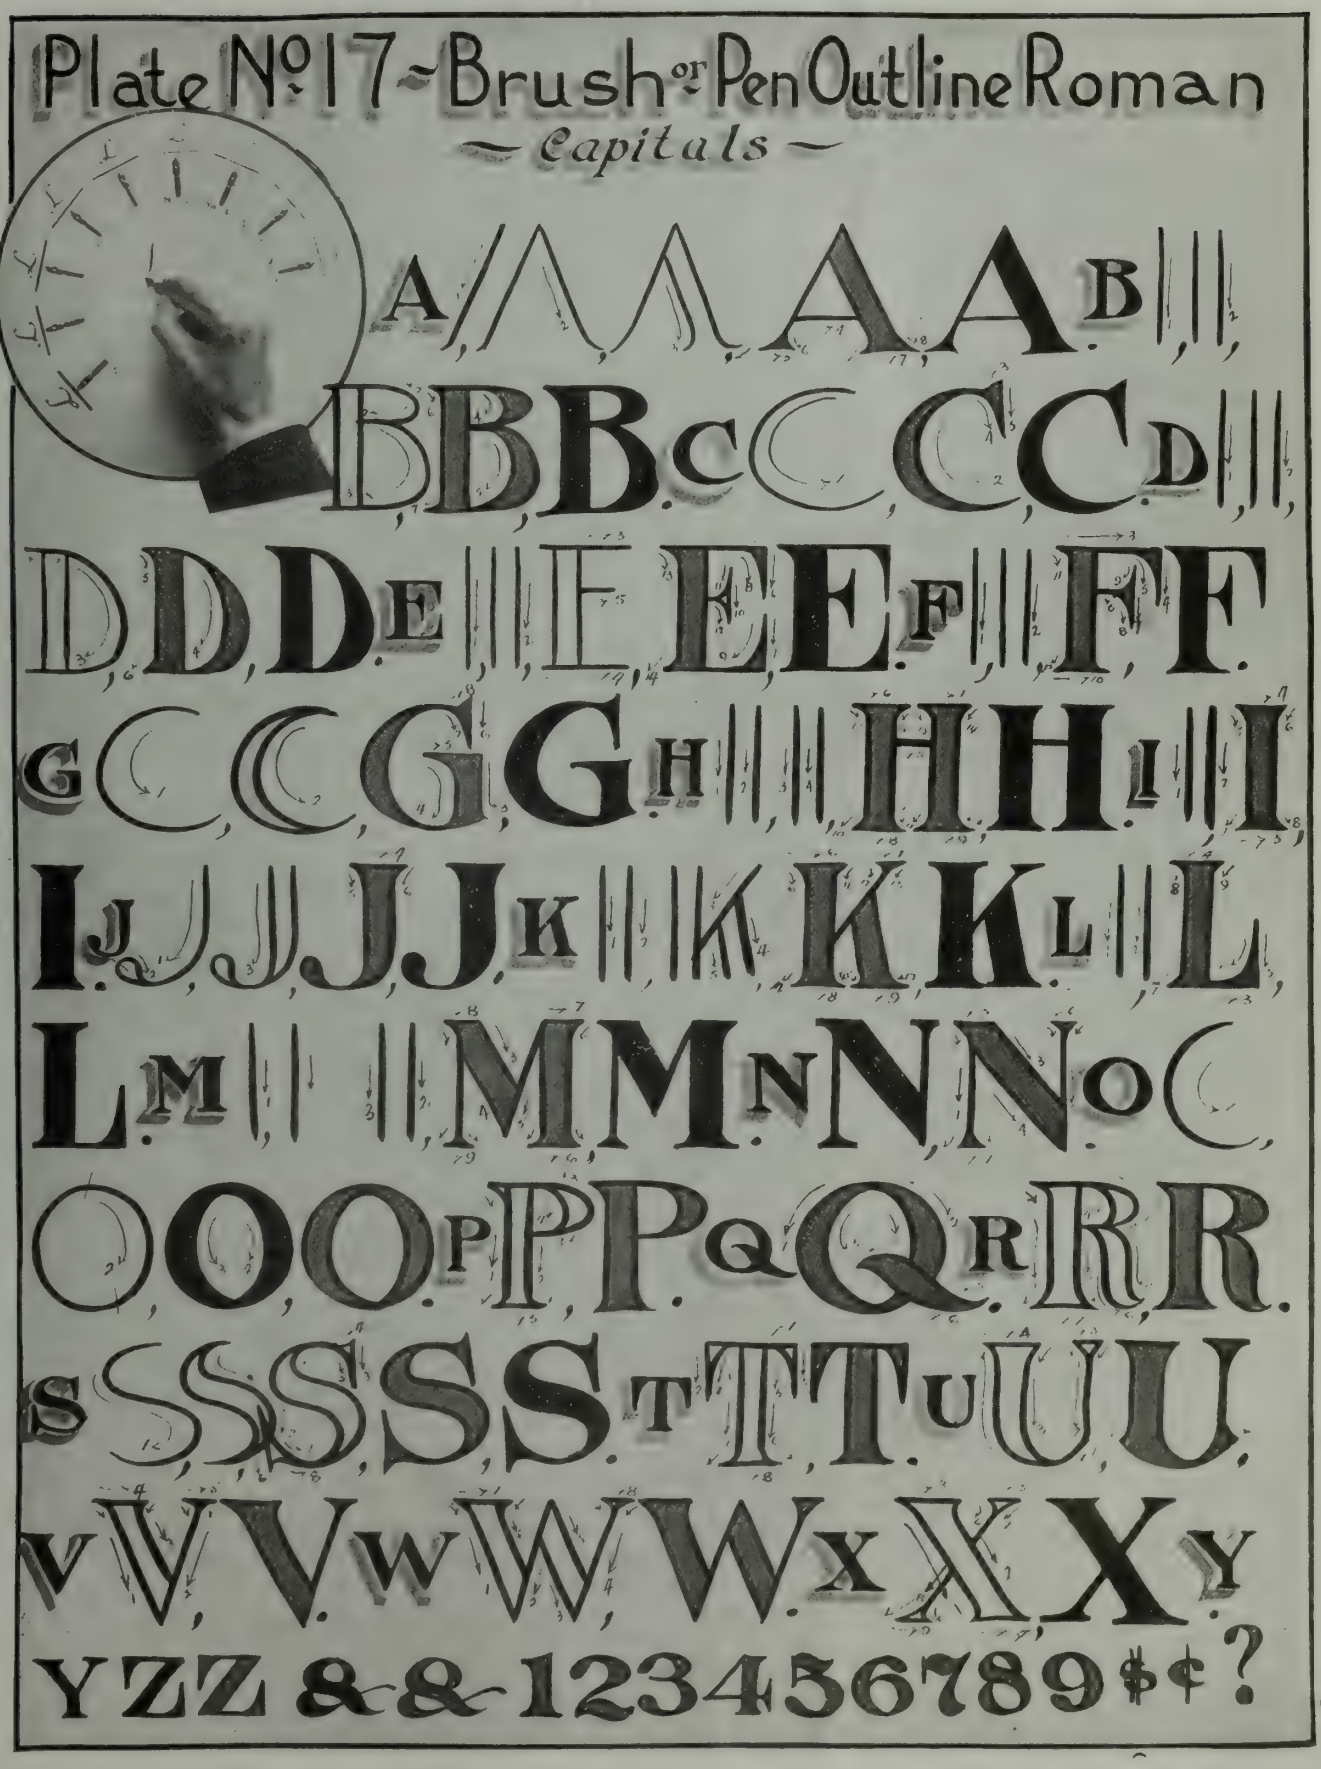
The Pen or Brush to Use

In making a letter about 1½ inches high, a soennecken pen should be used that would give a stroke about 1-16 of an inch, or if a brush be used, which is preferable in most cases, a No 3 or 4 red sable square end brush drawn down to a nice, small, square point, is the best. Some writers, however, use a red sable pointed brush, but it is difficult to bring a stroke to a square end when it is necessary. The brush used in the accompanying plate, as well as in the cards, was the former, and may be procured at any shop where the regulation size (No. 7) is kept. (Ask for No. 3 or 4 red sable in albata with square end).

To Fill in With Color.

As is shown in the plate, a very good effect is obtained by filling in the face of the letter on the wide strokes with color. This may be done in two different ways. One way is, first, to do the whole letter in the color, then make the outline in whatever color is desired, of course, being careful that the outline does not mix with the filler causing an endless amount of trouble. The outline should always be darker than the centre. The other way is to make the outline first, then run in the color afterwards. If letterine be used to make the outline, it is almost sure to dissolve into the color, so we advise using black Indian ink (waterproof) for the outline—on sale at all stationery stores.

Brush Stroke Decoration.



Practice with the brush the free hand scrolls and curves shown, and it will enable you to do some rather effective stunts in decorating a card. Practice will do anything. Always take a good sweep when practising, and don't be afraid to move quickly, for in speed your success lies when it comes to making scrolls. Get some old cardboard and practice till you become efficient.

Novelty Decorations.

The simple novelty decoration shown in the four small cards illustrated were done with the No. 4 brush used in lettering the plate and cards.

These scrolls and curves are easily made, and when applied in some dainty shade (not black) to a card gives a very pleasing change. Say, for instance, you take the ribbon design and make an outline of purple and fill it in with mauve, which is obtained by adding white to the purple. The letters should be outlined after, if they are to be left with the mauve centre, but if a white centre is desired, which we think would improve it, they should be outlined before the

(Continued on page 44)

This plate illustrates the brush or pen outline Roman letter used especially for fancy headlines.

Progressive Hardware Retailing

Fort William Firm Inaugurate Cash System With a Big Sale—Featuring Fishing Tackle—Held a Successful Demonstration—Maritime Merchants Conduct a "Swat the Fly" Campaign.

INAUGURATE CASH SYSTEM.

Fort William, Ont.—Gerry Bros., proprietors of the "Big Corner Hardware Store" have started to do business on the cash basis. They are now holding an "inauguration sale" of eight days' duration, and are offering a 10 per cent. discount on all lines of goods during that time.

In a large advertisement in the daily papers, they state: "No more bookkeeping, no more collectors, no more bad debts. And, in the face of these savings in running expenses, we can offer our patrons more value than under the charge account system, now out of date in all regulated modern business concerns." The 10 per cent. discount is offered on everything in the store to "commemorate this far-reaching event."

As an evidence of the change they have made in their methods of store management, the firm have adopted the advertising slogan—"Better service—more value—less expense."

SWAT THE FLY CAMPAIGN.

St. John, N.B.—Now that the season for featuring sales of articles to be used as wedding gifts is drawing to a close for the present at least, hardware dealers whose policy is activity and wide-awakeness, are beginning to dwell upon the importance of householders, and business people being fully equipped with window screens and screen doors. Dealers in various centres of the province, in Fredericton, Moncton, Chatham, St. John, and elsewhere are joining in the campaign against the spreader of danger and disease, the fly, and the results are already noticeable for there has been a heavy demand for screen doors, window screens, and the stock wire screenery for the making of them. "Swat the fly" signs are prominently displayed in several of the windows and pamphlets are exhibited quoting eminent and learned professors to the effect that the most common cause of typhoid at this period of the year, is the ordinary, little harmless-looking housefly. These arguments, the fact that the insect breeds in piles of waste and filth, that it is a spreader of disease, that it comes direct from the refuse on public dumps to the homes, and dining-rooms of families, are all advanced in the ad. matter and selling chat of the clerks and dealers in pushing the sale of screen doors and window screens, and their efforts have thus far been decidedly successful. The local press is aiding in the campaign against the fly, and is publishing matter advocating the protection of the homes against its coming, much of it being written by the local preventative officer of the board of health. Is it any wonder after all this that the demand for the articles in question is steadily increasing?

SUCCESSFUL DEMONSTRATION.

New Liskeard, Ont.—The varnish and stain demonstration held by Magladery Bros. proved a success, big crowds attending on each of the three days that it was conducted. The event was advertised extensively and effectively.

Catalogues and Booklets

The Saw in History.

The June issue of the "Disston Crucible" has an interesting article on "The saw in history." It tells of the earliest kind of saws made in primitive days and leads up to the finished article which is turned out to-day.

Peanut Roasters.

Very handsomely gotten up is the catalogue No. 39 recently issued by the Kingery Manufacturing Co., Cincinnati. It is printed on heavily coated paper, the sheets being large size and rendered attractive by the colored cuts and drawings. Among the lines shown are peanut roasters and popcorn poppers, from the smallest "push carts" to the largest and most elaborate combination and rotary machine. The various types of engines are also shown.

Mechanical Rubber Goods.

The Canadian Consolidated Rubber Co., Montreal, have issued the first of a series of catalogues on their mechanical rubber goods. It is marked catalogue "A." Subsequent issues will run from "B" to "F" and will deal with the many lines of rubber goods made by the company. The catalogue now out contains references to power transmission belting, frictioned surface belting, stitched, conveyor and elevator belting, endless thresher belts; band saw bands; rubber hose, steam hose, air drill, pneumatic tool, brewers', water, garden, suction, acid and coke hose, dredging sleeves, coverings for hose, chemical hose, fire hose, hose fittings, packing, tubing, gaskets, rubber covered rolls, and many other lines. It is well illustrated and very attractive in appearance. The cover is embossed and printed in three colors.

LESSON XVII.—SHOW CARD WRITING.

(Concluded from page 43)

mauve is added to the background. Experience is a good teacher—try it.

An Odd Touch.

An effect seldom used, but very effective, is the one shown in the Easter card.

The lettering is made first, then by the aid of a mechanical device known as a ruling pen, the lines of white or any other light shade may be made across the face of the letter. Fasten the card firmly on a drawing board with thumb tacks at the angle desired, and by the aid of the T-square, which is held firmly by the left hand against the edge of the board, making parallel lines at intervals, giving a broken or gray effect.

This is the first introduction in the course of the drawing boards and thumb tacks and ruling pen, and except for such work as the above mentioned they are seldom used, and these are substitutes, thus avoiding the necessity of buying them, although thumb tacks are inexpensive and obtainable at all book stores.

In the Easter card shown the decorations are pasted on and colored with transparent water colors.

For further information re pens, outfits, etc., write to the editor, The Canadian Grocer, 143 University Avenue, Toronto.

Forest, Ont.—Albert Bell, who has been with the Arcade Hardware for the past five years, has severed his connection and gone to Brigden to take charge of Armstrong's hardware store.

Current News of Hardware Trade

Moves to Montreal.

Montreal.—Arthur D. Brown, who was some time ago appointed sales manager for A. Ramsay & Son, moved last week from his old headquarters in Toronto to Montreal.

Store Wall Gave Way.

One of the walls of Philbin & Co.'s store, Montreal, gave way this week, it having been weakened by the tearing down of the wall next door. Little damage was done to the inside of the store.

Fire at Varnish Works.

Toronto, Ont.—A spectacular blaze occurred at Harland & Sons' varnish works, at Eastern Avenue and McGee Streets, yesterday afternoon, when an oil shed in rear of the premises suddenly took fire from spontaneous combustion. The fire brigade had a hard job to confine the blaze to the shed, which was burnt completely to the ground. Damage estimated at $600 was done.

Geo. W. Brown Injured.

St. Thomas, June 24. — George W. Brown, hardware merchant of this city, and Mrs. Brown were injured Sunday afternoon when their horse ran away near Yarmouth Centre, as Mr. Brown was in the act of putting on the bridle. Mr. Brown was knocked down and run over, and Mrs. Brown was thrown out of the buggy and dragged some distance. Neither was seriously hurt, but it will be some time before Mrs. Brown can be moved to her home.

Meeting of Creditors.

Toronto, Ont.—A meeting of the creditors of the Independent Glass Producers, Ltd., was held at the offices of Jenkins & Hardy, Toronto Street. The appointment of James Hardy as assignee was confirmed. The statement showed assets of $170,565.54, consisting of real estate, buildings, accounts receivable and stock in trade, with liabilities (without taking into account the capital stock of the company)), of $95,087.30, and indirect liabilities $10,521.86. The business will be wound up.

Store Was Flooded.

Toronto, Ont. — Somewhere between the hours of Saturday evening and Monday morning the faucets of a large automatic water-tower on the fifth floor of Aikenhead's hardware establishment, Temperance street, became unloosed and the water stored up there as an emergency against fire began to pour forth in slow steady streams. All day yesterday it is believed the flood continued, and the waters sweeping the ceiling splashed from floor to floor until the whole western wall laden with merchandise was saturated.

Hardwaremen Elected.

St. John, N. B.—Two local hardware dealers have been honored in the provincial elections conducted here this

Hon. John E. Wilson, M.P.P.

week in being chosen to represent the city at Fredericton in the local legislature, with the title of M.P.P. They are Philip Grannan, of Main Street, North End, and John E. Wilson, of Sydney Street. Both are representative citizens, who have always taken an active interest in public questions, and the magnificent vote they polled is evidence of their recognized worth. Mr. Grannan, while last man of the four out of eight elected, polled a splendid vote, having a large majority numbering several

Philip Grannan, M.P.P.

hundred, over his nearest competitor, while Mr. Wilson led the ticket by a handsome majority. He was recently distinguished by the Government by being made a member of the executive without portfolio, and is now the Hon. John E. Wilson, M.P.P.

New Retail Firms.

Wilcox, Sask.—H. Cox is starting in the tinsmithing business here.

Leask, Sask.—A handsome store has been started here by R. & A. E. Mansell.

Saskatoon. Sask.—The Canada Plumbing Co., have started in business here.

Calgary, Alta.—Williamson & Turnbull are starting in the tinsmithing business here.

Edmonton, Alta.—McArthur & Perry, heating and sanitary engineers, have commenced business here.

Business Changes.

Rapid City, Man.—R. Forrester, hardware dealer, has removed to Lockwood.

Wawanesa, Man.—Couking & Co., hardware dealers, have been succeeded by W. S. Peters.

Pennant, Sask.—B. M. Hill, hardware dealer, has been succeeded by Honey Bros.

Medicine Hat, Alta. — W. Emson, hardware dealer, has sold his property at Moose Jaw and is opening in business here at the corner of South Railway Street and Columbia Ave.

North Edmonton, Alta.—Wilson & Co. have taken over the hardware and furniture business of How Bros.

Elmvale.—Geo. E. Roe has purchased the hardware business of J. L. Thompson. A new stock is being secured.

Kamloops, B. C.—Frank Rushton is retiring from business and is clearing out his entire stock.

Blaine Lake, Sask.—M. S. Stephens has sold his hardware and implement business to R. W. Pozer.

Pennant, Sask.—B. M. Hill, hardware dealer, has been succeeded by Honey Bros.

Delisle, Sask. — Delisle Bros., hardware and implement dealers, have sold their Netherhill branch to H. R. Johnston.

Ridpath, Sask. — J. W. Hagyard & Son, hardware dealers, have been succeeded by J. R. Watson.

Personal Notes.

Ottawa, Ont.—A. Newlander, of the Capital Hardware Co., Bank Street, has gone on a trip to the old country. He will visit his native town in Germany.

C. C. Ballantyne, vice president of the Sherwin-Williams Paint Co., of Canada, sailed last Friday for England, where he will spend several weeks.

P. Pritzker is leaving on a six months' trip to the Coast in the interests of the National Electric Heating Co., Toronto. Mr. Pritzker will call at all the principal places throughout the West.

Montreal.—R. W. Ellery of the Ellery Twist Drill Co., Portsmouth, N. H., visited the Montreal trade during the week.

Weekly Market Report --- Metals

METAL NOTES

Lead sheets have been advanced in price. The scarcity in lead has been relieved somewhat this week.

Further advances in copper are predicted.

A brisk tone all around is noted.

MONTREAL.

Montreal, June 27.—It is a strange week which does not see some changes on the metal market. Certainly of late there has been no reason to complain of monotony. Locally the metals do not rise and fall with quite as great frequency as on the primary market, but still changes come quite fast enough to suit the majority of buyers.

This week the only movement which will affect the moderate sized buyers is that of lead. The pig, which fell for a day or two, has more than recovered what was lost. Indeed, the metal is at a new high level. It has not been found necessary to advance the local quotations for the pig, but sheets have been raised 25 cents a cwt.

Copper, too, continues high. There seems nothing to look for but a higher market.

Husbanding Supplies.

Tin presents a somewhat peculiar position. The market is rising. Manufacturers are known not to have tremendous supplies, yet they are not buying largely. It would seem they are husbanding their supplies hoping for a better market.

Stocks are in better shape than they have been for some time, and here is cause for great rejoicing. Lead, which has been the scarce metal, is more plentiful now. Some shipments have reached Canada, and while much of this supply was immediately shipped to the buyers, yet some remained to meet the regular daily demand.

Iron presents a somewhat peculiar situation, both as regards stock and price. On the primary market it has been advancing. Indeed, it is higher now than it has been for a long time. So rapidly did it rise that some Canadian buyers, who had secured supplies at a good price, determined to sell these to the British steel mills rather than bring them out to Montreal. They could make more by taking advantage of the English rise than by bringing the iron across to the Dominion.

Advance in Lead Sheets.

Lead.—The changes here reported locally are:—

Sheets, 2½ pounds per square foot, $5.50; an advance of 25 cents.

Sheets, 3 to 6 pounds per square foot, $5.75; an advance of 25 cents.

Since the pig has advanced so rapidly on the primary market to-day, it would seem that a higher level for this is quite likely to be made locally within a fortnight.

Spelter—This metal is high now. It was quoted $6.75, East St. Louis, to exceedingly large buyers, but some of these, when they came to order, found that they had to pay $7. This market, too, seems to be tending upwards.

Strike Makes Little Stir.

Tin.—The metal is peculiar. The strike in London has not made the difference which might have been expected. Tin has dropped even in face of the difficulty in securing shipments. Of late it has risen again, but the future is a little uncertain. East Indian supplies are now being sent to Continental ports, instead of to London. The shipments will, therefore, reach this continent all right after a little time. It is the immediate supplies which are difficult to secure.

TORONTO.

Toronto, June 27.—The metal situation presents some points of undoubted interest. The upward trend has been maintained for the most part, and there appears to be every reason to believe that this condition will be maintained. Quite a few buyers are showing inclination to hold off, presumably in the belief that lower prices will be reached after a while. They are buying in very small quantities and getting along from hand to mouth.

Despite this tendency, the volume of trade continues exceptionally active. The consumption in some metals is described as "enormous" by one man. The industrial activity has resulted in a general demand for all metals and, as the need is imperative, most buyers accept the prevailing quotations without demur.

Tin—The situation in tin is a little easier. The price has not changed, being still at 50 cents, but the London market has weakened a little. It is not thought here that the permanent position of the metal has been weakened by recent developments, which are accepted as temporary fluctuations. Demand for tin is good. Regarding tin, the American Metal Market says:—

"The foreign market continues entirely a strike market, varying with the forced purchases of dealers who have been unable to land their tin, and it would seem useless to try to forecast what the immediate future will develop. That the largest port in the world should have been tied up with a strike so long seems perfectly remarkable. The mail advices that reached us dated June 14th, report that at that time there were nearly 3,000 tons of tin in vessels at London docks that could not be unloaded, and about 500 tons in warehouse, and latest cable advices give no indications that the strike is any nearer being settled."

More Lead in Sight.

Lead—Greater strength has been shown in lead. Sheets have been advanced 25 cents a cwt., and further advances may come shortly. The scarcity has been relieved somewhat, although stocks here are still very small.

Copper to Advance.

Copper—It is predicted that copper will advance again shortly. Certainly the demand is very heavy and stocks are none too good. It is interesting to note a report on the London market which states that, "The statistical situation and outlook could hardly be better, but the technical position of our market is one of some danger, because everybody seems to be committed on the 'bull' side, and there is an absolute absence of a 'bear' account. If, therefore, any unexpected bad feature arose, we might see a very sharp fall in prices, as there would be no buyers and all sellers. This position will doubtless be taken advantage of at a suitable moment by interested parties." There is no speculative interest here. The advance in copper has been due to the gains in consumption over production.

Spelter—More interest is being shown in spelter. Business has been brisker, and there is some talk of impending advances.

WINNIPEG.

Winnipeg, June 24.—A general advance of all products in which lead is a factor is to be recorded this week. Shot, solder, white lead and pig lead have all gone up. Shortage of stocks at the centres of production are given as the reason of this steady advance in lead. There is no change in the sheet metal situation here and the trade is hampered by the difficulty of securing a sufficiency of raw material.

Bridge and ironworks are very busy locally meeting the extraordinary Western demand for structural material both for steel frame and reinforced concrete buildings. Reinforced concrete is evidently growing in favor among builders of large edifices for business purposes.

Weekly Market Report --- Hardware

DEMAND IMPROVES

The warm weather has brought a marked improvement in the demand for hardware. Business is brisk in all lines, farm tools coming to the front.

An advance of 5 per cent. has been made on brass and bronze lock sets and hardware.

MONTREAL.

Montreal, June 27.—Here,as in almost all other lines, the change from the cold damp weather to warm summer days has brought about a revival of business. Lines which have lain quiet are now moving well, and for goods which have been selling in spite of the weather there has now come an increased demand beause of it.

Prices are still creating interest—not that there have been any changes, but that some of these are expected. Builders' hardware—which has for some time been manufactured at greater cost than usual, owing to the high cost of copper—is still said to be on the point of rising. Such an advance has not yet been reported here, but it may come. The continued rise of copper would make this seem likely.

Preserving Season Coming.

Household Goods.—For these the demand has been good, and good it continues. Not only are general kitchen utensils now selling, but the dealers are laying in stocks of preserving kettles—which will shortly be needed now. A fortnight more and the sale of strawberries for preserving will be on. Then will be the time for the dealers to make the profit that there is from these goods.

Seasonable Goods.—While lawn mowers have been selling well, owing to the fine lawns which the rainy weather has brought along, there was a remarkable slowness with regard to the sale of hose and sprinklers. The warm weather of the past few days has, however, brought a great change. Lawns will suffer now if they are not watered, and hose, sprinklers, and watering cans will sell rapidly.

Heavy Hardware. — There is more talk of a further advance in iron pipe and bar iron. This rise might come any day.

Big Trade in Builders' Hardware.

Builders' Hardware.—Outside of the expected advance in price the interest in this class of goods is the heavy ordering. The rush of building has created a great demand. Contractors are buying largely, and there is a tremendous amount of what might be called smaller ordering, householders buying a few fittings for the improvement of their home. This business, coming to the hardwaremen so early, has been responsible for many supplementary orders reaching the jobbers and the manufacturers.

Sporting Goods.—Your real enthusiast is going to play his favorite game whatever the weather. Nevertheless the coming of good weather does bring with it an increased demand. Hot days like the present make people more anxious to make that long-talked of fishing expedition. They will, therefore, buy the rod and tackle necessary. Tennis and golf are growing in popularity with the grass. New rackets and clubs are being purchased—and balls without number. The same is true of baseball. The game has been played, it is true, but this kind of weather makes people think that they will not do with their old equipment after all, but will buy the new glove or mask for which they have longed.

TORONTO.

Toronto, June 27.—The situation here reflects a splendid degree of activity. The market has been active right along, despite the handicap of bad weather, but now that warm weather seems to have arrived at last, business shows marked improvement.

The fly in the ointment is the transportation congestion which is still hampering the wholesaler. It is hard to get supplies in and harder still to get orders out. Shortages have developed off and on this season in certain lines, but the fault has been, not with the manufacturer, but with the railroads. The manufacturers have kept well abreast of the demand, but slackness in delivery has caused the trouble. One jobber states that a consignment of goods billed for Toronto, which left an American centre on May 13, has not yet been received. This is not an isolated case by any means.

Seasonable Goods—The demand has fallen off somewhat, as the retailers are now pretty well stocked. Although repeat orders have not started to come in yet to any extent, this has been a great year for screen doors. Sales have exceeded other years very considerably. It has also been a great year for lawn mowers. The wet weather has made the grass grow, and mowers have been very much in demand. To counteract this, however, it has not been a good year for hose, the wet weather being again the reason.

Household Goods—The demand is now setting strongly toward preserving kettles and saucepans. There is still a big demand for refrigerators and ice cream freezers. Goods for camping purposes are also very much in demand.

Farm Tools the Feature.

Farm Tools—The big feature of trade this week has been the call for farm tools of all descriptions. Hay rakes, forks, etc., have been bulking largely in the orders. There has also been a big call for dairy products, such as cream separators, strainers and milk parts. The harvest tool trade will continue strong until the late summer.

Brass Ware Up.

Builders' Hardware—An advance of 5 per cent. on brass and bronze lock sets and hardware has been announced. This has been expected for some time, as the cost of raw material has been very much higher this year.

The demand for builders' hardware is growing all the time. In view of the wide scope of building operations, it is confidently asserted that the demand will break all records this year.

Heavy Hardware—There is a good demand in all lines with prices firm. Supplies are said to be quite sufficient.

Sporting Goods—The demand is large in all lines of sporting goods. The bad weather up to date has interfered somewhat with the sale of canoes, paddles and such goods. It has caused the tennis players to hold back, and has resulted in a real loss in the trade in golf, tennis, and baseball balls.

WINNIPEG.

Winnipeg, June 24.—The demand for builders' hardware still continues brisk both in Winnipeg and Western cities and towns, and the volume of building permits is steadily growing, permits issued in Winnipeg are near the eleven million mark.

Exceptionally hot weather during the past week has given a fresh impetus to camp outfits and gas and oil cooking apparatus. There is also a fair movement in summer sporting goods.

Farmers are now buying all supplies needed for the season's improvements in building, fencing and so on, and country dealers will plan extensive orders along these lines during the next two weeks unless there should be a radical change in crop conditions which at present are most satisfactory. Rain would, however, be welcome at once and serious injury would result from its long absence.

Stoves, Furnaces and Accessories

A Satisfactory Arrangement of Stove Stock

Dealer in Ontario Town Has Bulk of Stock on Upper Floor, But Keeps a Few Samples on Main Floor at Rear—This Arrangement Combines Advantages of Other Plans and Does Away With Objections.

The question of the proper location of the stove department in the hardware store has often been debated. There has been a tendency of late years to put the stoves on the floor above the main store, and dealers report that the results have been quite satisfactory. They state that they have found it possible for the first time to display the stock properly. The burden of salesmanship has been lightened by the fact that the stock is isolated, and it is possible to talk to the customer freely and to demonstrate the goods without interruption.

Others claim that there is one serious disadvantage. The stock is not in sight and sales are lost on that account. "Have the stoves in full view on the ground floor, and you will have a chance to canvass five customers to every three who will climb to the next floor," states one dealer.

A hardwareman in a middling sized Ontario town has hit upon an arrangement which, he believes, combines the advantages of both plans, and does away with the objections. The way he has arranged his stock is shown in the accompanying illustration.

At the rear of the store the floor is raised. To the left on the raised area is the office, to the right is the stairway leading to the floor above. Between is a space of about 16 feet, which he has used to display some five of his most attractive stoves. The rear section of the next floor—the space adjoining the head of the stairs—is the stove department proper and there the bulk of the stock is kept. The dealer in question explains his arrangement in a letter to Hardware and Metal as follows:

"When people come into the store, they cannot help but see the stoves which are placed immediately to the front of the raised part of the store. If they are interested in stoves, they immediately repair to that part of the establishment. This partial display of stock is quite as effective, we believe, as keeping the whole stock on the main floor. It advertises the fact that we handle the stoves. Now for the 'exclusive' advantages of this plan.

"We always take a stove customer and show them these lines first. But, as every stove salesman knows, you can be more sure of your sale if you can get the customer away to a quiet part of the store where it is possible to look over the stock and discuss the matter at length and without interruption or restraint. That is where the advantage of the upper floor department comes in. After a brief inspection of the main floor stock, we invariably inform the customer that our main stock is upstairs, and invite them to pay a visit

Plan showing the arrangement of stove stock which Ontario dealer has adopted.

of inspection. The stairs are only a few feet away—it is not even necessary to step off the raised floor—and in practically every case the customer goes along. The view of the complete stock above is most convincing and, when a sale is lost, it is due to that fact that the customer is not yet quite ready to buy or to lack of persuasive power on the part of the salesman.

"On the upper floor we have plenty of space and can show a more complete assortment than would be possible on the main floor, no matter how capacious the establishment might be. Every line that we handle is shown. Further than that, we have enough space to show the stock right. Each stove and range is so placed that it is possible to walk around it and inspect it from every angle. It is possible to keep them free from obstruction, and, being off the main floor, it is much easier to keep them bright and dustless. The stoves show to much better advantage.

"I really believe that we make at least 25 per cent. more sales than we would if the department were on the main floor. Our business has increased since we put this arrangement into effect.

"Finally, the presence of the hoist at the rear of the store does away with any difficulty in handling the stock. Stoves can be changed from one floor to the other in a few minutes, and without much effort.

A Good Arrangement.

This arrangement has undoubtedly many good points, and is worth consideration. It is, in a sense, a compromise between the use of either floor exclusively, and it does away with the disadvantages which attach to the exclusive use of either floor.

FEATURING FISHING TACKLE.

New Liskeard. — "Taylor's News" which is published "every once in a while" by the Geo. Taylor Hardware Co., contains the following reference to the stock of fishing tackle that they carry.

"The expressman has just dumped another big parcel of all kinds of fishing tackle into our store. We have found in the parcel a lot of specialties—in the fishing line—that should appeal to all kinds of anglers. These goods are the kind continually in demand among the good fishermen who do real fishing and therefore they should appeal to you. Don't forget that the bass season is on the very verge of opening. Get out early and make a good catch. Our line of tackle will help you to catch the limit. We've studied this question, because we too, profess to be fishermen of no mean class, and consequently we feel confident in recommending the lines we sell.

"If you are going to do any brook trout fishing we have a bait carrier that will save you a lot of trouble. It's small, and convenient; will hold water and pins to the belt. It's easy to carry and will save a lot of extra walking for bait. What's more, they only cost 25c. Get one.

Weekly Market Report---Stoves

STOVE MARKET BRISK.

The stove market is quite brisk for this time of year. Immediate demand is very heavy and some manufacturers think that the inauguration of the fall rush will find stocks higher than desirable. This, however, is largely conjectural at this stage.

Booking for the fall is reported to be good.

MONTREAL.

Montreal, June 27.—At last summer has come. The warm weather has already done something to create a more seasonable demand(but there has been trade lost which is not likely to be regained. The season's business is not behind that of 1911. In truth it is ahead, but not so much ahead as would have been, had the weather proved more favorable.

A strange demand has been felt for refrigerators. This indeed is the one line which the weather does not seem to have affected, and it is the line which one would naturally have thought would be the most harmed. Generally large refrigerator sales are reported; one concern stating that the sales to date this summer are more than fifty per cent. in advance of those made all last year.

Just why this should be is not easily understood. Last June it was practically impossible to get along without a refrigerator. The early weeks of this June, on the other hand, were quite cool, yet they saw a greater demand than was noticed in the same period last year. The general desire of the people to have more comfort undoubtedly has something to do with this demand; but there is another thing which must be considered. The total demand for refrigerators this year, may not be so much in excess of the demand felt last year as would at first appear. Perhaps the demand has just been shifted—some who met part of this last year, being practically out of business now.

The manufacturers, at the first of the season, determined not to make some of the cheaper lines. So, when agents who in the past have sold cheap refrigerators largely, wrote asking a repetition of their previous year's order the manufacturers refused to fill these, quoting a higher price at which they would sell the refrigerators. The agents apparently thought this was by way of being a bluff. They held off, then sent their order again; but again were told to pay a higher price to get the goods.

Generally business is fair, and showing a tendency to improve. Especially has there been a growth in the demand for corrugated iron for roofing. Those supplying this line have been hard put to it to fill orders.

Summer Goods. — Ice cream freezers have already begun to move faster. This weather was what they needed. The same is true of watering pots. There have been more of these sold in the last few days than in any week to date. It would seem the call for this class of goods will continue.

Gas Stoves.—A steady demand is continuing. This is rather an off season, the early demand being satisfied and the new houses not being yet completed, still orders show a good call.

Record Season Expected.

Ranges and Furnaces. — Ranges are being sold to the dealers who are preparing for the heavy demand which will come in August. Furnaces are going to the contractors. The number that these are needing so early in the season is surprising. It begins to appear that there may be difficulty in filling orders at a later date.

Indications also are that the call for radiators will be greater even than it was last year, and last year broke the record.

TORONTO.

Toronto, June 27.—Stove manufacturers are pleased with the turn in the weather. It has meant more business for them. The dealers could not realize that the fall was coming until the summer had really arrived. Now that the warm weather has arrived, the hardwareman will begin to look forward to the next season. And that means he will begin to order his fall stock of stoves.

Many have already done so. Some manufacturers state that the amount of booking for fall already done is well in excess of past years; others state that it is at least good. All agree that in some lines, furnaces, for instance, the booking has been very much heavier.

Immediate shipments show an even more pronounced improvement over last year. "We are not getting stocked up to meet the fall trade as well as we should," states one manufacturer. "In fact, we hardly seem to be able to gain at all. The stoves are shipped out almost as soon as they are made."

This is a phase of the situation worth considering. If all manufacturers are finding the present demand equally heavy, it is certain that the fall rush will find stocks lower than is usual or safe. It is, of course, purely conjectural as yet but some of the manufacturers are anticipating that they will have a brisk time filling their orders when the fall business starts.

Demand Revived.

Gas Stoves.—There had been some falling in the demand for gas stoves noted in the past two weeks, but the warmer weather has brought the trade along again with a rush. People who had been leaving off their purchases until the last possible moment are now eager to buy and the hardwaremen are finding the demand to be very heavy. As a result, sorting orders—all for immediate delivery—are reaching the manufacturers. The gas stove trade has broken all records this year with a thoroughness which leaves no doubt as to the permanence of the demand.

Oil Stoves.—There is a large demand still for oil stoves. The trade is well distributed.

A Steady Business.

Ranges.—The cold range sells steadily, if not spectacularly. The manufacturers report that they are securing orders right along for small quantities— one, two, or three, seldom more in any one order. The orders come from all sections.

Big Interest in Furnaces.

Furnaces.— Considerable interest is being shown in furnaces. There is more work in sight than ever before this year and the furnacemen are sure of a busy fall. As a result, they are starting to place their orders well in advance and, in many instances, are starting work earlier than usual in order to get as much out of the way as possible before the fall rush starts. A record demand for furnaces is anticipated.

WINNIPEG.

Winnipeg, June 24.—The extremely hot weather of the past few days has stimulated sales of gas and oil cook stoves which were quiet for a couple of weeks previously. All who have the means will now spend week ends out of the city and those who heretofore delayed about furnishing are now on the rush to get furnishings for kitchens and outdoor cooking.

Business in kitchen ranges and heaters is slow as might be expected, but there is already a good enquiry for more extensive heating plant, hot air, steam and hot water. This enquiry spells good demand when the building season is a little further advanced.

Methods of Retailing Paints and Varnishes

Continuous Campaigns Most Successful

Hardwaremen Should Feature Paint From Early Spring to Late Fall—The Systematic Methods of Peart Bros., Regina —One Window Given Over Entirely to Paint—Displays are Changed Every Fortnight.

The importance of featuring paint right through the summer months cannot be overestimated.

From early spring to late fall, there is a consistent demand for paint and all specialties pertaining thereto. Some are inclined to think that, after the spring rush is over, the paint trade is "all in" for the rest of the year. This idea is quite erroneous. The demand continues strong through the summer and is revived most vigorously in the fall. In fact, the fall is being recognized as the best time of the year for painting in many respects. Climatic conditions are then well nigh perfect.

It follows that the dealer who desires to make the most of this steady demand must continue to feature paint. He must see to it that customers are steadily and continuously impressed with the fact that his store carries a full stock and is the place of all places for the purchase of paint. To do this, he will find it necessary to keep his stock pretty well to the front of the store, and to have it well assorted and attractively arranged. A certain amount of advertising will be necessary and a great deal of window display work will be indispensable.

Have a Schedule.

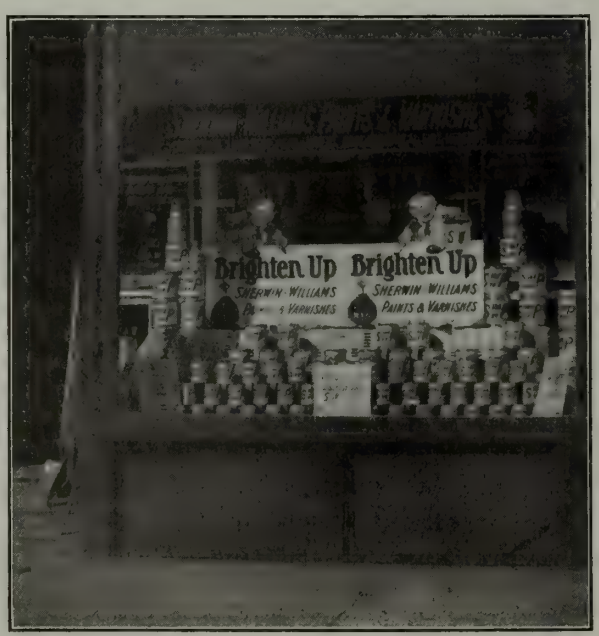
Window displays of paint products should be arranged at regular intervals. The best plan to pursue is to have a schedule, arranging the times at which the different lines are to be featured in window displays.

One Window for Paint.

One of the best arrangements possible is that followed by the Peart Bros. Hardware Co., Regina. Their store has four display windows, and during the summer season one of these is set aside for the display of paints exclusively. Thus the stock is kept in the public eye continuously. The results have fully justified the measure.

Peart Bros. believe in arranging their paint displays on a systematic basis. The window is changed every fortnight and, as far as possible, each display is arranged on an original plan, so that it will be distinctly different from all which went before. This insures a large degree of attention. Sameness in the displays would become monotonous and the interest of the public would soon wane.

As far as possible, each display is made up of one line. First, house paint will be featured; then varnish stain, then barn paint, and so on. They believe that it pays to make each display exclusively of one line, as it is then possible to show a complete assortment.



An Effective Window.

The accompanying illustration is of a recent display in Peart Bros. store. The lay-out was quite simple. A stand of two steps was utilized. The floor of the window was filled with quart cans, the first step with half-gallon cans and the second step with gallon cans. The background was covered with lithographs and hangers. The general effect was good, and considerable business resulted from this display.

Advertise Well.

Peart Bros. believe in pushing the sale of ready prepared paints most thoroughly. They devote considerable space to advertising their stocks, and have worked up a big connection in various ways.

The systematic methods of the firm in question might well be emulated by

A CONTINUOUS WINDOW CAMPAIGN

In the article above, mention is made of the continuous campaign conducted by the Peart Bros. Co., of Regina, to quicken the sale of paint. During the active season, which means from early spring to late fall, one of the four display windows in their store is set aside for paint. The trims are changed every two weeks and, as far as possible, each display is made an exclusive one. Only one line of paint is shown—house paint the first time, carriage paint next, and so on. A system of this kind is found to yield results.

The accompanying illustration is typical of the displays which appear in the windows of Peart Bros. store. The arrangement is simple, but striking, and possesses a high degree of selling force.

System is Needed.

other dealers. It is by such methods that the best results are obtained.

Many dealers dress their store windows with paint stock, but make the mistake of leaving the display in too long. Goods in a store window soon become dusty. A display which is left in more than two weeks begins to present an appearance which can best be described as antiquated. Passers-by do not waste any time on such windows.

Regular Rotation.

Other dealers still, do not use their goods for window display purposes in regular rotation. Thus, some lines get more than their share of attention, and others get none at all. Paint is generally in the latter class. The writer was talking to a hardwareman the other day who confessed that he had not put paints in his windows this season. "There are so many other lines to feature," he explained, "and I guess I never thought of paint." His sales had been "fair," he said. He was lucky that he was able to say that.

Continued and systematic attention to the featuring of the paint stock, beginning in early spring and not ending until late fall, is required if the hardwareman desires to get the best profits possible out of his paint department.

Spraying Would Have Saved Apple Crop

Caterpillars Have Ravaged Orchards Which Were Not Treated and Have Left Those Which Were Cared for Unharmed—Hardwaremen Must Arouse Farmers to the Need of Spraying.

The destruction done by caterpillars in certain parts of the Dominion this year has been tremendous. In Quebec it is said that the apple crop has been almost ruined. The juicy Fameuse, which has made the old province famous, is to be scarce; and all because proper precautions were not taken to guard against the pests which this year more than any other have attacked the orchards.

It is too late to do much against these pests now. The caterpillars, it is said, have done their work, and are leaving the upper branches of the trees to form cocoons on the tree trunks. Nothing can be done to remedy the damage; but something can be done to guard against similar damage next year.

In the first place, cocoons may be destroyed, so that the caterpillar's reproduction will be curtailed. But, perhaps, even more good may be done, as far as the hardwareman is concerned at least, by considering just what has happened, and by preparing to induce the farmers to guard against any return of such a state of affairs. Now is the time information is being brought out regarding this plague. Now, therefore, is the time for the hardwaremen to note what is said; to note the declaration of the scientists that spraying saves the trees; and prepare to build up a large trade in insecticide for next year. The farmers are vitally interested in this question. They will be interested to hear any new information which their hardware dealer may be able to give them. If he shows them he has some knowledge of their needs they will buy their supplies from him.

The following extract from a Montreal paper dealing with this subject is worthy of careful consideration: Wherever modern spraying methods have not been practised the orchards have suffered severely, while many of them have been as completely denuded of leaves as though a fire had gone through them. This, it is stated by experts, while it may not cause permanent damage to the trees, will almost certainly greatly reduce the crop, while the upsetting of ordinary leaving conditions, and the extra demands on the trees to turn out a fresh supply of leaves after the caterpillars have finished their work will probably seriously affect next season's crop. The caterpillars have now, it is said by scientists, nearly finished their destructive feeding, and are gradually working down the tree trunks, when they will in a few weeks develop into moths.

Of still greater importance, as showing the value of spraying, is the statement of a man skilled in fruit growing:

One Orchard Healthy, Another Sick.

"Never before," said Peter Reid, secretary of the Pomological and Fruit Growing Society of the province of Quebec, "has the value of scientific spraying been shown as this year. If the provincial demonstration orchards conducted under this society's auspices, had never yet shown the absolute profit of spraying they have demonstrated it now to a certainty.

"There are five orchards of two acres each of which has been established for demonstration purposes by the Provincial Government, and these are under the supervision of our society, with the work being done by experts. On all of these the regular course of spraying has been carried out this spring. On none of these orchards has so much as a leaf been lost through the plague of caterpillars. And at the same time orchards immediately adjoining them have scarcely a leaf left.

"I recently visited the demonstration orchard at Abbotsford, and also the large orchard of Mr. C. P. Byers, president of the Abbotsford Co-Operative Fruit Growers, who is working his orchard on the principles laid down by our society, and it was a real pleasure to drive through it. In no part of the orchard could the work of the caterpillars be observed, and the trees were in the best of health. Other orchards in the same vicinity looked as though a fire had passed through them and scorched every leaf off."

Must Arouse Farmers.

"If these sprayings had been generally used," said Mr. Reid, "not only would the present plague of caterpillars have been averted, but a much more serious result on the apple crop of the province would have been avoided."

There is no real difference in opinion. One and all agree that spraying saves the crops. Many farmers have realized this and have bought the mixtures which are now to be secured so readily. But some there are who are slow to take action. They do not seem awake to the damage these pests do. They need stirring up. Even after the terrible example of this year they will yet need stirring up. That is what the Hardwareman must prepare to do. That is what he must keep continually before him. He must arouse the farmers so that next year they will buy insecticides early and will take steps to protect their trees.

NEXT WEEK'S FEATURES.

Next week's issue of Hardware and Metal will contain an article on sporting goods, illustrated by a picture of a unique sporting goods display in a British Columbia store. "Swat the Fly" will be the theme of another article. This issue will be one of particular interest. Watch for it.

WILL MAKE NAILS NOW.

Mr. J. H. Plummer announced recently that the Dominion Steel Corporation will be ready in a few days to start the manufacture of nails. By putting the wire rods through this finishing process the task of competing with duty-free wire rods from the United States is overcome, as nails come under the protection of the present tariff.

Paint and the City Beautiful Movement

The Best Results Could be Obtained if Civic Committees Would Educate the Public to Exercise the Lawn Mower, Wield the Rake and Replenish the Paint Can—The Holding of Paint Weeks Advocated.

Every place now has its "city beautiful" movement.

It began, as far as can be traced, about fifteen years ago. People had always appreciated the fact that tumbledown fence corners, unkempt lawns and delapidated houses seriously marred the general appearance. It did not appeal to them, however, that any way could be found to improve matters. All attempts at civic beautification took the form of erecting monuments and laying out parks.

Then the thought began to take shape in the minds of certain progressive persons that the way to beautify a city or town was not to lay out a square here and there and put thousands of dollars into bronze statues for a few street corners, so much as to raise the standard of the whole city. They concluded that pretty homes, well laid down streets and neat boulevards were the only features which could make a city beautiful.

From this thought the impression developed that the appearance of a place depended upon the individual efforts of the citizens rather than upon the liberal expenditures of the city fathers. A new sense of responsibility began to spring up. Men realized that they owed it to their neighbors and to the city as well as to themselves to keep their lawns well trimmed and their homes spick and span generally. Civic pride spurred on the procrastinating householder to exercise the lawnmower, wield the rake and replenish the paint can.

The result was an improvement in most cities. Committees were formed, composed for the most part of ladies, with the avowed purpose of furthering the work. Elaborate campaigns were launched. Prizes were offered for the best kept properties. The newspapers took up the cry and stridently urged on all and sundry the necessity of subscribing their best efforts to the work.

Only a Beginning.

Nevertheless, the movement has not passed the swaddling clothes stage. Even in the cities where the agitation has been most persistent and the results most striking, it is plainly apparent that only a beginning has been made. No chain is stronger than its weakest link and no city can really claim the title of "beautiful" until all the unsightly features have been eliminated.

Some of the bad features.

There are so many unsightly features which can be found in any city that it would take a long time to enumerate them all. There is one drawback with which it is desired particularly to deal, viz., the small use made of paint. Walk along any city street, no matter how exclusive and aristocratic, and note the houses. Nine out of ten will show the need of paint. A great many will present that weather-beaten, washed-out appearance which bespeaks years of neglect. Contrast the appearance of the majority of them with the few houses scattered here and there which have been blessed with a new coat of paint. The newly painted house looks bright, new, attractive. It stands out from the rest like a bright colored canary in a flock of sad-feathered swallows. Just imagine a whole street with newly applied paint; then imagine a city made up of just such streets. Surely, the culmination of the city beautiful movement would be reached.

Of course, the possibilities of paint as an agent of beautification do not stop there. While the front fence has become more or less a thing of the past, there are quite a few to be found. In the course of an hour's walk, you may run across half a dozen fences of the old-fashioned kind. It is doubtful if any of them will be in good condition, and paint will be chiefly conspicuous by its absence. The effect of this is bad enough to offset all that the neighbors may be doing for the improvement of their lawns and boulevards. One blot on the landscape in the shape of a tumbledown, lackpaint fence will destroy the whole effect.

The modern fence, the low, iron variety, is creeping into favor very rapidly. People who have well-kept lawns put up iron fences to protect them; and then forget to paint the fence. As a certain philosopher of the vernacular puts it: "Wot's the use?" The good appearance of the lawn is counteracted by the unkempt look of the fence. Paint is the solution, the one sure, cheap remedy for such incongruities.

All of which goes to show that paint is the strongest ally that the advocates of the beautiful movement have. If they would start a paint campaign, they would soon have tangible results to show for their labors. A paint propaganda prosecuted for a month in any reasonably prosperous community would cause the whole place to blossom out in colors as gay as the face of Nature in springtime. The old town wouldn't know itself. And the good work would not stop there. The brightness acquired by wholesale painting would get men fitted with the desire for attractive homes. They would take a renewed interest in the lawn and would prefer pushing the lawn mower up and down to discussing the big league averages with the man next door. The movement would spread. It might even reach the most unreachable of all, the small boy, and teach him to stop cutting the corners of lawns, whittling his initials on fence posts and running through hedges. It might, we say. No rash predictions are made in regard to the small boy.

Hold Paint Week.

It would be a good thing for every municipality if a paint week were held each year. The setting aside of one week when all property owners who possessed the spark of civic patriotism would be expected to hie themselves to the hardware store and purchase paint, would be a step in the right direction.

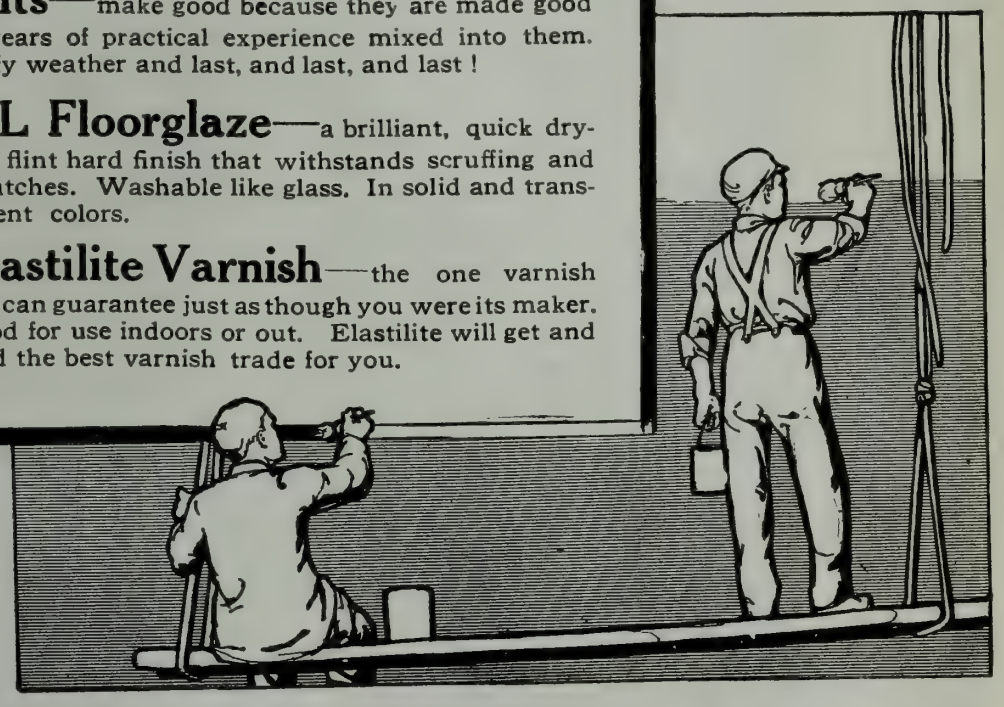
AN ADVANCE MADE.

Cleveland, O., June 27. — The Iron Trade Review to-day will say:

Effective June 26, the leading interest announced an advance in plates, shapes and bars of $1 a ton, and a large independent producer announces that he will make a similar advance on July 1. As a result, consumers have been hurrying to cover their requirements through the fourth quarter, and in some instances, requests have been made to accept tonnage into next year. The mills, however, are not inclined to book so far into the future and none of these contracts were accepted. That the spring buying movement developed as the result of the urgent needs of consumers for material, and was not the result of the low prices then prevailing, is indicated by these advances and the heavy specifications that are being received for all products. In the East, an order has been booked for 3,500 tons of plates on the basis of $1.30, Pittsburgh. Deliveries are deferred from four to six weeks and on plates and shapes two months is demanded by some of the mills. As a result, the output of steel car works has been reduced, and every effort is being made to place orders for plates and shapes with Eastern mills by car manufacturers in the middle West.

The pig iron market is firm but quiet, although some fairly large orders have been placed by eastern cast iron pipe manufacturers.

Wise Dealers Handle the ML Line Because They are Honest Goods That Build Trade.



Our New ML DECORATIVE AID DEPT. Helps You to Get Trade.

ML Paints—make good because they are made good—there's 19 years of practical experience mixed into them. ML Paints defy weather and last, and last, and last!

ML Floorglaze—a brilliant, quick drying, flint hard finish that withstands scruffing and scratches. Washable like glass. In solid and transparent colors.

Elastilite Varnish—the one varnish you can guarantee just as though you were its maker. Good for use indoors or out. Elastilite will get and hold the best varnish trade for you.

GET OUR HELP
Our Decorative Aid Dept. answers your problems in house decoration and painting with free color suggestions, estimates, stencil designs, etc. Stencils sold. You get the right goods in the right shades for best effects in any house. Send for Booklet.

JUDGMENT BEFORE TRIAL

Since the days of Magna Charta judgment has never preceded trial.

To judge the merit or demerit of a paint, it is necessary to know what results are attainable with the use of the paint,

As paint is made to preserve, to protect and to beautify—painting tests should be the basis of your comparisons.

Tell the salesman (with the pleasing story) to show his goods and prove to you what his paint will do.

After the trial render your judgment. That paint which possesses finest texture, easiest working qualities, most uniform covering, farthest spreading and greatest durability, is the paint that will receive your favorable verdict.

Lowe Brothers' "High Standard" Liquid Paint will welcome your judgment "after" trial.

Weekly Market Report --- Paints

PAINT NOTES.

White lead is very scarce, and further advances are not unexpected.

Linseed oil continues firm and none too plentiful.

Advances have been declared in gasoline and benzine.

Business generally is reported to be very brisk.

MONTREAL.

Montreal, June 27.—Still white lead is causing the greatest interest of all the paint products. This is true not only because of its rapid advance and possible —indeed probable—future advance; but also because of the large amount of orders now on hand. Many dealers have contracted for their lead. They are now naturally holding the manufacturers to their contract. Perfectly justifiable this, but there is a tendency of the manufacturers to laugh at themselves.

"We stand to lose everything and win nothing," one remarked. "We take a contract for lead, and if lead falls the customer demands the better price or cancels his order. Of course, we could demand the contract price, but this would not be good policy. When lead advances, as it has recently, every contract is taken. That is what is keeping us so busy now. Those who have contracts are demanding delivery, and those who have not are ordering to get in before the prices go still higher."

The Glass Situation.

The glass situation is still causing some uneasiness, though it is not thought now that there will be any real shortage. An advance in price may be necessary—such a thing has already been discussed by the local handlers—but this will be because the Belgian prices have been raised, and not because the supply is exceedingly low.

The call for mixed paint has continued large. All the cold unseasonable weather seemed to do but little harm. If the weather had been more favorable, and the demand had been larger, the manufacturers would be further behind with orders than they now are.

Linseed.—While there have not been any changes in quotations during the week, the linseed situation is yet causing considerable interest. Supplies are not large. The paint manufacturers are not at all anxious to sell their oil. They prefer to husband their supply in case the crushers may not be able to supply all that will be needed later. As yet there is little indication as to what the flax crops will be. The only thing which seems certain is that the demand for the flax will be greater than ever.

Pig Makes New High Level.

White Lead.—To-day pig lead took another advance, it now having reached a new high level. Of course the price of white lead is dependent entirely upon the cost of the pig. It therefore would seem that another advance toward the eight cent lead which has been predicted may be expected. Manufacturers, however, are anxious to prevent the rises coming too rapidly. They have considered the subject, and have determined that nothing in the nature of an advance shall be made immediately. Yet there is only one indication from the present situation. It is that white lead will yet go higher.

Paint.—The continuance of the heavy demand is the feature here—this and the fact that prices have not been advanced despite advances in the price of products from which the paint is made. It is still said that a rise is to be expected, but such a movement will hardly come in the immediate future.

TORONTO.

Toronto, June 27.—Although the activity in the paint and oil market is not quite as pronounced as it was, there is still a healthy tone to trade. The manufacturers and jobbers report that they have as many orders as they can conveniently handle — in some lines, white lead, for instance, more.

The outstanding feature of the market is the scarcity of white lead. It is felt in all branches of trade—corroder, grinder, jobber and retailer are alike short. There is no white lead in sight just at present here. Some of the jobbers are behind with their orders and in a few cases stocks have been cleaned right out. The consumption has been remarkably heavy.

Oil Remains Firm.

Linseed Oil.—The scarcity of linseed oil has passed. Stocks are now larger, due probably to the fact that the demand from the retail trade has abated somewhat. The price is firm, however, at $1.08 for raw and $1.11 for boiled. It is not anticipated that there will be any reduction in price until well into September at least.

Turpentine. — There has been no change in turpentine, the price quoted locally being 68 cents. This commodity has shown some weakness on the primary market. Demand here is fairly good.

Lead is Scarce.

White Lead. — As explained above, white lead is very scarce. The situation locally is causing some uneasiness, particularly as the retailers are traveling on light stocks and are looking for fresh supplies.

Under the circumstances, it is a certainty that the price will not weaken. It is taken for granted, in fact, that there will be further advances, though just when the next increase is to be expected cannot be said.

Glass.—The glass market is more active and orders are now being placed. Although there is some tendency shown to stiffen prices, it is not general, and it is impossible to say what turn future developments will take.

Putty.—The demand for putty is good. Prices are as follows:—Standard bulk in casks, $2.40; in 100-lb. drums, $2.55; in 25-lb. drums, $2.65; bladder in barrels, $2.80. Pure putty prices are as follows: Bulk in casks, $3; in 100-lb. drums, $3.40; in 25-lb. drums, $3.50; bladder in barrels, $3.40.

Advances Here.

The price of benzine has been advanced 3 cents and gasoline has gone up a similar amount. These increases are due partly to the large consumption.

Prepared Paint.—There is some talk still of an advance in the price of prepared paint. The situation with regard to white lead and linseed oil lends substance to this rumor, but nothing definite has been done.

WINNIPEG.

Winnipeg, June 24.—The advance in white lead has been followed by an advance in paints of all kinds in which it is a factor in composition.

The local trade is exceedingly brisk and painters and decorators have more work ahead than there seems possibility of their accomplishing. There is also a good country business, especially in roof paints for barns, etc.

Oil and turpentine are unchanged. The area under flax in the West is large this year and with a good harvest flax seed should be plentiful at a reasonable price. There has been a slight weakening of flax prices both at Winnipeg and Duluth during the past week.

There is a steady trade in lubricating oils and advance orders for harvest and threshing supplies are already coming to hand.

Dependon——Light Hard Oil Finish.

Everlastic——Quick-drying Floor Varnish.

Gold Medal——Inside and Outside Varnish.

—These three varnishes meet all the regular demands of your trade—simplify your varnish stock—increase your varnish profit.

If any part of your house or your customer's house, is in need of varnishing, the requirement is met by one of these three B-H Varnish Specialties—Gold Medal, Everlastic, Dependon.

GOLD MEDAL.—If the front door, porch, ceiling of bathroom wants brightening, Gold Medal, Inside and Outside Varnish, gives pleasing results with its easy flowing action, and will protect the exposed surface with a durable coating, which will fight the effects of moisture and changing temperature.

DEPENDON.—If the furniture, wall, inside door, or any interior work, of either hard or soft wood, is in need of finishing or renovating, Dependon dries free from tack in a few hours, and can be polished, if desired, in twelve, stands hard wear and dries with a brilliant lustre.

EVERLASTIC Quick-drying Floor Varnish has these special qualities. It dries hard and makes a very durable coating. It is elastic and tough. It does not show heel marks nor scratches easily. It dries quickly. Has a fine lustre, and can be walked on the next day after application.

These varnishes are sold in beautiful, lithographed gallon, half-gallon, quart, pint, and half-pint cans, imperial measure. The packages make a most attractive store display. Handsome lithographed illustrated signs will accompany your order.

Write for favorable quotations. Address our nearest office.

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

In every part of the Dominion live, wide-awake Hardwaremen are increasing their profits and selling satisfaction by featuring "MINERVA" Paints—the famous British Brand—The "MINERVA" Line always opens up clean-cut, fresh and reliable—its reputation for quality is unrivalled. Are you making the most of your paint department? The "MINERVA" Proposition is the surest road to success.

Full Imperial Measure in Every Can.

ASK ANY MINERVA AGENT

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.
377-387 CARLAW AVENUE, TORONTO
Established in England in 1834

(M-3)

Steel Tanks and Self-Measuring Pumps for Paint Oils

They avoid all the loss and inconvenience sustained under the old method. The steel tanks are air-tight and will not permit the oil to gum or stick. The pumps measure the oil according to the Imperial Standard, directly into the customer's can. They count the gallons pumped and compute the charge for fractional gallons.

THE BOWSER PAINT OIL SYSTEM

will put every cent of profit into your pocket, where it belongs. With a Bowser your paint oil department will be as clean and inviting as your shelf hardware department. It draws trade.

Why not investigate now and increase your paint oil profits. Your fellow merchants are using them. They'll help you. Ask for book No. 15.

Putty—Casks, $2.90 per cwt.; bladders, in barrels, $3.15; bladders, 100-lb. cases, $3.40.

Paris Green—22 cents per 112-lb. drums.

When East Meets West

(A SHORT STORY)

Some time ago a Hardware merchant from one of the Maritime Provinces, who was on a pleasure trip through the West, met a fellow dealer who had recently opened a large store, in one of our Far Western Cities.

During the conversation the Easterner asked the Westerner what Paint he had decided to carry.

"Jamieson's," said the Westerner. "I congratulate you, sir," said the other. "I have handled Jamieson's Paints and Varnishes for many years, and in my opinion, there are none better made in Canada—and you are dealing wth a reliable house."

This story came to us through the Western dealer, and goes to show what our customers think of our products.

Why not get the benefit of our reputation?

QUALITY

QUALITY LINKS PAINT-TO PROFIT

"Quality" is the strongest link in the business chain—high quality is the link that holds trade — that binds the interest of the buyer and seller together. The qualities that make

MARTIN-SENOUR PAINT
100% PURE

the best for the paint man to sell, make it the best also for paint users to buy. The first sale settles the question of *quality* in the paint user's mind, because he discovers the other links — economy and durability — are as strong as the link *quality* and his satisfaction is complete. Sell that kind of paint and profit by the satisfaction that brings the buyer back again and again. Write today for the agency.

Pioneers of Pure Paints
MONTREAL CHICAGO WINNIPEG LINCOLN

Some People Don't Know a Good Thing When They See One

But everybody knows a poor thing when it comes their way.

Which means that when you sell a customer something which is good, you may hear no more about it. But if you sell him something of inferior quality you may be sure that you will hear all about it later.

Dougall Varnish is Made to Give Satisfaction

The Dougall Varnish factory is new and all the methods most up-to-date. The ingredients used in the manufacture of Dougall Varnish are all of the very finest quality. The workmen employed in its manufacture are the most skilled, and the system of inspection is the most rigid. No varnish leaves the factory unless it is right up to standard. Therefore DOUGALL VARNISH can be depended upon.

THE VARNISH THAT LASTS LONGEST

The Dougall Varnish Company, Limited

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

If You sell one FORD BIT EXTENSION You'll sell more

We say this with outmost confidence, and we unhesitatingly make this statement because we know just why you will sell more if you will but show a man the Ford's qualities.

The FORD'S Bit Extension is new; is remarkably simple in construction; embodies all the best points of other makes; has several exclusive features; and is entirely devoid of any of the clumsy, awkward features that have made former extensions so unsatisfactory.

Simplicity is the Keynote

throughout the FORD'S construction. It is easy to adjust, easy to work, and cannot get out of order, as there are no breakable parts. This latter feature gives the extension exceptional strength as well.

Electricians who are now using it give their highest endorsement and say it is unquestionably the most practical ever produced.

If you are the first in your territory to introduce Ford's New Bit Extension you will surely gain new customers who will be steady, satisfied buyers.

Will you write us for new circulars describing in detail this latest FORD Triumph?

ROSS BROS. Ltd., EDMONTON | **CANADIAN FAIRBANKS-MORSE CO.,** WINNIPEG - - - SASKATOON | **METALS Ltd.,** CALGARY

"Hercules" Drills Are Not Made By The Taking-Away Process

The goodness of "Hercules" High Speed Twist Drills is the result of the Twisted-While-Hot Process. The Vanadium Steel, from which "Hercules" Drills are made, comes to you with its strength unimpaired in the grain or in its lasting quality. Other methods of drill manufacture remove the strength-giving quality of the metal and produce drills without a backbone. "Hercules" Drills have the taper shanks, usually one size larger than regular, which eliminate tang troubles and give greater driving power, owing to the firm hold of chuck which grips the drill in the centre. Your jobber can supply you or you can order direct.

Quality Did It

Back in 1864 the Nicholson File Co., started making files with an output of 100 dozen a day to supply a local market. At the present time the files made by the Nicholson File Company sell at the rate of 16,000 dozen a day, and the market is the whole civilized world.

These are the well-known brands made by the Nicholson File Co., in Canada.

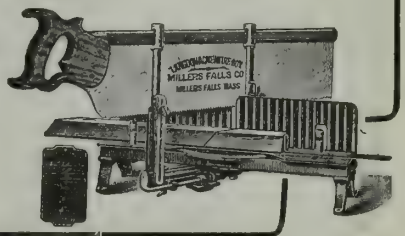
"American"
"Arcade"
"Great Western"
"Globe"
"Eagle"
"McClellan"
Kearney & Foot
"J. B. Smith"

All steel used in Nicholson Files is made strictly according to our own specifications which have been adopted after many years of experiment. And we use different grades of steel for different kinds of files. As a result Nicholson-Made Files are the fastest cutting tools of their kind in the world.

Your Jobber Can Supply You

NICHOLSON FILE CO.

PORT HOPE, - ONT.



PERFECT MITRES
are always made with
THE LANGDON ACME MITRE BOX

When supplied with back saws fitted by ourselves, they are warranted to do perfect work.

QUICKLY ADJUSTED FOR ANY ANGLE. Some of the advantages over older models are :—In longer guides, which hold the saw steadier. These guides are provided with elevators to hold the saw stationary, when desired, above the work. In a graduated arc showing the various angles commonly used. In supporting guides, to hold the work in place. In an appliance for quicker adjustment of extension lever. In a length gauge for duplicate lengths.

These boxes are made in three sizes, and put up with varying sizes of saws, ranging from 22 x 14 in. to 30 x 5 in.

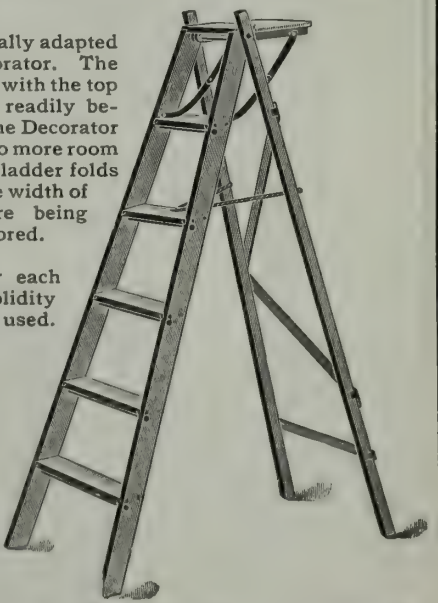
WHY NOT SELL THE DECORATOR STEP LADDER?



It Pays Good Profits and Gives Satisfaction

This ladder is especially adapted for use by the Decorator. The Shelf is nearly level with the top step and folds down readily between legs so that the Decorator with shelf takes up no more room than without. The ladder folds compactly within the width of the risers, therefore being easily carried or stored.

A rod passes under each step, assuring solidity and the rope lock is used.

Shelf is extra.

Put this ladder in stock at once—The result will surprise you.

Write for complete catalog on ladders.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

"Scheip's Perfect" Patent Nestable Stove Pipe

The Best on Earth

Anybody can put it together. Hands are the only tools required. 6 in. and 7 in.

Requires no staples.
Locks easily and securely.
When put together is equal to riveted pipe.
Every length guaranteed to fit perfectly.
Oiled to prevent rusting.
Packed 25 lengths in a crate.

It is cheaper to buy "Scheip's Perfect" in crates than to make your own pipe, or pay the freight on riveted pipe.

The crating lessens your freight charges, and the pipe you get is "Perfect" —as its name implies.

When you are ready to stock up with stove pipe accessories, tell us.

We have everything you need—Elbows, Dampers, Half-lengths, Damper-lengths, Tees, Tapers, Thimbles, Plugs, Chimney Caps, Ridge Pipes, Side Roof Pipes, Stove Boards, etc., for all sizes from 3 inch. to 8 inch.

Our prices will be quoted on request—you will find them reasonable.

Not an Enterprise for the "Quitter"

¶ "If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom.

¶ "He must know before he begins it that he must spend money—lots of it.

¶ "Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.

¶ "Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

You can talk across the continent for two cents per word : : : with a Want Ad. in this paper. : : :

ROGERS'

PORTLAND CEMENT

Brings Big Results to Every Dealer

Cement is now being specified by many contractors in the construction of residences and other small buildings. Why not stock **Rogers' Portland Cement** and solicit the contractor's patronage? This cement is well and favorably known and pays a very attractive profit.

It is a cement upon which you can absolutely rely to give perfect satisfaction.

Rogers' Portland Cement has great strength, sets evenly and is absolutely uniform in its action. Its weather resisting qualities cannot be equalled.

We ship promptly.
Give it a trial.

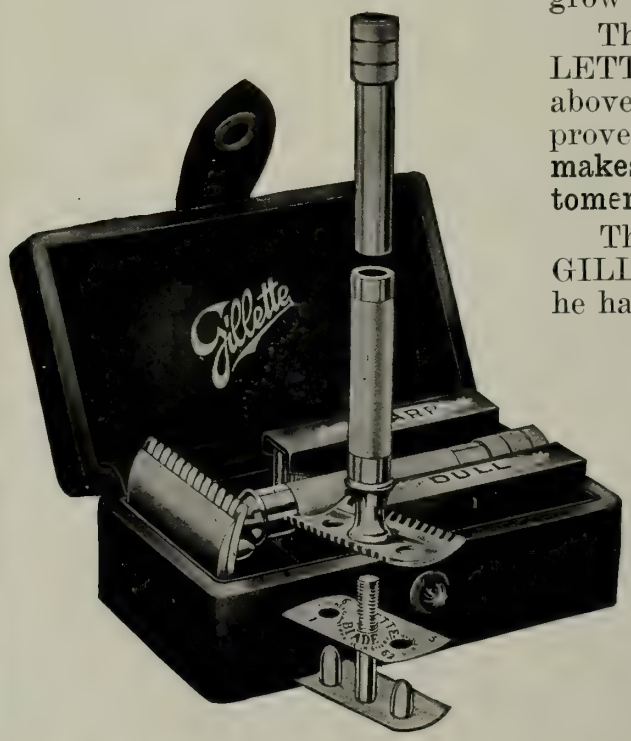
ARE YOU MISSING OPPORTUNITIES?

The problem of modern business, from manufacturing to retailing, is to eliminate lost motion and make the most of every opportunity of increasing legitimate profits.

Are you, as a retailer, giving to this problem the attention which it deserves?

Have you figured out which lines in your store pay best, in immediate profits, in future business, and in permanent good-will? And do you focus the attention of your salesmen on these lines?



Have you pointed out to them, for instance, that the sale of a

GILLETTE SAFETY RAZOR

is worth more to your store than the sale of any other razor?

It is not so much the immediate profit—though on the price-protected GILLETTE you are sure of a substantial reward for every sale.

Nor is it chiefly the future sales of blades—though the man who comes into your store regularly for GILLETTE Blades is pretty sure to grow into a good all-round customer.

The big advantage in selling the GILLETTE Safety Razor—in recommending it above any other razor made — lies in the proven fact that **every GILLETTE sale makes a pleased customer. A pleased customer comes back—that means a lot.**

The keen, convenient, business-like little GILLETTE gives a man the kind of a shave he has longed for, but scarcely expected to ever enjoy. With it he can save half the time his shave used to take, escape all the nasty gashes and enjoy solid comfort. And, mind you, these are the things he will appreciate

Analyze this razor question carefully—weigh the returns, present and future, from the GILLETTE and the others, and we are willing to leave the decision to your good judgment.

GRIT

The special fitness and value of Magnolia Metal for bearings which are subject to **grit and dust** has always been most noticeable and is frequently commented upon by Engineers as shown in the following letters.

THE CLEVELAND TRINIDAD PAVING CO.
Cleveland, O., Branch Johnson City, Tenn., Dec. 15th, 1911.

Gentlemen:—
We have used "Magnolia" exclusively the past three years on the asphalt plants of this Company that have been in my charge in Oklahoma City, Muskogee, MacAlester, Emporia, Kansas and Johnson City, Tenn.
Have used it on Westinghouse, High Speed and other Engines, also on bearings that were subjected to much **sand and grit**, and find it the nearest to "perfect" of any anti-friction Metal.

Very truly,
CHAS. R. COOPER, Plant Supt.,
The Cleveland Trinidad Paving Co.

HOWARD TRUMBO, Contractor.
Key West, Fla., Nov. 23rd, 1910.

Dear Sirs:—
I have used MAGNOLIA METAL for the past 15 years, and found it satisfactory in every respect. Used it in thrust bearing, crank and cross-head bearing of the Steamer Bolivar; for the Union Bridge Co., and was on steamer for 18 months; when I left every bearing was O.K., and used it on several other steamers and tugs, also stationary work, and it gave perfect satisfaction. The last time I used Magnolia Metal was on the Hydraulic dredge Minikee, on the pump bearing, especially the bearing next to the pump, where **sand and grit** from the pump gets in, a stream of water is pumped next to bearing to keep **sand and grit** out or away from said bearing, and after 8 months' work this bearing was found in first-class condition, and started on another job last March, and it was still running when I left to take my present position with the Government, Quart. Master Dept., Key West, West Barracks, Fla.

Yours truly,
ALBERT DI NEGRO,
Chief Engineer, Ocean Steamer.

SPECIAL OFFER

PRACTICAL ENGINEER POCKET BOOK, 680 pages, over 2000 subjects. Price 40c. post paid. We do not aim to make a profit on these books. We buy them in large quantities as an advertising medium and give Engineers benefit of low price. They are highly spoken of by Engineers. Address Montreal office.

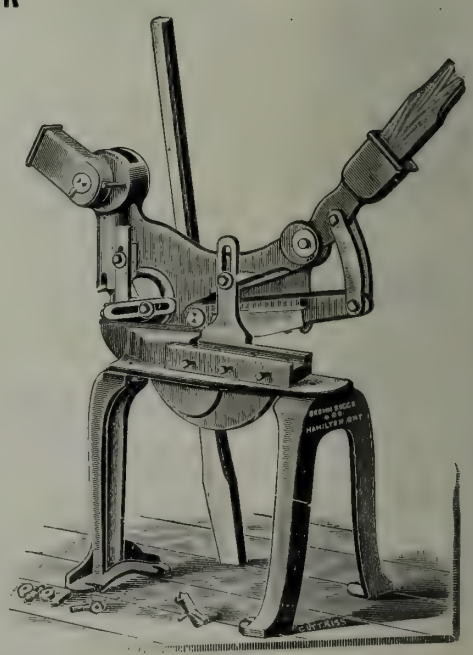
A Necessity to EVERY DEALER Who Handles Sheet Metal!

Our Combined Lever Punch and Slitting Shears



SAVE MUCH TIME AND LABOR

THIS is a machine that is constructed of the best material and made to stand years of hard service.

If you handle sheet metal and are not now using one of these machines you should install one at once. You will find it **indispensable after a trial.**

They slit any length or width of sheet required up to their capacity. Made in two sizes, viz.—Nos. 10 and 11. No. 10 will slit No. 12 gauge sheet iron, soft steel or bar iron 1/4″ x 2″ or 3/8″ round, and will punch a 5/16″ hole in 1/4″ iron or its equivalent in lighter metal.

No. 11 is the same as No. 10, only heavier and will cut No. 10 gauge sheet iron or punch a 3/8″ hole in 1/4″ iron.

Write for Full Particulars and Discounts.

THE NAME "YALE" HELPS MAKE THE SALE

YALE

A New Door Check Called *Yale*

YOU, as a hardware dealer, will be interested to know that we are placing on the market a "door-checking" device better than our Blount Door Check.

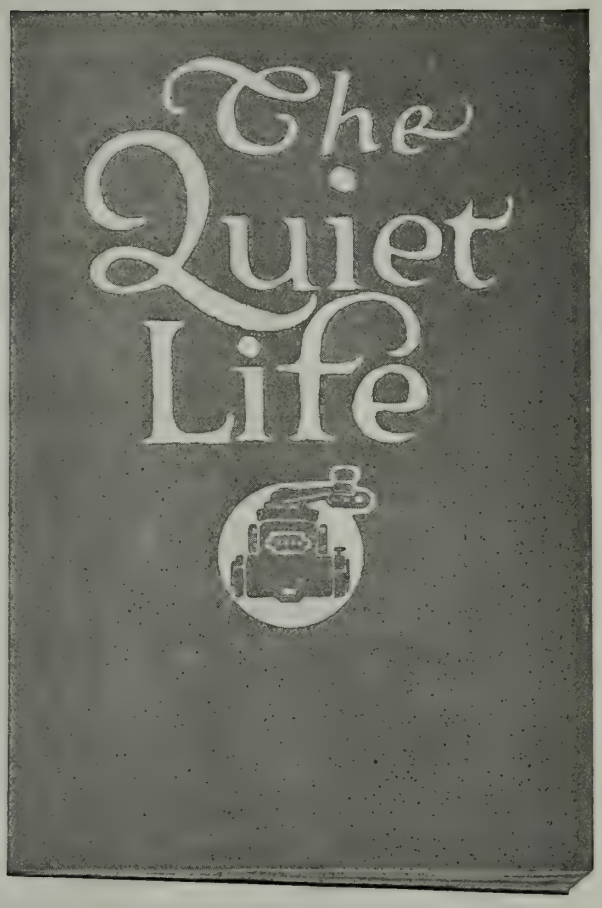
A New Yale Product by the makers of Yale Locks and Hardware, embodying the same high quality as all other Yale Products.

The Yale Door Check is based on the time-proven fundamental principles of the old "Blount" check, but so improved in construction that it stands as a distinctly new product.

C-74

We are proud to give this Check the name "Yale" because we know it to be the most thoroughly ideal device for its purpose that modern science and 20 years of experience can produce.

It is made in sizes suitable for all doors and conditions of use; and with "holding-device" when desired.



How we help you to sell Yale Door Closing Devices.

IN addition to advertising the Yale Door Check in the magazines we have prepared material which will help hardware dealers the country over to market this product.

The Quiet Life: A book which is neither serious minded nor very educational, but it is calculated to make the reader a purchaser.

A window display which will really sell door checks. It is extremely novel and calculated to stop any but the busiest passer-by.

Street Car Cards for those who are doing this form of advertising.

This book will be supplied in quantity, imprinted with the name and address of the dealer carrying Yale Door Checks in stock. It is carefully printed in two colors and adequately illustrated. Ask us for a copy.

Yale: a New Door Check. A book which explains pretty carefully the more important improvements of the Yale Check over the Blount; profusely illustrated.

Cards and Hangers printed in two colors with strong selling talk.

Newspaper Cuts either with or without text, as desired.

Write to-day for samples of this material and further information about our Dealers' Advertising Service. Our help is free to every man who stocks Yale Products no matter from whom he buys them.

CANADIAN YALE & TOWNE LIMITED

Makers of Yale Products in Canada: Locks, Padlocks, Builders' Hardware, Door Checks and Chain Hoists.

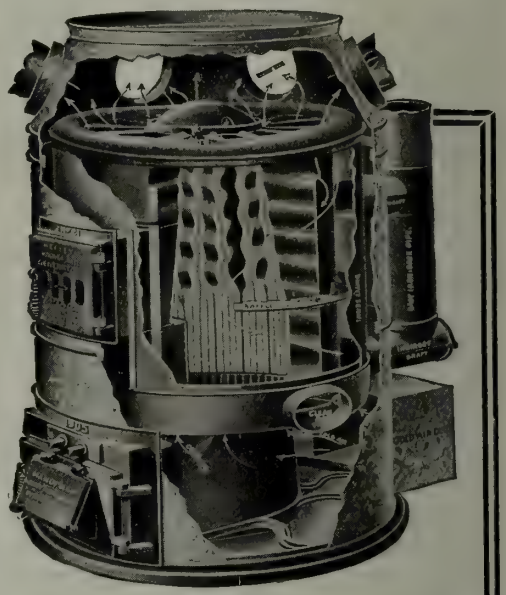
One of the zig-zag tubes

A Quick Seller and Good Profit Producer

Now is the time when every progressive dealer should stock furnaces, but when doing so he must select the kind that will be of greater benefit to his business.

The "KELSEY" Warm Air GENERATOR



is built on an entirely different principle than the ordinary furnace. The construction gives the "**Kelsey**" more than double the weight and heating surfaces with the same sized grate.

The Zig-zag Tubes are a Special Feature

These tubes surround the fire and form the fire cylinder and combustion chamber.
They are in contact with, and overhang the fire, and are heated on all sides by conduction, by radiation, and by the burning gases—all heat being utilized to the utmost.

Each heat tube has **eight square feet of heating surface,** and there are from **eight to sixteen in each heater,** according to its size and capacity.
The "**Kelsey**" saves fuel, and with the same amount of fuel will warm greater volumes of air than any other furnace.

Investigate. Write for full description and testimonials. Make better furnace profits this fall.

THE

Jas. Smart Mfg. Company

Winnipeg, Man. **LIMITED** **Brockville, Ont.**

YOU CAN MOVE BACK THE HANDS, BUT NOT THE TIME

If you do not sell cement now, make it a point to stock an order at once.

Rogers' Portland Cement

pays a very attractive profit and the demand will continually increase.

Act quickly or you will be losing profits which you would otherwise have procured, you may not think so now, but you will realize it in the near future. Then it is too late—you have lost money—your competitor may have the trade in your locality.

ROGERS' PORTLAND CEMENT is a product of unrivalled quality, greatest durability and highest efficiency, and is specified by architects for modern houses.

The New Preston O. G. Square Bead Eavestroughing

We have always claimed that our eavestroughing was the best on the market, but we have gone ahead and gotten out something that is far superior to our old make. Now we can claim that we can't be beat when it comes to our eavestrough.

Some time ago we advised all the trade that we were manufacturing O. G. Square Bead eavestroughing by machinery which assured absolute uniformity in shape, but it developed that our machinery was not heavy enough to produce as sharp a bead as we desired. We have now perfected and patented automatic steel dies to fit our large power press and we now guarantee a trough superior in shape, appearance and fit to any other on the market.

You can save time and solder in the erection of this eavetrough FOR EVERY PIECE IS EXACTLY THE SAME and fits snug and tight. There are more profits for you and more satisfaction if you use our make. See our special offer below and take advantage of it at once.

Cut out this ad. and mail it to us to-day with your order for 250 feet of our new O. G. S. B. Eavestrough and if it is not exactly as we represent it we will make you a present of it. This offer is good for thirty days.

REED'S
ARMSTRONG PATTERN
ADJUSTABLE
STOCKS and DIES
GUARANTEED THROUGHOUT

Dies in these sets have chasers set at unequal angle. In this way they are given what is termed a rake. This term rake means that the chasers are inclined at an angle with the surface of the pipe in such a manner that, in threading, the material is cut or shaved off, rather than scraped off.

This feature, together with special angle of throat, relief of chasers and relief of throat, results in cleaner, smoother threads, easy cutting and lasting qualities not possessed by other dies.

Set No.	Length of Stock	Size of Dies
2A	35 in.	1/4, 3/8, 1/2, 3/4, 1 in. R.H.
2½A	38 in.	1/2, 3/4, 1, 1 1/4 in. R.H.

Keeping the Stock on the Move

The Advantages of Changing Goods Around Regularly—The Stock Acquires a New Look — Attractive Goods, Bright Labels and Fresh Colors on Every Hand Cause Money to Burn in the Customers' Pockets—On Entering the Store People are Confronted With an Array of the Goods They are Most Likely to Need.

(By Ray Best, of Campbell & Best. Peterboro.)

It is a recognized truth that the hardware store must be rendered attractive nowadays to draw trade. This is due to two controlling causes. The hardware store is now catering to women as well as men; and the stock carried is wider and more varied, including certain lines which must be attractively displayed if sales are desired.

One of the big problems facing the hardware dealer, then, is to find the means to make his store clean, bright and inviting in appearance and thus to attract all classes of trade. Prime factors in the attainment of this object are: An attractive store front, a neat arrangement of stock, good fixtures, elimination of crowding, getting plenty of light in the store. Circumstances sometimes conspire to prevent the dealer from carrying out these ideas. His premises may be so small that it is impossible to avoid overcrowding and equally impossible, therefore, to keep the stock neat, Environment may prevent the entrance of much light into his store. There is one factor, however, which is most important in rendering the store attractive to customers, one which every dealer finds it within his power to use—keep the stock "new."

BRIGHT SELECTIONS.

The only way to keep the stock perennially new is to move it around.

A rolling stone gathers no moss and a moving stock has no chance to accumulate dust and that long-in-stock appearance which sends the customer in search of another store.

People demand something new all the time, as the price of their attention to the goods in your window.

There are many lines handled by the hardwareman which are from their very nature slow sellers. They are likely, therefore, to stay some time in the store and thus to accumulate dust. It is not uncommon for certain sections of a store to remain untouched for months, because there has been no call for the goods which occupy that section. What is the result? The goods begin to look dull and old. Customers gain the impression that the stock in the store is out of date. The effect of seeing the same old goods in the same old place every time they enter the store is far from a good one. They conclude that the establishment is antiquated, most completely out of date.

On the other hand, the impression made upon customers by a stock which has the appearance of being quite new

Interior of the store of Campbell & Best, Peterboro—The stock in this store is moved around to suit the season.

is most striking. Attractive goods, bright labels and fresh colors on every hand—no wonder that money burns in the pocket of the customer.

Move Goods Around.

The only way to keep the stock perennially new is to move it around. The assiduous and daily use of the duster and broom are necessary but the arrangement of the goods must be changed as well. A new arrangement makes the goods look new.

There is another advantage attained besides creating the much desired air of "newness." By moving the stock around the most seasonable lines can always be kept to the front. The store which has the same goods in the same place week in and week out—you can finds lots of this kind—may appeal to some of the people some of the time but there will be times when it will not appeal to any of the people. To appeal to "all of the people all of the time," it is absolutely necessary that the store should be featuring the most seasonable goods at all times.

This necesitates considerable and continual work in rearranging the interior, so that each season's best sellers are brought forward. The work brings an ample reward.

Methods Adopted.

We believe in moving the goods in our store around as much as our facilities permit. We have a line of tables on one side of the store, running about half way to the rear. These are used for the display of strictly seasonable goods. Part of the counter is used for the same purpose. During the latter part of May and early June, these tables were used for such goods as would appeal to people looking for wedding presents. Varying the display to suit the rapid change of the seasons and the vagaries of demand, we show paint, builders' hardware, skates, preserving kettles and so on. On entering the store, people are confronted with an array of the goods they are most likely to need. The goods are placed where they cannot be overlooked. They are almost in the way of the customer.

We find this method of display is productive of the best results. Goods, which otherwise might have gone unnoticed, are purchased by customers. The prominence of the article calls it to the attention. It has an indirect effect on sales also. People who lack the immediate necessity for a certain article, come back later and purchase.

Stoves to the Front.

In accordance with our policy of "interior rejuvenation," we believe that in the fall the stove stock should be brought to the front. Accordingly this row of tables is swept out and the goods displayed thereon are relegated to less conspicuous places. The tables are placed temporarily in the cellar. The space thus rendered vacant is used for stoves and we find that the prominence thus given the line helps our stove sales.

The same plan is followed in all parts of the store. We keep the goods moving. A rolling stove gathers no moss and a moving stock has no chance to accumulate dust and that long-in-stock appearance which sends the customer in search of another store.

The same argument applies to the windows of the store. Displays should be changed often. Permanence in the interior arrangements is not nearly as damaging as permanence in window displays. People demand something new all the time as the price of their attention to the goods in your window. Give it to them. We make a point of dressing our windows at least every two weeks and the system is bringing the best of results.

The Strength of the Local Hardwareman

In His Fight Against Mail Order Buying He Has Two Allies, Quality and Service—If He Convinces Customers That He Can Give Better Quality and Quicker Service, His Trade Will Not Suffer.

Money, it has been said, is the root of all evil; a fact which has merely made many wish that they were better rooted. However, that may be, it must be stated here that there is an exception to the general rule. Women, as well as money, are responsible for the mail order evil. They are the ones who study the catalogues sent out by the catalogue houses. They are the ones who tempt the men in the family, holding out to them some price-inducement for an article which they know the men need.

If the men were left to themselves they would bother but little with the catalogue houses. As it is, however, there are sections where the parcels trade is so large that it is doing much harm to the local hardwaremen. The women want to send a good-sized order, and so get their husbands to buy some of the things they need from the mail order houses.

Must Show the Weakness.

Now a man will do what his wife wants as long as he thinks he does not suffer by reason of this. There remains therefore, but one thing for the hardware dealer to do—that is, the hardwareman who finds himself in competition with the catalogue houses. He must show the husband that he is losing by sending his order along with his wife's.

It is quite a question how this is to be done. Since the catalogue houses make their boast that they sell things cheaper, it is hardly likely that the local hardwareman will be able to beat their prices. But price is only one factor in a purchase. Service is of even greater importance. Convince a man that he will get better service from an article purchased from the local hardware dealer, than he will from what is sent him by the catalogue house, and he will buy in his own town.

Where Mail House Can be Beaten.

Now it would seem there are two things on which the local dealer can beat the catalogue house. One is Quality, and the other is immediate service. A man, when he wants an article, wants it to give him good service. If the case is put to him properly he will be willing to pay a little more to get a better article. The thing is to convince him that you have the better article.

How to do this is not easy to explain. It must be stated though that the best way is to make it a point to carry the best—the most reliable lines. Those who have used these will speak well of them, and so they will come to be known, and your business will be advertised.

It is a good plan, too—indeed this is but another way of stating what has already been expressed—to carry standard lines. These will be familiar to all customers by reason of the advertising which the manufacturers have done. The catalogue houses can hardly sell these lines; and it will be easy for a good salesman to convince a customer that the well-known article is better than the one made by some party or parties unknown, which the catalogue house sells at its reduced figure.

Immediate Service.

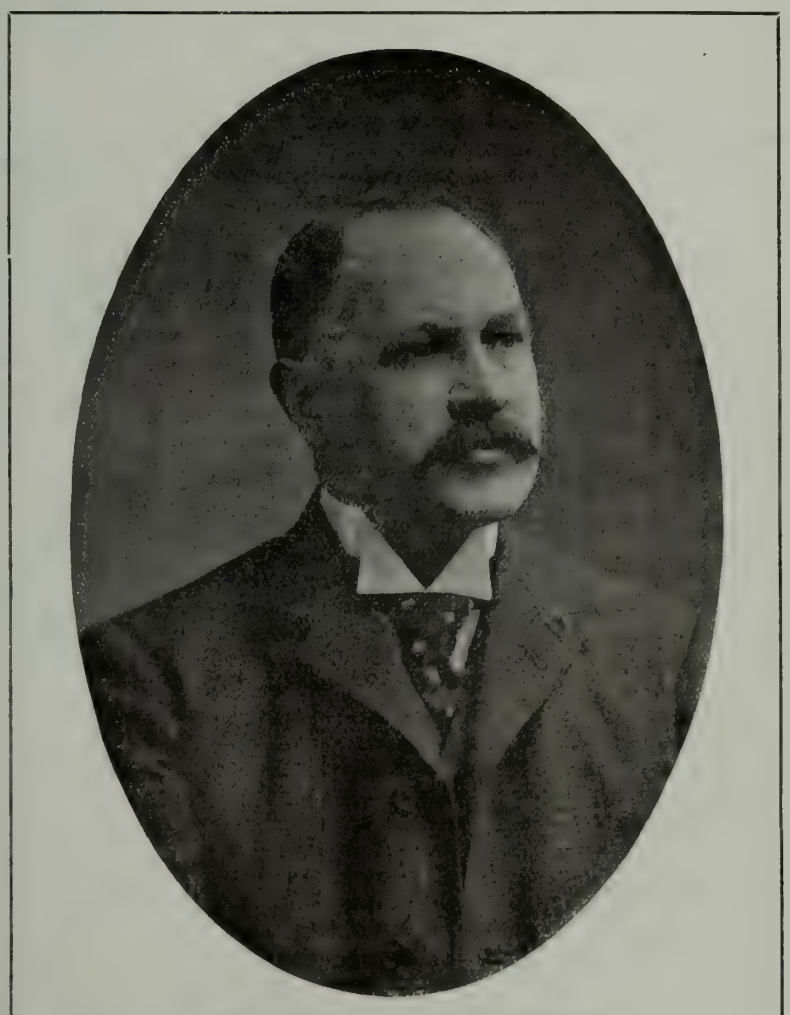
As great in importance almost as the problem of quality is that of Immediate Service. When a man decides to buy an article, he wants it at once. If he comes to the local hardware store he can get it at once. If he buys through the catalogue house he will have to wait a week or more. Time is money, and that week's wait means money to the purchaser. It means that some work, for which he wants the article, is being held back. If this wait were necessary the man would not mind, but supposing he

(Continued on page 45.)

The Sudden Death of Thomas G. Dexter

One of the Best Known Men in the Hardware Business in Canada Passes Away—For Thirty-two Years Was With H. S. Howland, Sons & Co.—A Brief Sketch of His Career.

It was with a distinct shock that the news was received on Wednesday of the death of Thomas G. Dexter, of H. S. Howland, Sons & Co. Few men were as well known in the trade, none were known better, and his acquaintanceship extended from coast to coast. He was in every sense a national figure in the hardware field. His death has, therefore, created profound regret among hardwaremen in all parts of the country.



He had been far from well for the past six months, being troubled with heart weakness. Nevertheless he had seemed no worse than usual, and left at the week-end to spend the holiday with his family at Jackson's Point. On Monday morning he took part in a bowling match, and showed a keen interest. He was an enthusiastic bowler, and of late years this had been practically his sole recreation. At noon, he was taken quite ill, and continued so through the day and night. The end came at four o'clock the following morning.

The late Mr. Dexter was born 57 years ago in Toronto. He secured a good High School education and, on leaving school, started in the commercial world. He was first engaged in the wholesale dry goods business, and from there went into a fancy goods house, where he was associated among others with H. H. Fudger, now general manager of the Robert Simpson Co. His next move was into the hardware business, joining H. S. Howland, Sons & Co., when that firm was inaugurated, thirty-two years ago. With the exception of one break of about 18 months, he has continued with the firm ever since, a long period of faithful and efficient service.

The first position that he held with the firm of H. S. Howland, Sons & Co., was that of warehouse clerk. He then went out on the road, traveling for the most part in Ontario. For a term of years, however, he covered the whole of the West from the Great Lakes to the Pacific coast. On the death, some twenty years ago, of Col. Miller, who had held the position of manager and buyer, Mr. Dexter was promoted to take his place. The scope of the business grew to such an extent that of late years he has devoted his whole attention to the buying department.

As a buyer, he was pre-eminently a man of sound and discriminating judgment. He knew hardware and hardwaremen so well that his management of the buying was distinguished by rare foresight.

The single break in his record of service with the firm came about the year 1884, when he went over to Risley & Kerrigan, wholesale hardwaremen, a firm which has been out of business many years now. He soon returned, however, to the firm of H. S. Howland, Sons & Co.

THE LATE THOMAS G. DEXTER

A Wide Acquaintance.

It will thus be seen that the deceased enjoyed a very wide acquaintance with all branches of the trade. His experience on the road brought him in contact with the retailer, and he has friends among the retail trade in all sections of Canada. As buyer, he had dealings with every factory and manufacturer concerned in any way with the hardware trade, and his acquaintance is even wider in that branch.

The fact that he was unusually esteemed has been brought home since the announcement of his sudden death. Messages have poured in from all sections, bearing condolences and sincere expressions of the regret that is felt.

President of Association.

The deceased was one of the prominent members of the Wholesale Hardware Association, holding the position of president four years ago.

He did not take an active part in public affairs, preferring rather to concentrate his energies on business matters. He served as a member of the Board of Trade, and was on a number of committees. He did not, however, seek public office and, although a life long Liberal, he did not participate actively in political matters.

He belonged to the A. F. and A. M., and was a member of the National Club.

The deceased was married twice. By his first wife, he had one son, Thomas, with the Toronto Electric Light Co. His second wife and four children, three girls and one boy, survive him.

THE USE AND ABUSE OF HOLIDAYS.

The custom of employers giving holidays to staff members has become more general of late years. This is as it should be, for it is in the interests of both employer and employe that the latter should have an opportunity to rest for a certain period each year, and thus recuperate his powers. The employer who looks at the matter in that light will be quite willing to give each member of his staff the privilege of an annual rest.

The fact should not be lost sight of, however, that the granting of holidays is intended for mutual benefit, and that the employer must benefit quite as much as the employe. The former gives the holiday in order that the latter may return to work with renewed vigor and a keener interest, and with faculties sharpened to the point of highest efficiency by the rest and relaxation. The employer is entitled to this share of the benefit.

The employe benefits doublefold from opportunity to rest from work. He probably needs the rest in the first place. In the second place, he is afforded an opportunity to improve his own usefulness for the following year. A holiday well spent sends a man back to work with higher ambition to advance himself.

This is the real use of holidays. The abuse consists in utilizing the time of rest to plunge into a continuous round of riotous gaiety—excursions, all night trips, fatiguing pleasures, cramming the largest possible measure of excitement and strenuous exertion into the time allowed. The sequel to such a holiday is that the employe returns to work jaded, more tired than when he left, lacking in ambition, initiative and the desire to promote his own and his employer's interests. This form of holiday abuse is very common, unfortunately. It is foolish, unfair and detrimental to the interests of all concerned.

TRAINING FOR SALESMEN.

More and more has there arisen talk of schools for salesmanship. Dealers are realizing that good salesmen mean almost as much to them as do good goods to sell. It is little wonder, therefore, that they should be considering means by which their good salesman may become better, and by which even the mediocre salesmen may be so inspired that they will awake and enter into their task with genuine enthusiasm.

In a number of the large department stores regular classes in salesmanship are being held. A young college girl, who entered one store as a clerk, showed such ability that she was asked if she could teach her principles to others. She said she could, and the fact that her salary was raised within six months from $8 a week to $20 a week seems to indicate that she succeeded.

Salesmanship in hardware is somewhat different from other salesmanship, however. It requires the same courteousness, the same interest on the part of the seller. But it requires a much greater amount of technical knowledge.

It is this technical knowledge which must be remembered when training hardware salesmen is considered. This technical training can hardly be secured without the co-operation of the manufacturers. They have the means of explaining, and of illustrating what is explained. Salesmanship classes, to reach their highest point, must have the co-operation of the manufacturers. The only question is whether these will be willing to co-operate. If they think the matter over—and see that the benefits would be theirs as well as the retailers—they probably will decide to do their part. This seems a case where a Moses is needed to lead on. Schools of salesmanship in many hardware lines would mean a benefit for all. They might well be started without further delay.

TWENTY-FOUR HOURS A DAY ENTHUSIASM.

"The trouble with the hardware business," remarked a dealer who has made a success of it, "is that a man has to be constantly at it. He has to spend long hours in the store, and he has to take his business home with him. He need not worry about it at night, but he must have his eyes open for ideas if he is to make a success."

The dealer was undoubtedly right, only what he said applies to practically every business. Any concern to be successful needs that kind of leadership—leadership by a man, who, whether he works long hours or not, always has his business in mind, and who is ever ready to seize upon some thought which flits through his brain, or which is uttered by another.

Balzac, in his essay on "The Lost Masterpiece," says, "No painter should think except with brush in hand." Neither should he. If he is to be a good painter, he must think as a painter.

Stevenson, who did much of his writing in bed, always had a pencil and pad of paper by his side. Often he would wake in the night, and reaching for paper, would put down the thought which had flashed through his mind. So were many of his finest sentences saved.

There is a story of McCutcheon, the famous Chicago cartoonist. McCutcheon was waked at 3 o'clock one night by the telephone ringing.

It was the city editor of the paper for which he worked. "Mac," shouted that wide awake individual, "Missouri has gone Republican, and we must have a cartoon."

McCutcheon pulled out of his warm bed, and set to work. Then, when he had sent the sketch off with the messenger, he went back to bed feeling that he had done his best, but that it wasn't much good. The cartoon was "The Mysterious Stranger," which made McCutcheon famous among cartoonists.

Napoleon was wont to talk of 2 o'clock in the morning courage. That was his requirement for a soldier. Two o'clock in the morning enthusiasm is getting to be the requirement of the successful business man. Yes, the hardware business is exacting. The dealer must be continually on the alert. He must be ever ready to secure new goods which will draw people to his store. He must be watchful for new methods of presenting the old goods, so that the people will feel their need. He must nail down an idea when it comes. If he waits until to-morrow the idea may be gone. He has to work hard to get results, but the results, and the work itself, are worth it.

CARELESS METHODS OF PARTNERS.

Confidence in one's fellow workers where money is concerned, may in a great many cases be warranted, but it is not always good business.

In the retail trade there are so many partnerships being run in a loose fashion that the question commands serious reflection. There is much room for improvement in methods where partnerships exist. Cases, for instance, where the partners of a business take whatever they want from the store to supply their families without making any record of the transaction, are frequent. They never charge themselves up with anything, and it is safe to say they don't use exactly the same value of goods in a year. One, therefore, has an advantage over the other.

The business man of to-day, even if he is the only proprietor of the store, charges himself with the goods he uses at regular selling prices, and allows himself a set salary.

There is greater reason why partners should follow this example. By all means, when a partnership has been formed a set salary should be assigned each member. Otherwise there is almost sure to be trouble later on when one becomes suspicious that the other is getting more than his share. This method of dipping into the cash register for money from time to time does not belong to the present. It is antiquated and should be relegated to the proverbial ash heap. A definite salary based on qualifications removes doubt, as does also the charging of everything taken for the table. At the end of the year the money is returned in increased sales and profits and sound, practical methods have prevailed.

POINTED EDITORIALS.

Who said eight cent white lead?

* * *

There is not much use swatting the fly unless it is done in a scientific way.

* * *

Four swats. Four flies. A million flies exterminated in the fourth generation.

* * *

A dealer's leading weapon in the fight against the parcels post evil is "immediate service."

* * *

It is cheering to note that while prices of hardware are advancing the quality is advancing much more rapidly.

* * *

Wher ethe pig advances the white lead must follow. Those who wish to be thoroughly informed on the paint market must follow the metal market too.

* * *

At the inquest of a man who had been blown up in Montreal, was shown a coat sleeve, that being the largest part remaining. This man would seem to have solved the distribution problem.

* * *

Watch the fruit crops. Strawberries, it is said are going to finish early. Now is the appointed time for preserving these, and consequently the appointed time for selling the kettles and boilers required for preserving.

Results of Advertising

IT is doubtful if there is any phase of merchandising about which exists such a diversity of opinion as advertising. The time has well nigh passed when dealers declare that this is no good. There are, of course, still a few who maintain this; but then there are still dealers who tightly shutter their stores at night, instead of permitting the illumined interior to give its greater protection. The great majority of merchants, however, believe in advertising—their only fault being that they expect too much. They not only want immediate results, but they want the advertisement to bring immediate proof that it is bringing results. They want people to write: "Seeing your ad. relating to ———— I have become interested, and would like you to forward one of the articles. Please find enclosed check."

That would be results, the dealers are inclined to think. Indeed it would, and such results are often secured. But the advertiser must remember that the great number of people who read his ad. are not in the least interested in him. They are not interested in the advertisement either, but through the advertisement in the thing advertised. Not many in writing will mention the ad. Not many, in coming to a store for an article, will mention that they saw something about it in the paper.

"But," it may be said by some dealers, "we know whether we are selling more of the goods advertised, and if we are not we can tell that this particular advertisement is of no use."

It sounds reasonable—but it isn't. Even in this age men are slow to act, and so are women. They read of an article and are interested. They almost make up their minds to buy, but something interferes. Still the memory of that article remains. The want—which the ad. made known—remains a want, and months after the sale will come. Other goods will be explained in the dealer's advertising space, but the sales will be due to the advertising done weeks before.

Perhaps the advertising manager of a large hardware firm in Eastern Canada made the best test of advertising which is possible. The "powers that were" wanted the advertising stopped, claiming lack of results. They put the onus of showing why the campaign should be continued upon the advertising manager. This man did not attempt to discover an order which had come as a direct result of any one ad. Instead he took a certain lengthy period, showed what had been advertised during this period, and showed the increased business which there had been in this line. He also showed the increased business in unadvertised lines. The sales of goods brought prominently before the public had increased 80 per cent. Those unadvertised had increased only 10 per cent.

Then were taken two concrete cases. The firm had sold in one season 404 of a certain make of revolvers. At the beginning of the next season these goods were advertised, and while there did not seem to be any result the returns at the end of the season showed that the sales had numbered 1078. The next year—the ad. still appearing from time to time—over 1,500 were sold.

A certain plane had brought 700 sales. It was advertised. The sales totaled for the corresponding period, not 700, but 1,600, and results are still being felt.

This firm decided to continue advertising. Any firm which studied the question in a like manner, and did not demand instant returns, would reach the same decision.

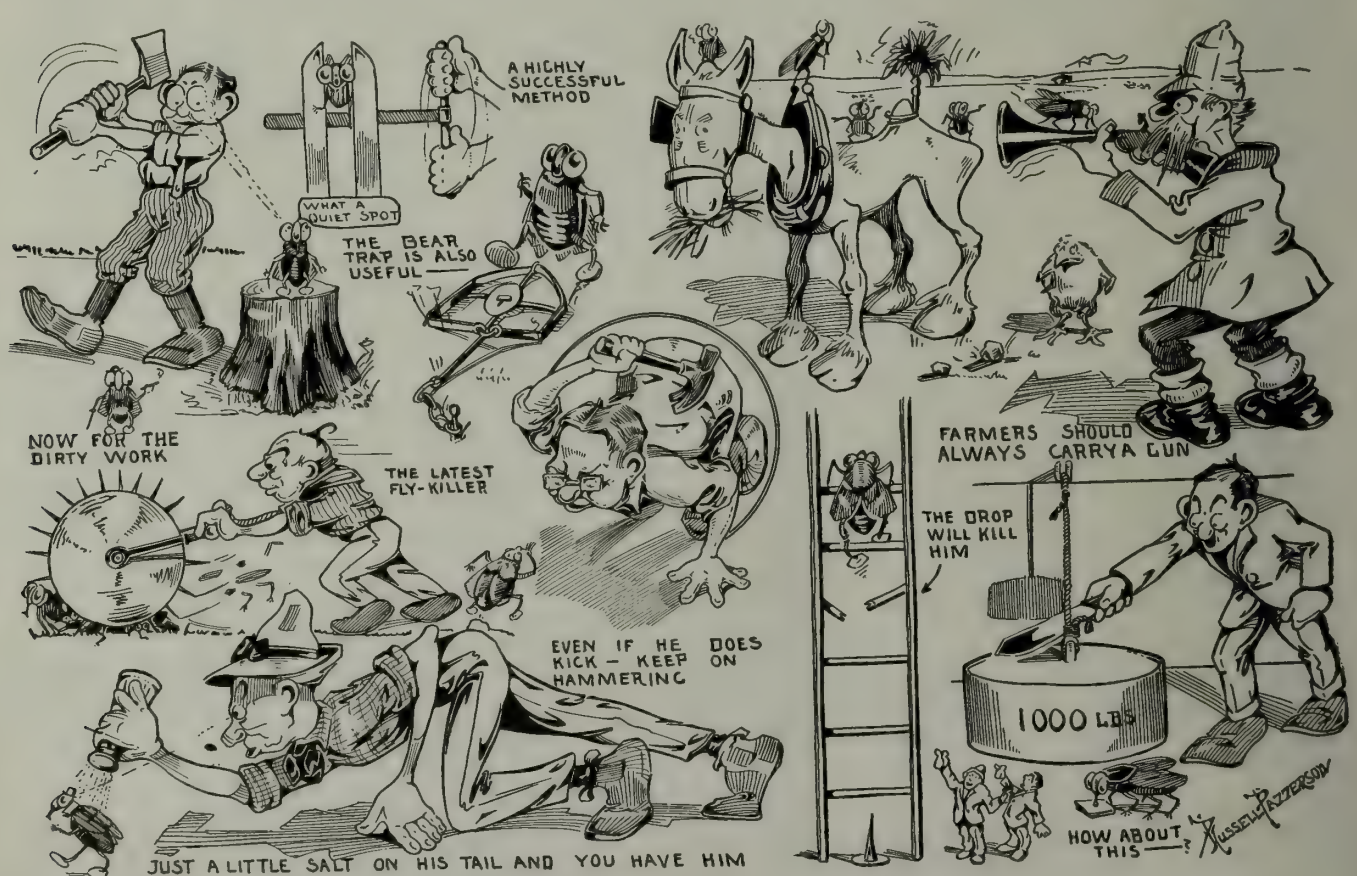
The Fly Peril and the Hardwareman

"Swat the Fly" is Now a Common Slogan—Old and Young Have United to Swat This Microbe Messenger Out of Existence—The Equipment Needed for the Warfare is Carried by the Hardware Dealer and Should be Featured Now.

The Fly Peril has come to be recognized as the real predatory, persistent, pesky peril of the age.

It is a new peril at that—just off the press, as it were. Up to a short time ago, the fly was regarded in a lenient light by mankind. He was a nuisance, it was acknowledged—especially to baldheaded men, and horses—but he was harmless, quite. "As harmless as the fly," was a trite saying. Then medical men started to investigate the secrets of disease dissemination and, lo, the fly stood revealed as the villain of the piece. Posing as a harmless member of the insect family whose main object in life seemed to be to supply the spiders with food, the fiy had been secretly and insidiously collecting germs from garbage pails and other favorite haunts and conveying them poste haste to the kitchen, the dining room and the baby's cradle.

Medical men at once began to take an interest in the fly. They collected statistics to show that such time as the fly was not using in placing germs where they would do the most damage, was devoted to raising an army of other flies to carry on the work. Consider these figures. A female fly lays 150 eggs in 10 days. That means, say, 75 more lady flies, each with the power of laying 150 eggs in the same space of time. Figure it out and you find that in 40 days the number has increased from one to 64,136,401. The possibilities of fly multiplication are stupendous and staggering.



This information led to the "Swat the Fly" campaign. In an effort to avert the evil day when the earth would be creeping and the air black with flies, man started in to swat. To swat the fly was recognized as a public duty. The motto of the crusade was the doggerel of the cartoonist McCutcheon, who seems to have been the power behind the movement:

"If you'd rather live than die,
Roll up your sleeves and swat the Fly."

There was an immediate sound of swatting in the land. Men acquired an uncanny agility at the grim work. The fat man, who had not seen his watch chain this many a long day, became quite agile in his pursuit of elusive microbe messengers. "There," he would say, breathless, but triumphant, as he flattened a frisky fly on the eavetrough. "The number of flies forty days hence will be 64,136,401 less than as if I had let that buzzing pest get away from me." It was an encouraging thought. With every leg placed on the tanglefoot, every fell swoop of the fly killer, the futures of 64,136,401 possible flies were cut off. A grand work, surely.

A Real Nuisance.

It is not an imaginary, theoretical peril either. It is a real, live, every-day one. The fly has two favorite haunts. One is the place where he can gather the most germs. The other is the place where those germs can do the most harm. Naturally the fly is just the greatest little disease carrier ever created. He buzzes jovially around the garbage pail until his legs are coated with enough microbes to infect any number of susceptible mortals and then

Men are finding ingenious methods of exterminating the fly—Some suggestions by Hardware and Metal's artist.

alights on the tip of the baby's nose or skims across his lips. He visits the sugar bowl, the cream jug and the dish prepared for the table. He is the more deadly because he appears so innocent.

The movement has its humorous and also its serious side. Men may speak jokingly of the subject but they swat in real earnest. Merchants, and in some cases, municipalities are offering prizes to the persons who kill the most flies. Some remarkable records have been hung up. The swatters belt belongs so far to the energetic man who swatted no fewer than 515 flies in one day, thus disposing of the possibility of a few trillion extra flies being added to the next year's supply.

The Equipment Needed.

All this is of great importance to the hardware dealer. Quite an equipment is needed in this crusade against the fly. Articles of defense and weapons of offense are required. The hardware store is the place where the equipment can be obtained.

While all people have not enrolled themselves as active swatters, every household takes measures to keep the fly at a distance. The screen door and window netting have been devised for this purpose.

For the offensive campaign many articles are handled—or should be handled—in the hardware store. Tanglefoot is the most common form of trap to lure the unwary fly to his death. The balloon fly trap is another much used devise. Since swatting became a popular pastime, wire-handled fly killers have been much sought for. In the hands of an energetic adult or an active child with a taste for the chase, these little flat instruments can wreak dire havoc in the fly ranks. Pastes are also being used.

All these articles are handled largely, though not exclusively, by the hardware trade and it behooves the dealer to feature them prominently at this juncture.

Although the height of the summer season has been reached, the fly peril has not yet become acute. The fly needs scorching hot weather to perform at his best and the warm spells so far have been few and of short duration. However, every fly, like every dog, will have its day and fly days are not far off. There will soon be an active demand for the articles named above and others of a similar nature.

It would be advisable for hardware dealers to give prominence at once to these lines. One of the most effective methods is to have a window display—one which people will not fail to see, just such a one as the writer saw the other day in a hardware store window. The centre of attraction in this case was the figure of a man with a fly killer in one hand. The figure worked automatically through an attachment with a small motor placed above. The arm rose and fell and the killer "swatted" a figure about one foot long, made in the semblance of a fly. A big banner was spread across the top, with the words, "Swat the Fly—Get your equipment here." The background contained an assortment of screen doors and windows and all the weapons of offense. It created a lot of talk and the dealer disposed of a large stock.

The campaign should start at home. The doctor who is ailing does not inspire confidence in patients; a dentist with bad teeth is an anomaly and almost certainly an unsuccessful practitioner; a bald-headed man could not sell hair restorer. People expect a man who is selling an article to at least show sufficient faith in it to use it himself. The hardwareman is not likely to dispose of very much of his stock of fly-swatting weapons, unless he keeps his own store pretty clear of the pests. A pad of tanglefoot covered with flies is the best advertisement for the sale of a supply of the same.

Start a "swat the fly" campaign in your store, Mr. Dealer. Keep them out as far as possible, but when they do get in hunt them down relentlessly. Their presence in the store is not only a bad advertisement for the stock but a menace to the rest of the goods.

FORTY BUSHELS.

A three-weeks' "Swat the Fly" campaign was conducted in Worcester, Mass., last year. During that period 16,267,088 *flies were killed—forty bushels of them in all.*

Prof. Hodge, who conducted the campaign in Worcester, sends the following message to the people of Ottawa, as a suggestion for the campaign beginning there this week:

"If the people of Ottawa will arise to the situation and adopt my method of killing the flies at the garbage pail, in two weeks there will be but few left, and during the summer if precautions are carefully followed by ALL housekeepers the city should be practically free from the germ-spreading fly pest."

A CONTEST IN OTTAWA.

Ottawa, Ontario, July 2.—"Banish the fly!" is now the slogan in Ottawa. Yesterday the prize fly-killing competition organized by the Public Health committee of the Local Council of Women was inaugurated. Such a contest conveys a new and vital form of educating the people to a danger long overlooked or neglected. Parents should encourage their children to enter the competition, for aside from the financial gain accruing to the youngsters, the benefit to the community from the standpoint of good health is one of almost incalculable extent.

Fly-killing campaigns have been conducted in several American cities with results beyond all expectations. In Hamilton the Spectator has offered several valuable prizes, and the boys and girls of the Ambitious City are ridding it of the undesirable pest so fast that flies will be practically unknown there when the contest ends. If the public will only grasp the importance of such a campaign in Ottawa the next two weeks will open the eyes of many people to what can be done through a little organized effort. It may save many a baby's life this summer.

The flies, after being caught and killed, must be taken to the board of health office, in the city hall, where Dr. Shirreff's assistants will give them a receipt for the number turned in. These receipts must be kept until the close of the contest.

The contest is open to all boys and girls who live in the city limits. There are no formalities to be observed in entering the contest. Just start in and catch flies and then take them in a can or bottle to the board of health office in the city hall and get your receipt.

Traps, pads, swatters, poison or any other device for catching them may be used. Everything except sticky flypaper, and that is barred only for the reason that it is impossible to get the flies off it. The contest closes July 15.

The rewards offered by the Local Council of Women are:

First prize	$10
Second prize	5
Three prizes, each	2
Four prizes, each	1

COMPANY INCORPORATED.

The E. T. Wright Co., Limited, have been incorporated to take over the existing business of the firm of E. T. Wright & Co., Hamilton. The capital stock of the company is $600,000.

Have Store in Keeping With Windows

An Important Point in Connection With Successful Window Trimming—The Advantages that the Dealer in a Small Town Has—Balance and Color Are Salient Essentials.

By F. E. Richardson, Harrow, Ont.

The complaint is often heard that the merchant in a small place does not have the opportunity to conduct his business along progressive lines. Only a small percentage of dealers in the towns and villages pay attention to window dressing. They seem to think that, as they have a small public to appeal to, they are not going to get results in keeping with the effort required; in short, that it is not "worth while."

This impression is quite erroneous. The merchant in the small town will get just as good returns from a creditable window trim as the man in a big city store. His public is smaller but he is more sure of their attention. In the cities, people are in a great hurry and they give scant attention to store windows, unless the displays are of exceptional merit. People stream past the store at all hours of the day but how many give more than a passing glance and how many stop? The percentage is small. On the other hand, the people in a small town have little to engage their attention. When they go down town the shop windows are the main attraction and it is safe to say that a display of exceptional merit will be looked over by every person in town who can be termed a buyer in any sense of the word. It will be talked about also. We, in the small places, may not get as large number of people to look at what we evolve but we get more of their attention and time. We get quality, if not quantity.

It pays the small town merchant, therefore, to give full attention to his store windows and see that he has something interesting for the public right along. It will pay him in the most tangible way imaginable, in dollars and cents.

Carry it Through.

In discussing the practical sides of window dressing, one consideration looms up large to my mind. How often we find stores which resemble the Mexican, who puts every cent he can scrape up into the purchase of a handsome, lace-frilled hat and is content with rags for the rest of his costume. These stores have well appointed fronts and attractive window displays but the interior of the store is untidy and uninviting to the last degree. All effort and ambition apparently is expended in the preparation of the window displays and the store itself is allowed to go. People get a distinct shock when, attracted into a store by the window display, they find the interior in poor condition and the goods unattractive. They are disappointed and perhaps are inclined to feel that they have been tricked or lured into the store under false pretenses. If they have come in to look at some particular article which they had seen in the window, it will not look nearly as good with such unfavorable surroundings. The condition of the store will prove a severe handicap on salesmanship.

The need for keeping the interior of the store just as attractive as the window displays, is accentuated where the window has no background. If people can see through the window into the store, they are not likely to enter, if the appearance of the interior does not look inviting. In this respect the open window is an advantage. It keeps the staff "on their mettle." They are not so prone to let things slide and to feel that the store is looking its best if the windows are attractively trimmed.

In our store at Harrow we prefer to have the windows not cased in. In preparing window displays, we use an openwork background to enable passers-by to look beyond into the store. We aim to make the window a medium to attract customers and invite them inside and to not have them disappointed after entering.

The Value of Color.

In preparing displays, two points stand out prominently to my mind. Have the display evenly balanced, with a central figure or point. Lack of balance takes away from the appearance of the display and makes it look as though the goods had been thrown in carelessly. In order to preserve balance, it is essential that the space should not be crowded. Putting in too many articles is a serious mistake from every standpoint.

A second essential is the color scheme. A good window display is one which is different from the rest and, in order to effect this, it is necessary to devise something to catch the eye. A good color combination is most effective.

The accompanying illustration is of a display we arranged last December. We made a special study of the color arrangements for this window. The front and side border on the bottom of the window was made of crepe paper with a green background with Christmas

AN OPEN DISPLAY.

This window was trimmed by F. E. Richardson, of Harrow, Ont. The back of the window was left open, and the same scheme of decoration was carried out through the store, thus adding to the attraction of the display. The picture does not do justice to the window arrangement, which was unique, particularly in its color scheme.

bells of a rich red on it. The white back was made of cheese cloth puffed up. At the back of the window two steps were placed, the uprights being covered witth the some cheese cloth. Two centre columns were placed on the top step and two more were placed on the ground floor. Streamers in red and green were suspended on the columns. The columns were decorated with red and green maple leaves and holly, with cutlery at intervals. A centre post at the back of the window was painted with aluminum and streamers of red and green crepe paper were wound around it. On the top of the two outside columns, we put uprights about an inch square, wrapped in red crepe paper. Three bicycle rims were attached, each being wrapped in red, green and white crepe paper, in narrow strips. Inside the rims, we displayed pocket cutlery, scissors and in the centre of each was suspended a bright red glass bell about six inches in diameter. On the top of each of the centre columns we showed a shaving mirror set and resting on the points of a star in the centre, covered with light green crepe with a narrow strip of red on the edge.

These details will give an idea of the color scheme of the display but the photograph does not give any adequate idea of the effect.

Interior Decorations.

We did not stop with the window display in this instance, but carried out the same plan of decoration throughout the interior. Our most attractive and salable lines were brought to the front and vines of imitation smilax (green) were run throughout.

Price Cards.

In regard to the using of price cards, we have been rather undecided, as a great deal can be said both in favor and against this on certain lines. However, we think it best to use them on most occasions, especially when there is a special sale of goods.

Price Problems---3. Position of Paint

When mixed paint is arraigned before the bar of inquiry two things at once become evident. One is that paint is dearer now than it was—say twenty years ago. The other, that the quality of the paint is much superior to that sold in the early 90's. A purchaser of paint now invests more, but he gets more for his money.

But leaving the question of quality aside for the time, it must be stated that the advance in the price of mixed paint has not been as great as the advance in many other lines. The advance, as compared even with that upon the ingredients from which paint is made, has been small.

It will be necessary to quote a few figures to show this. But despite the rule, these figures will hardly be dry, since many of them refer to oil.

Change in Raw Materials.

Twenty years ago mixed paint was being sold at $1 a gallon. Think of it—a dollar a gallon, while now dealers are forced to ask prices ranging from $1.60 to $2. But wait a minute. Every dealer knows that there is a large amount of linseed oil in mixed paint of the better quality. Oil, twenty years ago, could be secured for 35 cents a gallon. To-day it is quoted at $1 and $1.03—even higher in Toronto. White lead is also largely used in the manufacture of paint. To-day, owing to recent advances which have not yet brought a corresponding advance in the price of paint, this sells at $7.40 a cwt. in Montreal. Twenty years ago it was sold for $3.50.

In other words, in the past twenty years, the price of oil has been tripled. White lead has more than doubled, while mixed paint has hardly doubled in value. And this is leaving out of consideration the greater rents which have to be paid now, the greater cost of labor, and the greater transportation costs. It is also letting the question of quality slip. There are barn paints, and priming paints, which can be secured now at 90c and $1.30, which are fully equal in quality to the best mixed paints sold twenty years ago.

Ten years ago, or, to be more correct, in 1901, paint was selling at a higher rate. Then linseed was at 72c and 75c, while white lead was being sold at $6. Considerable advances in these raw products, it will be seen, which were met by an advance in the cost of mixed paint to $1.25 and $1.45.

Many Small Advances.

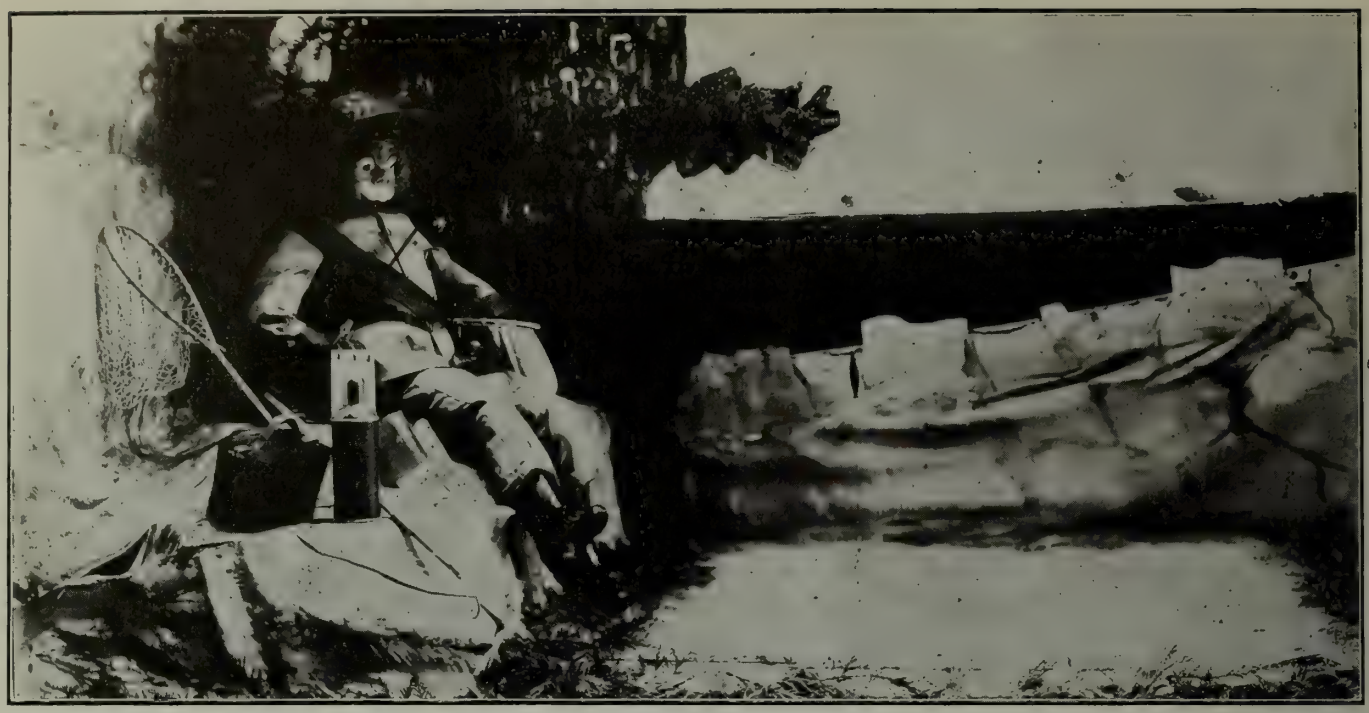
In 1908 the prices were higher, $1.60 being asked for the paint; and since then there have been a series of small rises—following the fluctuations of the raw materials—which have put the price up to the present level.

But price is not the most interesting feature. Quality is the thing. Efficiency. It is a good thing to forget once in a while the high cost of living, and think a little of the high value given. In paint, perhaps as much as in anything else, has there been an increase in the value given to buyers. Twenty years ago the mixed paint business was in its infancy. It is a strong young man now, the strides made having been tremendous. Twenty years ago mixed paint was reviled by painters—and with some reason. But in the twenty years experiment on experiment has been made. Carefully trained men have been studying the question, and now many painters have admitted that the scientific makers of mixed paint can turn out a better article than they can produce by the use of lead and oil. There is a fence in Montreal which proves this. It makes the back line of three men's property. All painted their part six years ago, the two outside owners having the work done with paint mixed by the painter, the middle man having his done with a well-known brand of mixed paint. His fence stands out white and clean to-day. The others are washed almost bare by the rain.

Why Mixed Paint is Best.

The improvement in mixed paints, as has been indicated, is the result of careful study. The mixed paint of to-day gives much greater protection against wind and weather than did the paint of two decades or of one decade ago. Considering paint as an insurance for buildings, it gives a longer term policy now than it did in its earlier years.

This question of paint as an insurance is worthy of a little attention here.



The higher the value of a property the more it will take to insure it. All will agree with this as a general principle. It will, therefore, be agreed that a building having $148 worth of lumber in it would cost more to insure than would one in which the lumber cost only $42. Notice how this works out.

A Problem Which Illustrates.

Lumber has risen in price tremendously these last few years. Twenty years ago pine could be secured at $10 or $12 a thousand. Now pine is practically not to be obtained. Spruce, formerly frowned upon, is now considered fine lumber for building. Even hemlock is much used. Nor is the deterioration in the grade of lumber the only thing to be noted. Much more is now paid for the inferior stuff than was paid for fine pine in the old days. A man is doing pretty well now if he gets his building lumber for $35 a thousand.

Supposing, therefore, a house 40 x 30 had been erected 20 years ago. In it

UNIQUE DISPLAY.

This trim appeared in the window of the Lawrence Hardware Co., Revelstoke, B. C. It was original and striking and attracted considerable attention.

Found Sporting Goods Very Profitable

The Experience of Two West Toronto Firms—Stocked These Lines This Year for First Time and Have Had Splendid Results—The Importance of Proper Display—A realistic Display by the Lawrence Hardware Co., Revelstoke, B.C.

The present season is an active one for the sale of sporting goods. The range of articles included under the head of sporting goods is a wide one—Everything pertaining to camp life can be counted in this department in addition to athletic and sport supplies.

The first of July starts off the real camping season. There is absolute confidence in the public mind that, after Dominion Day the weather will be steadily and consistently warm and, as warm weather is essential to camp life, the exodus to the woods starts after the holiday. Tents, camp kettles and stores, camping supplies of all kinds are now very much in demand. The primitive instinct which seizes on most men, urging them to tear themselves away from the restraining influences of modern life and spend a couple of weeks in the woods, is predominant. "Back to nature" is the popular slogan.

There is, perhaps, no department of the hardware store which should receive more attention at the present time. The variety of articles which come under the head of sporting goods is so large and the demand so big that the dealer who can get the trade "coming his way" will find it very profitable.

Are Well Satisfied

Does it pay the hardware dealer to handle sporting goods? Some dealers have not been inclined to think so. There are here and there still a few firms which have stuck to the straight and narrow path of shelf hardware, without deviating or altering their course. The number is small but the fact that there are still some who take this view makes the question quoted above a pertinent one.

The best answer probably is to quote the experience of certain retail hardware firms which enjoy a reputation for progressiveness. A representative of Hardware and Metal called on a number of dealers in West Toronto recently and among others visited the store of Christie Bros. The talk drifted around to the question of sporting goods and R. G. Christie, a member of the firm, stated that they had made their initial venture in that department this spring.

"We put in a stock of sporting goods for the first time," said Mr. Christie. "In order to give the line a fair test, we decided to feature the goods prominently. We took the front counter in the store and used it for sporting supplies The stock was very noticeable there and customers could not help but become aware that we were handling these lines. We also featured the goods in window displays.

"The results have been very satisfactory. We have had heavy sales and certainly intend to continue in this branch of the business. Our trade has been heavy, much heavier than might be expected with a line so entirely new to us. This can be attributed partly to the fact that we have given the stock every prominence and partly, we believe, to the popularity of the goods."

The experience of May Bros., another West Toronto firm, has been very similar. They started in sporting goods for the first time this spring and have had splendid results.

Must be Featured.

The moral of it is that, while sporting goods are a splendid line to handle, it is necessary to handle them well. The goods should be featured just as prominently as the dealer's facilities permit. There is a great deal in the power of suggestion. This is particularly the case with regard to the sport enthusiast. If fishing is his particular hobby, the enthusiast will stop to scrutinize every article he sees in the store or window

which has to do with the "gentle sport." It may not have occurred to him that he needed a new rod or landing net but if he sees one or the other which appeals to him particularly, he will be "keen set" to buy. A good salesman can do the rest.

A Clever Display.

It is impossible to lay too much stress on the importance of good window displays. A clever arrangement of goods will bring every sport lover in the locality to the store. It will prove, literally speaking, a trade magnet which none will be able to resist.

The accompanying illustration shows a display which appeared in the store of the Lawrence Hardware Co. at Revelstoke, B.C. It was decidedly unique and the details had been carried out with such careful attention that the window looked realistic. It had, of course, a particular appeal for the angler.

The floor of the window was painted and covered with sand and phantom minnows, frogs and insects. Stones were then built up around the sides and a sheet of glass placed over to represent water. The sides were built up above the glass in a clever representation of banks. The effect of a pool of water was given so faithfully that at first glance few could tell that it was not actually a liquid pool.

A tree was placed in the rear, with the branches hanging over, making the typical "shady nook" which is always sought out by the angler. Painted canvas represented the rocks in the rear. The figure of the fisherman was fitted out with everything that a sportsman needs, even to the flask which, so rumor has it, is quite indispensable on a day's outing.

This display had a stimulating effect on trade in sporting goods and every dealer can take it for granted that, with a similar effort, the results will be satisfactory.

LETTER BOX.

Chandeliers.

Wells & Wells, Dresden, Ont.—"Kindly advise us who makes chandeliers for holding three or four lamps for lighting public buildings."

Jas. Morrison Brass Mfg. Co., Adelaide Street West, Toronto.

HAVE OPENED BRANCH.

The Onward Manufacturing Co., Berlin, have opened a wholesale and retail branch at 423A Yonge street, Toronto. It will be under the management of Geo. A. Cox.

THE SUDDEN DEATH OF THOS. G. DEXTER.

(Concluded from page 33.)

Funeral on Friday.

The funeral will take place on Friday at 2.30 p.m., from the family residence, 125 Huntley Street, Toronto, to Mount Pleasant Cemetery.

As a mark of respect, the offices and warehouse will be closed all of Friday afternoon.

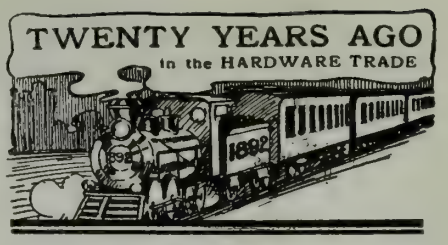
Tributes to Memory.

Tributes to the high qualities of the deecased are heard on every hand. His integrity and his pronounced ability and judgment were marked attributes, and it is stated by all that one of the ablest of Canadian hardwaremen has been lost.

He was a hard and consistent worker and possessed a rare degree of executive ability. His views were sound and broad.

PRICE PROBLEMS—3. POSITION OF PAINT.

Concluded from page 39.



there would have been 4,200 feet, which would have cost about $42. The cost of painting that with paint at $1 a gallon (which covered about 250 square feet) would have been $17.

Increased Premium Not Proportionate.

The same house built to-day would have in it the same amount of lumber, but this lumber would cost about $148. Painting it with mixed house paint at $2 (paint which will easily cover 350 square feet with two coats), 12 gallons would be needed in place of seventeen with the poorer covering old paint. The cost of the work, therefore, would be $24, as against $17 in the old days.

In other words, the insurance against wind and weather on an investment of $42 cost $17 in the old days; whereas the same style of insurance on an investment of $148 costs only $24 to-day. The increased premium would not be commensurate even were the length of insurance forgotten. But this must not be left out of the question, for the paint of to-day resists the elements many years longer than it did in the early days of this product. It gives a longer term protection policy.

Undoubtedly paint has risen in price. It may rise still further. But it has not risen anything like proportionately to the products it is meant to protect, and its efficiency has increased greatly, while the efficiency of many of the materials upon which it is used, has decreased.

The following items are taken from the issue of July 9, 1892:

"The Association of Barb Wire Manufacturers met this week. The following were present: Mr. Fairman, representing the Dominion Wire Co., Montreal; Mr. Ives, representing the Canada Wire Co., Montreal; Mr. Somerville, representing the Ontario Lead and Barb Wire Co., Toronto; Mr. McMichael, representing James Robertson & Co., Toronto; Mr. Howard, representing the Safety Barb Wire Co., Mimico."

Editor's Note.—Time has wrought many changes in the firms represented in this association. The Dominion Wire Co. is now a part of the Steel Co. of Canada. The Ontario Lead and Barb Wire Co. became Somerville, Limited, and is now United Brass and Lead, Limited.

* * *

"The cutlery trade has been in a depressed condition for a considerable time. In January of last year the pen and pocket cutlers and forgers at two or three of the leading establishments in Sheffield were asked to accept a 5 per cent. reduction. Meetings of the unions connected with the pen-blade department were promptly held to consider what steps should be taken."

Editor's Note.—The cutlery industry to-day is being affected by labor troubles. Skilled mechanics are hard to get and, as a result of this condition, the men are demanding higher wages. The dissension has to some extent curtailed production.

* * *

In the list of bankrupts appear a number of well-known hardwaremen and plumbers.

Editor's Note.—Although times do not appear to have been particularly good twenty years ago, there seems to have been plenty of recuperative power. Practically all of the men whose names appear on this list afterwards re-engaged in business, were successful in re-establishing themselves on a good basis and ultimately became highly prosperous. One man, a Toronto plumber, became one of the best known men in the trade in Canada.

Complete Course of Sheet Metal Work

By L. W. KOSER

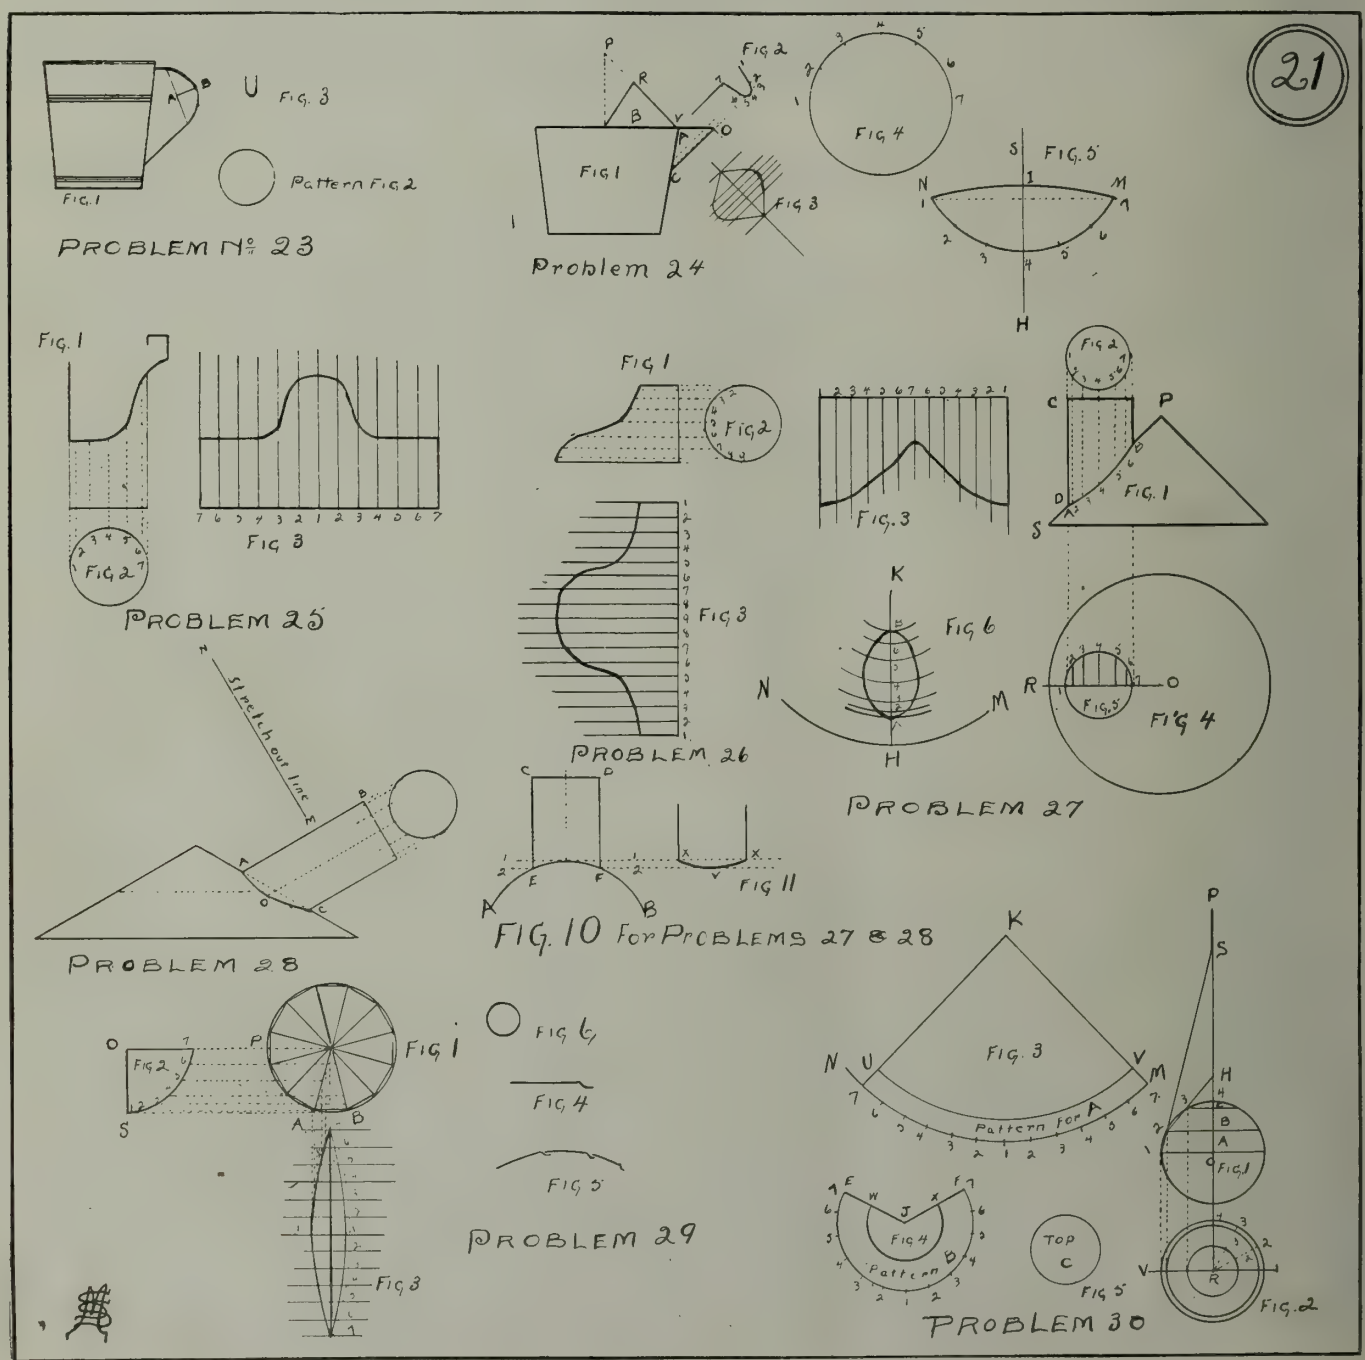
In prob. 23, plate 21, fig. 1 represents a pail, of which A-B is a boss, or reinforcement on the handle.

The pattern is simply a circle having the same curve as the handle, and is cut out to shape shown by fig. 2, then formed to shape by fig. 3, and soldered to handle.

In prob. 24, fig. 1, is a strainer pail, the brest B is developed the same as the brest on the watering pail, prob. 18, plate 20.

To develop the spout A, continue the line C-O any distance, and parallel to this carry a line from the point V, as V-7.

Draw a cross section of the spout fig. 2, then divide it into equal spaces and carry lines from same until they cut the lines O-V and C-V.



Lay out a stretchout at right angles to C-O, as fig. 3, and carry lines from the different points on the mitre lines O-V and C-V.

Figures 4 and 5 show the brest B developed, if it is not particular to have the pattern the same as the elevation, then cut it off on a straight line from N to M, as shown by the dotted line.

Prob. 25 shows method of developing the outlet for joining a conductor pipe to an ogee trough.

The principle of developing this pattern is the same as developing any of the patterns shown on plate 14.

The profile of the trough, fig. 1, is first drawn, then the plan of the pipe, fig. 2, is drawn directly below it, measured off into equal spaces and lines projected into the profile above it.

Then lay off a stretchout at right angles as shown by fig. 3, and so on.

Prob. 26, fig. 1, represents the body of a scoop, fig. 2, the plan, and fig. 3, the pattern. We will not explain this further than shown by the drawings, but will leave the student to develop this.

Problems 27 and 28 represent pipes meeting a cone-shaped article at different angles (as, for instance, the pipes at the top of a furnace).

The only difference between these problems and the butt mitres shown on plate 14, is in the mitre line.

As will be readily seen, the sides of the pipe set lower than the top and bottom owing to the curvature of the surface they join.

The only thing necessary to know is the depth of the mitre line in the centre. The mitre line can then be drawn free hand.

To get this depth we take the curve of the cone where the centre of the pipe joins and see how far the sides of the pipe must set in to meet the curved surface.

In fig. 10 we illustrate how this is done.

The curved line A-B represents the curve of the cone. The line C-D-E-F represents the pipe butting into it. The line 1-1 shows where the centre of the pipe joins, and the line 2-2 shows how far the sides must set in to meet the curve. Fig. 11 shows how the mitre line would be for a small pipe joining a large one, while in problems 27 and 28 the mitre line is pitched.

Now, taking problem 27, we first draw the elevation, fig. 1, showing the pipe meeting the cone. Then the plan, fig. 2, and divide it off into equal spaces.

We then draw the mitre line A-B, having first found out how deep it is in the centre. Then drop lines from the plan, fig. 2, to the mitre line A-B, and across onto a stretchout of fig. 2, thus developing the pattern as shown by fig. 3.

To get the opening in the pipe the easiest way for a problem of this kind, where the surface is large, is to take the end of the pipe after the mitre is cut, place it against the surface of the cone, mark where it butts and cut out the opening, allowing a flange to turn up inside of the pipe for riveting if necessary.

To develop this pattern in the flat, however, we first draw a circle or part of a circle the size of the bottom of the pipe, see fig. 4, having the centre O directly below the centre P of fig. 1.

Then draw a horizontal line as O-R out to the edge of the circle.

Next draw the circle, fig. 5, which is the same as fig. 2, and is directly below fig. 2. Divide this off into the same number of spaces as fig. 2, and drop lines to the centre line O-R.

Now set the point of the compass at P, fig. 1, and the lead at S, and at any convenient place as K describe the arc N.M.

Draw the vertical line K-H, which represents the centre line S-P of fig. 1, directly over the centre line O-R, of fig. 4.

Now set the point of the compass at P, fig. 1, and the lead at B, and with K as centre describe an arc cutting the line K-H at B.

Then set the point at P, fig. 1, and the lead at 6, on the mitre line, and with K as centre describe the arc 6. Continue thus until all the points on the line P-S of fig. 1 have been transferred to the line K-H of fig. 6.

This gives us the length of the opening. What we want to get now is the width at the different points.

Set one point of the dividers at point 4, fig. 5, and the other on the centre line, O-R, directly below it. Then lay this distance off on either side of the line, K-H, on the arc, No. 4, which gives the width of the opening in the side of the line, K-H, on the arc No. 4, which gives the width of the opening in the centre. In a like manner, get the width of the opening at each one of the other points. Then trace a line through these points and cut out opening.

Prob. 28 is of the same nature as prob. 27, and the student is required to develop this along the line of prob. 27. In this case we would recommend that he get the opening in the cone by butting the end of the pipe against the cone and marking around same.

APPOINTED AS AGENT.

Spear & Jackson, Limited, Sheffield, England, have appointed Frank S. Scott, 1133 Coristine Building, Montreal, as their agent for the Dominion.

—⚙—

Land the Contract.

Saskatoon, Sask.—Thomson & Homer have been awarded the contract for the plumbing and heating of the new seven-storey Ross block to be erected on Third avenue.

Hugh A. Gunn Leaving Hardware Trade

Has Resigned from H. S. Howland, Sons & Co., Toronto, to Associate Himself With John Stark & Co. — He Began in the Hardware Business at London, and His Rise Has Been Most Rapid.

The resignation was announced this week of Hugh A. Gunn, who has been with H. S. Howland, Sons & Co., Toronto, for the past 18 years. It was tendered some time ago, and will go into effect at the end of the month, when he will become associated with John Stark & Co., stock brokers, financial and real estate agents of Toronto.

Mr. Gunn is still a young man, being in his thirty-eighth year, but he has won a wide measure of success. His climb upward has been rapid. At the age of 24 years, he was elevated to a position entailing responsibility, which seldom comes to men before they have attained middle age.

Mr. Gunn is a native of London, Ont., and there he secured his first hardware experience. As a young man, he engaged with Wheeler & McLean, hardware dealers, and he secured a first-class grounding there in the hardware business. In 1894, he came to Toronto and joined the staff of H. S. Howland, Sons & Co. He served just in the warehouse and then as city traveler. Four years later his ability was recognized by his & Co. He served first in the warehouse He has since occupied a managerial position, taking active charge of the sales department and the warehouse, and has proven himself one of the most aggressive and capable wholesale men in the country. That he will make a success of his new undertaking is assured.

Hugh A. Gunn.

Progressive Hardware Retailing

West Toronto Firm Erect an Electric Sign Inside Store Windows—Big Sale of Gas Stoves Reported—A "Special Inducement" Which Didn't Induce — A Practical Test to Show the Value of Refrigerators — A Good and Forceful Quality Talk.

ERECT ELECTRIC SIGN

West Toronto, Ont.—May Bros. have made a distinct hit with a new electric sign. It has been placed inside the store windows at the top, and the light shines through the lettering, making a very brilliant illumination. The lights are kept on every evening.

May Bros. state that the undertaking has been a rather expensive one, but that it has been the best publicity effort they have ever made, and has certainly paid them. The sign has advertised the store and brought in a great deal of business.

Editor's Note.—Illumination is a valuable asset. Once merchants closely shuttered their shop windows at night. Now they keep them exposed to view and well lighted, thereby protecting their store more surely from burglars and fire, and serving the double purpose of advertising the stock effectively.

AGAINST INDUCEMENTS.

Does it pay to offer special inducements to push the sale of certain lines?

One dealer tried what might be tried, an "extra special" inducement recently, and has concluded that it does not pay. His plan was this: He had quite a stock of a certain line of goods on hand—brass kettles, if our memory serves us right—which he was anxious to reduce. Demand did not seem particularly brisk, so he decided to take steps to stimulate it. He advertised the kettles prominently at the regular price, giving illustrations. His ad. was in every sense a creditable one, and certain to attract attention. At the bottom he inserted the words:

> "All purchasers of kettles will receive 10 per cent. off the purchase price back on request."

Well, he sold seven or eight kettles within the next three days. There can be no doubt, therefore, that the advertisement had been effective. It had done its work. But the strange part of it was that **not one purchaser asked for the ten per cent. off.** Whether they had neglected to read the advertisement through, or had forgotten about that clause, or were either too diffident or indifferent to ask, is hard to say.

"I have come to the conclusion," said the dealer, "that it is not necessary to offer these inducements."

Editor's Note.—That seems to be the moral of the incident. If the dealer has a good article to offer, and if he advertises it effectively and sanely, he does not need to make "extra special" or freak inducements to bring purchasers. Every good quality article has selling power in itself. If the dealer can work that selling power, that is all that is needed.

FEATURING "NEWNESS."

Vancouver, B.C.—The Fraser Hardware Co., who make a specialty of sporting goods, are at the present time pushing the sale of tennis supplies. They are advertising the arrival of a new shipment of racquets of well-known brands.

Editor's Note.—This is a good point to make in an advertisement. People like to purchase goods which are "brand new," and the announcement of the arrival of a stock is likely to arouse their interest and direct their steps toward the store of the advertiser.

A PRACTICAL TEST.

High River, Alta.—Kelly & Young, hardware dealers, are adopting a practical test to show the value of a refrigerator. One of their best refrigerators has been placed on the floor of the store in full view of all customers. It has been filled with all kinds of foods, which are kept perfectly fresh and palatable, as all who show an interest are given an opportunity to prove to their own satisfaction. It is also shown in this way, that the consumption of ice is small.

The firm are advertising refrigerators also. They say:—

> "Let us explain to you the advantages of the "————" refrigerator above all others on the market. The ———— refrigerator is porcelain lined, and comes nearest to prefection in its hygienic system. You can place butter, milk, onions, matches, and any other objectionable articles all in the same chamber and we guarantee not to taint or in any way spoil the daintiest of delicacies. We have one on exhibition on our store floor in which we have all these foods in the same chamber, and all tempting and appetising, and kept cooler with less consumption of ice than with other makes. Buy ———— refrigerators. Ask your doctor or health officer if they are good."

Editor's Note. — A practical test of this kind would, we feel confident, be very effective. This is an original and commendable method of pushing the sale of refrigerators.

BIG SALE OF GAS STOVES.

West Toronto, Ont.—Christie Bros. report that the sale of gas stoves this year has been the largest they have ever experienced. The demand has been so heavy, in fact, that they have found it impossible to keep stocked up. A great many sales have been made, and the stoves sent direct from the car to the purchaser. In some instances, they have not been in a position to fill orders immediately. It has been in every respect a record year in gas stoves.

Editor's Note.—The same condition has arisen in other points. The sale of gas stoves throughout the country has been very largely in excess this year of any previous year. Gas stoves, once a luxury, have become a necessity.

GOOD QUALITY TALK.

Victoria, B.C.—In the heading of a well arranged full page advertisement, the Hickman-Tye Hardware Co., say:—

> HARDWARE THAT WILL ALWAYS ENDURE HARD WEAR.
>
> The lasting quality of the hardware we sell is alone sufficient reason for you to trade at a high grade hardware store.
>
> Hardware is one of the things you can always buy with a view toward its dependability, for your work—your results—depend to a very great degree upon the tools you use, the utensils you employ—"A poor tool is a poor bargain at any price. It won't do the work."

Editor's Note.—This is a good and forceful talk. Hardwaremen should seize every opportunity to talk quality.

Current News of Hardware Trade

Half Holiday Movement Spreads.

Montreal.—Several hardware stores here are now showing cards in their windows, which tell the passing public that the doors will be closed to business after 1 o'clock on Saturday afternoons during July and August. Both clerks and owners are going to take the half-holiday.

Prospects are Good.

Mr. Thomson, of the Thomson Hardware Co., Edson, Alta., was a visitor at the Toronto office of Hardware and Metal this week. Mr. Thomson reports that crop prospects in Alberta are excellent, and hardwaremen are looking forward to a heavy fall trade. At Edson a very large business is being done in supplying settlers in the Peace River District.

Death of J. Samuel.

Word was recived in Toronto on Dominion Day by cable of the death in London, England, of Jack Samuel, senior partner of the firms of M. & L. Samuel Benjamin & Co., Toronto, and Samuel Sons & Benjamin, London, Eng. No particulars have as yet reached here as to the cause of his sudden demise.

The late Mr. Samuel was one of the most able and respected members of the London Metal Exchange.

Hardware Store Robbed.

Scott, Sask.—Some time during last Thursday night, the Scott Hardware Store was broken into and robbed of two good rifles, a large amount of ammunition, and the change which had been left in the cash register. Mr. Beebe, the proprietor, places his loss at $60. The mounted police were notified early Friday morning and they now have two suspected men at Battleford.

A New Factory.

Kentville, N. S.—The Peerless Mfg. Co. is the name of a newly incorporated company doing business in Boston, Mass., and also with office and factory at Kentville. The officers are C. F. Christian, pres.; A. L. Pelton, vice-president; E. Christian, secretary; and Arch. Foster, Treas. Two of the above are well known in Kentville. The firm proposes manufacturing here Wonderful solder, Royal brass polish, best hand soap, Bright Eye cleanser oils, automobile soaps, etc., and also dealers' repairs, etc., in automobiles.

New Retail Firms.

Vancouver. — Paterson, Goldie & Clark, hardware dealers, have opened a branch business at the corner of Lynn Valley Road and Centre Road, under the firm name of W. R. Clark & Co.

Staff Changes.

J. Perrault has joined the staff of the Geo. Taylor Hardware Co., New Liskeard. .He was for eight years with Geo. Stephens, Chatham, and latterly with Aikenhead Hardware, Limited, Toronto.

Business Changes.

Calgary, Alta.—H. S. Van Buren & Co., hardware dealers, have disposed of their stock to H. H. Todd.

Gilbert Plains, Man.—W. C. Inglis may dispose of his hardware business, C. C. Baker being mentioned as the probable purchaser.

Roche Percee, Sask.—J. A. Whiddon, hardware dealer, has admitted Jos. M. Splan as a partner.

Ridpath, Sask.—J. W. Haggard & Son, hardware dealers, have been succeeded by J. R. Watson.

Fire Losses.

Montreal.—Fire broke out in the hardware store of J. A. Bissonnet, 1813 St. Catharine Street East, on Wednesday morning, doing some damage to the stock. The loss is covered by insurance.

Saskatoon, July 1.—After a fire which raged for over three hours the big J. F. Cairns department store, the largest mercantile establishment in the city, is a mass of ruins, with the entire stock either destroyed by the flames or so damaged by water as to be almost a total loss. The fire is believed to have been started by defective wiring.

Winnipeg, Man.—Tees & Persse's warehouse was partly destroyed by fire a few days ago, the total damage amounting to $5,000.

New Firms in Business.

Forward, Sask.—Earl W. Bean is starting in the tinsmithing business here.

Briercrest, Sask.—The Miller Colway Hardware Co. have started in business here.

Personal Notes.

Col. Starke, of Starke, Sybold, Montreal, has left with his family for a few months' holiday in Europe.

Bert Brainerd, of the Dominion Cartridge Co., Montreal, is away on a fishing trip.

—⚙—

ACCUMULATION OF ORDERS.

Cleveland, Ohio, July 4.—The Iron Trade Review to-day will say:

In finished lines of iron and steel, mills are burdened with a large accumulation of orders, and are generally behind on deliveries, while consumers are urging shipments. Pipe makers have advanced prices on large sizes of pipe not included in the advance of June 1, $2 a ton, and are further behind on deliveries than at any time in some years. Advances in plates and shapes and merchant bars have shown no effect on checking the demand, and plate mills are becoming congested almost seriously. The generally higher wage rates for puddling for the new year have advanced prices on iron products from $1 to $2 a ton. There has been a generally firmer and higher price for spot furnace coke, because contracts for the last six months of the year have not been placed to any extent owing to the high prices demanded on long time deliveries.

The early July market for pig iron has been no exception to the rule of usual quiet and inactivity, so far as buying is concerned. The small tonnages that have been placed have been on a generally higher level in basic, foundry and malleable grades.

—⚙—

THE STRENGTH OF THE LOCAL HARDWAREMAN.

(Continued from page 32.)

has ordered an axe, and sees axes in the hardware store every day while he is waiting, he will be a little annoyed with himself.

The great thing for the retailer to do is to make the men see that they can get, locally, the same—or better goods—than those for which they send away. If the retailers do not make this evident they have no one but themselves to blame for the evil of mail order buying. Their greatest weapon in the fight against this is their ability to supply a need instantly.

The Observance of Weekly Half Holidays

Firms and Travelers Appreciate the Work of Hardware and Metal in Compiling List of Places Where Holidays Are Held—An Additional List.

The list of places in Ontario where holidays are being observed this year, which was published in Hardware and Metal, has proven a boon to the traveling man. By consulting this list, he is able to avoid cities and towns on the days when holidays are observed and so plan his itinerary as to escape bothersome delays from that score.

That the enterprise of Hardware and Metal in compiling this list has been appreciated is evidenced by the letters being received from individuals and from firms.

C. M. Strange, of Lewis Bros., Montreal, writes:

"You certainly are to be congratulated on the excellent manner in which you have gotten this schedule up and we are confident it will be appreciated, not only by the sales staff, but by the public in general."

"It is only another proof of the up-to-date manner in which your valued paper is being handled for the convenience of its readers."

The Sheet Metal Products Co., Toronto, writes:

"We can assure you that this list is much appreciated by us and a number of our representatives. We are notifying each of our representatives when the holidays occur as it will save them a great deal of time."

Letters of appreciation have also been received from a very large number of other firms.

Additional Places.

Since the publication of the list, information has been received with reference to the following places:

Amherstburg.—No half holiday.

Alvinston.—Half holiday on Wednesdays during the summer months.

Burks' Falls.—No half holiday arranged as yet.

Cayuga.—No half holiday.

Elmira.—No half holiday.

Fort William.—Half holiday on Wednesdays during June, July and August.

Gananoque.—Half holiday on Wednesdays during July and August.

Guelph.—Half holiday on Thursdays during July and August.

Goderich.—Half holiday on Wednesdays during July and August. Civic holiday will be Wednesday, August 7.

Park Hill.—No half holiday.

Rainy River. — Half holiday on Thursdays during June, July and August.

Sarnia.—No half holiday.

South Porcupine.—The stores close at 6.30 on Mondays, Wednesdays and Fridays during June, July and August. No half holidays arranged yet.

The following letter is self-explanatory:

Watford.—Half holiday on Wednesdays during July and August.

Ridgetown, Ont.

"In your issue of June 28 you advertise stores here as all closing at noon on Wednesdays during June, July and August, which is not correct as dry goods stores, all but one, close every day at 6 and Saturdays at 10 o'clock the year around.

The Craig Co.

Catalogues and Booklets

Gasoline Appliances.

Geo. W. Diener Manufacturing Co., Chicago, Ill., have issued a catalogue giving a comprehensive review of their products, which include gasoline appliances, hardware specialties, sheet metal specialties and forged tools. The list of goods shown, includes: Brazers, gas, painters', plumbers' and tinners' furnaces; torches of all descriptions; adjustable elbows; ash, benzine, fence, garbage and oily waste cans; gates; glue heaters; hand pumps; can handles; mail boxes; marking pots; engineers' oilers; ash, garbage, water and cement pails; salamanders; stove pipes and colors; tanks; ventilators; and a complete assortment of forged tools, ranging from box chisels to wiping cloths.

It is well illustrated throughout and contains a supplement devoted to vises, anvils and cement workers' tools.

Plumbers' Wood-Work.

The Becker Manufacturing Co., Marietta, Ohio., have sent out a very handsomely printed and illustrated catalogue of their full line of wood-work for plumbing fixtures, including tanks, seats, flushing tanks, tank and drain boards in a great variety of finishes.

The "quality" line of flush valves, bar hinges, post hinges and offset hinges are also shown.

Registers and Ventilators.

The Hart and Cooley Co., New Britain, Conn., have sent out their catalogue H, devoted to wrought steel registers, ventilators, borders, side wall registers and grilles. This is one of the most elaborately illustrated which has come to hand for some time, containing cuts of each article, illustrations of rooms showing "H & C." goods in use and pictures of tests and demonstrations. Many two-color illustrations are used. It is a most complete and interesting catalogue.

A supplement deals with the line of steel lockers made by this firm.

The Ideal Salesman.

The Toledo Cooker Co., of Toledo, Ohio, have issued an "instruction number" of "The Ideal Salesman." This booklet is issued for the benefit of retail clerks, the object being to make the clerks who handle fireless cookers better salesmen. In order to accomplish this laudable purpose, the book gives a number of concise and telling descriptions of the good points of the cooker and illustrates fully its manufacture. Interspersed with this practical matter are instructions for salesmen handling these goods as well as general talks of a helpful nature on the ethics of salesmanship. Still another important feature is the number of "selling helps" given—suggestions for advertisements, show cards, etc. Altogether, it is a most valuable book and salesmen will find this form of co-operation very valuable.

Richard Tiller Crane.

The latest issue of the Valve World is in the nature of a memorial number devoted to the life and works of the late Richard Tiller Crane, founder of Crane Co. It is most interesting and throws some impressive lights on the character of the deceased "ironmaster," whose influence was so strongly felt in many circles.

—⚙—

READY TO OPERATE.

Edmonton, June 10.—Twenty per cent. of the actual construction work has been completed at the 1500-barrel plant of the Edmonton Portland Cement Company, Limited, incorporated with a capital stock of $1,500,000, and there is every reason to believe that the mill will be in operation the latter part of September or early in October, at the least, employing 130 men. It is expected the output of the mill, estimated at from 1,000 to 1,200 barrels a day, will be used in Edmonton and the surrounding districts.

Geology has done much to clear up the mists of the remote past.

It can give us a picture almost in detail of the various processes through which the earth has evolved into its present state.

By the deductions of this interesting science the dawn of history is fixed and the event of man may be recorded.

Tracing the different ages of the globe from the glacial age forward man's development is delineated until the time arrives when he begins to fashion rude tools for his primitive needs.

Now this brings me to the conclusion that in one of those times of slow change and growth there must have been brought into history the prehistoric hardware store.

When the vast glaciers of the cold period had melted there followed the discovery of bronze, giving to that stage of the world's record, the name of the Bronze Age.

This is the time which it seems reasonable to think called into being the first hardware and consequently the original hardware dealer.

The first cooking vessels were made and used in the bronze age which preceded the iron age by an exceedingly long interval of time.

As the people became proficient in inventing and making utensils for domestic use also weapons and tools, they began to exchange among themselves and later with other tribes. And then some one more enterprising than his fellows collected a stock of edge tools, spears, hatchets and it is believed locks and knobs and founded a central depot for facilitating trade and barter.

It is maintained by one school of investigators that locks do not belong to this age but to the succeeding iron age.

However that which was said to resemble this device for fastening doors has been discovered in conjunction with other implements known only to the age of bronze.

It is also interesting for modern hardware merchants to know that the site of the store I am describing is indicated by the discoveries of science to have been in Central Europe.

As in our own time population moved towards the West and England became settled the emigrant tribesmen bringing the secret of bronze manufacturing with them.

From this obscure beginning sprang the historic guild of hardware and ironmongers whose vocation perhaps lies more closely to the progress of civilization than any other branch of industry.

Recall this feature of your business the next transaction you have with a doubting customer who is not in accord with your view as to the proper price you should receive for a keg of wire nails.

FIGURING EXPENSES.

In the good old days of high profits, it might be that one could perhaps afford to be ignorant of the exact cost of doing business, but not so to-day. Conditions are changed. Profits are not large enough to take anything for granted.

Paul's injunction to "prove all things" is good advice for the merchant. In order to know the cost of doing business we must have correct records of all items of expense, and this calls for the keeping of a proper set of book.

Let us put the items of expense under say five heads: First, wages; second, light and heat; third, horse and wagon; fourth, rent, taxes and insurance; five, sundries. Now, as to what is properly charged to the wage column, I want to impress upon you that not only the wages of your clerks, bookkeepers and delivery men be included, but also your own personal salary. In reference to this matter of proprietor's salary, I am afraid many merchants do not keep a correct record. In some cases the supplies for the table are taken out of stock and no record whatever kept of them. I maintain that a fixed amount should be drawn by the proprietor, and that his supplies taken from stock should be bought and paid for in the same way as any other customer.

As to the second and third columns, light and heat and horse and wagon, it is sufficiently clear as to why their own expenses should be charged up to them respectively. The fourth column, that of rent and taxes, requires particular mention . If one is the owner of the building, and not paying rent, he should undoubtedly properly charge up to the cost of doing business 6 per cent. of the valuation of the premises. The fifth column, that of sundries, should contain all items of expense not covered by other heads. This is a column that is capable of great variation, and requires most careful watching.

A Shortage is Felt in White Lead

Stocks in Toronto Are Practically Reduced to the Minimum—Some Firms Have no White Lead on Hand and Others Have a Small Amount Only—Are Retail Stocks Light Also?

Toronto, July 7.—A white lead famine has developed here. There is very little to be had in the city last week and hopes were held out that matters would improve but the situation is probably worse now.

The writer has spoken with representatives of at least half a dozen firms and has found that reports are invariably of an extreme shortage. One firm, which ordinarily has about thirty tons in stock, now has exacty 250 pounds and not another scrap in sight. Others state that, while they have a little on hand, their stocks would not be sufficient to carry them over more than a few days if they were to fill all orders.

The hardware jobbers, who do not carry very heavy stocks at any time, report that they are practically cleared out. Paint and oil jobbers are not so badly off as that but some of them at least are finding it impossible to fill all orders in full and are only making an effort to fill the orders which are really pressing.

On top of it all, demand continues pretty brisk. The advances in price have not driven buyers out of the market by any means. Realizing that the advances have been warranted by conditions and that it is quite possible the price may go still higher, dealers are ordering to meet their requirements.

Retail Stocks Short.

Nevertheless, travelers report that retail stocks throughout the country seem to be pretty short. If this is really the case, the demand will continue strong and, in fact, gain in strength as time goes on. There has been a heavy sale of white lead this year. It will probably become heavier.

One traveler states that he has noticed that quite a few retail dealers have more or less large stocks of old white lead on hand. With the present shortage in the supply, this is the time to get old stock cleared out. The dealer who is wise will seize this opportunity to dispose of all old lead that he is carrying.

Weekly Market Report --- Metals

METAL NOTES

Lead is very scarce. In Toronto sheet lead is being melted up to meet the demand.

The price of lead has advanced.

Tin has gone down 2 cents, as a result of weakness on the primary markets.

Business generally is reported to be good.

MONTREAL.

Montreal, July 4.—There is little change in the general trend of the market. Still the tendency is upward, and it is generally stated that more advances will be made locally within a few days. As it is, solder, both bar and wiping, has been advanced half a cent a pound.

Lead, perhaps, shows the greatest advances on the primary market. It is now at a new high level, and the local quotations seem bound to advance quite materially as a result of the English advance.

Tin and copper are both acting somewhat strangely. Both have shown small declines, and not in either case does there seem to be good cause for this. Locally copper is far more likely to rise, than to decline. Indeed, an advance is frankly predicted by some who are closest in touch with the metal.

Lead's Big Advance.

Lead.—On Monday the English market reported an advance of £11 3s. And this has been followed by subsequent rises. The local supplies are only fair, and the good sized orders which are being received give some cause for wonder, if the demand can be met with any degree of ease. It is practically certain now that a further advance may be expected in all kinds of lead products.

Tin.—Some supplies have been received in New York—five cargoes to be exact, but less than 300 tons have been taken off these. The tin was shipped from continental ports at great inconvenience, and it is surprising that it should be sold as low as it is. Indications are that there will be an advance in this metal.

Copper Falls, But!

Copper.—At long and at last this metal shows a decline on the primary market. But the drop, it appears does not represent any falling off in the value of the metal. Stocks have decreased slightly. The supply is not materially changed, and there has been little difference in the consumption. It appears that the decline is brought about by some largely interested who are thus trying to scare out a speculative element. Locally a further advance is predicted, instead of a drop. The manufacturers of copper products have not increased their prices in accordince with the rise in the ingot metal. But they cannot continue to do this long, and it is predicted that the advance is to come shortly.

Spelter.—The metal is reasonably plentiful, but handlers are having to pay about 7c for it. This, when expenses are added, would seem to point toward a higher price being charged the buyers of moderate sized lots. There is talk in the States of a still higther figure being asked for spelter, but if the figure reaches 7¼c, European spelter will at once come into competition.

TORONTO.

Toronto, July 4.—The feature of the metal market here is the scarcity in lead. There is practically none in sight, and this in the face of an insistent demand. It is impossible to say when relief will come, for there is little pig lead in sight, and the market seems to have resigned itself to a shortage for some time at least.

Generally speaking, business has been very active. The consumption of all metals is growing apace. "We are on the eve of a record expansion," said one man to-day. "Demand is good in all lines. In some lines it is bigger than we can handle with our present stocks."

A Severe Shortage.

Lead.—The scarcity in lead is very pronounced here, so pronounced that the situation has become acute. The different firms are vainly striving to secure new supplies, and the competition has become very keen. In fact, they have been forced to the expedient of melting sheet to meet the demand. The situation is indeed serious when this step becomes necessary.

In view of the extreme shortage, the price of lead has been advanced ¼c per pound.

The general opinion is rather pessimistic with regard to the lead situation. "We are hoping for immediate relief," said one, "but we hardly expect that it will come very soon."

Tin is Down.

Tin.—As a result of the easier tone on the foreign market, tin has gone down here 2 cents, being quoted at 48 cents. The market has become highly irregular, but in view of recent advices from abroad about the new speculative interest in futures, the present decline is being regarded with some degree of suspicion. It is apparent that a strong bull tendency is growing; many would rather buy than sell.

Locally the demand has been maintained steadily.

Copper is Weaker.

Copper.—Despite predictions of an impending advance in copper, this metal seems to have become weaker. No change has been brought about in prices, but locally the copper market shows some degree of weakness.

It is interesting to note the following commentary on the copper situation:—"The London market is easier again today and Standard closes at £76 15s, which is on a par with the low price of June 24th, the day of the heavy decline. Our advices say that the big dealers in London are back of this reaction, not because they think badly of copper, but they figure that by frightening some of the specualtive element out it would enable them to buy cheap. The reports on trade conditions in England and Germany are very cheerful, much more so than some of the statistics indicate. For example, the figures issued by the British Board of Trade show that the consumption of copper in England for the five months ending May was actually 1,000 tons less than the corresponding period last year! What does this mean?"

Spelter.—There is no change here. Considerable interest is being shown, and business is seasonably brisk.

WINNIPEG.

Winnipeg, July 2.—The manager of one of the big structural steel works here, interviewed recently, said that steel is now being used extensively in buildings to prevent shrinking of joists. Thus the more building, the greater demand for this product.

"In our own plant," he said, "we are running full blast day and night to supply the demand. We find that the progress not only applies to Winnipeg, but to all the West as well. In this city new buildings are going up in practically every block. This is not confined to any one section but is general. Our company is supplying steel for over four hundred separate buildings."

The city building inspector estimates the year's building at $20,000,000. Over $11,000,000 in permits have been already issued.

Plate is still scarce although there has been some relief to the situation of two weeks ago.

No changes in prices are reported.

Weekly Market Report --- Hardware

TRADE IS GOOD.

The warm weather has stimulated demand in some lines. Although business is very good. Jobbers report that the past month showed a very satisfactory gain over the same month last year.

An advance has been declared in rope. Shot is also up as a result of the increases in lead.

MONTREAL.

Montreal, July 4.—Though there has been a slight let up in the volume of business done, the market has not been without interest. Still, price changes are being noted, and these, while not of great size, are yet causing some speculation. It is wondered if these are the last, or whether more changes in an upward direction may be expected.

The principal business just at present is in harvesters' tools, for which a great demand has sprung up. The orders—though of the sorting variety—are yet of considerable size.

Household goods, too, are strong, while gardening tools, sprinklers and hose are being ordered. The jobbers are not receiving an exceedingly heavy call for these lines, but the retailers are feeling a heavy demand. It is the first of the year, for the cold, unseasonable weather has kept down the call for this class of goods.

Rope Rises ¼ Cent.

Perhaps the price change of greatest importance is that in rope. Generally there has been an advance of¼c. This, following a similar advance of a week ago, is a matter of some importance. Sisal rope is now quoted at 8¾c. British Manilla at 9¼c, while pure Manilla has advanced from 10¾ to 11 and from 11 to 11¼c.

The cause of this advance is an increased cost of raw material, the manufacturers now having to pay considerably more for the hemp which they are using.

Shot Discount Change.

The high cost, and the scarcity of lead, has brought an increase in the cost of shot. The discount upon the lists is now quoted at 5 per cent.

Household Goods.—The preserving season is about at hand, and the hardware merchants are preparing to meet the demand. Cherry stoners are moving well. So are kettles, and sauce pans. The retail rush has hardly started yet, but the word received about the crops indicates that this will commence in a few days.

Harvesters' Tools. — Supplementary orders for this class of goods are now being received. Hay forks, rakes, corn knives—these and similar goods are in demand. The quietness in other lines enables them to be shipped promptly, which is a fine thing for the retailers.

How About Builders' Hardware?

Builders' Hardware. — The expected advance here has not come. Now there seems to be some doubt if it will come at all. There has been no weakening in the copper situation. Rather are prices higher now than they were a fortnight ago, yet the cost of the articles made from this copper have not risen. Competition is responsible for the continued moderate prices.

Sporting Goods.—Except for the change in shot no price differences are noted. The demand for goods has grown rapidly. Every class of summer sporting goods are moving now. The accessories too—the balls for baseball and golf enthusiasts—are being bought largely.

TORONTO.

Toronto, July 7.—This week has been a very busy one in hardware circles. The holiday broke into the routine of work and things have been going a little faster since to make up the lost ground.

Business is reported to be very brisk. It has gained rapidly during the past two weeks, owing to the increased warmth of the weather. Lines which were moving slowly previous to that time are now going with a rush. The rise of the thermometer was as a signal almost for business to begin.

The past month was a good one in point of business volume. "We showed a good increase," said one jobber. "Usually business falls off during the 'dog days' but there has been no sign of this so far."

Feature of the Week.

Harvest Tools.—The feature of the week has been the heavy demand for harvest tools. Everything that the farmer needs to harvest his crops now sells well. Forks, scythes, implement parts, binder twine, gloves and so on are being shipped out as fast as the railways will carry them.

Warm weather Goods.—There has also been a rush of orders for warm weather goods. Screen doors and windows have come into demand again and the refrigerator trade is by no means dead. Ice cream freezers are selling well. There is also a demand springing up for electric fans, which are carried in most hardware stores.

Advance in Rope.

Rope.—An advance has been declared in the price of rope. Quotations now are:—Pure manila, 11¼c; British, 9¼c; sisal, 8½c. The advance is due, it is said to the increased cost of hemp to the manufacturers.

Household Goods.—There is a good all around demand. Preserving season is now at hand and there is consequently a good, steady call for preserving kettles, sauce pans, strainers, cherry pitters, hullers, etc.

Builders' Hardware.—The demand for builders' hardware is growing just as was predicted. The building work throughout the country has been hurried along and hardware is now being needed. It is said that a scarcity of brick threatens which would tie up building operations to some extent and ultimately check the sale of builders' hardware. No such effect has been felt so far, however.

Sporting Goods.—The demand in all lines is now heavy. The warm weather has increased the popularity of aquatic sports and there has been a call for paddles, canoes and motor boat supplies. Fishing tackle is also very much in demand.

An advance has been made in shot, owing to the rapidly increasing cost of

---

WINNIPEG.

Winnipeg, July 2.—Extremely hot, dry weather has caused no little uneasiness in some quarters and there is no denying that some sections of the country are suffering from drouth. This does not apply to the province of Alberta which has had abundant rain in the past week. There is nothing existing anywhere to justify a crop scare but straw

Concluded on page 50.

Weekly Market Report---Stoves

GAS STOVE DEMANDS.

The feature of the market has been the demand for gas stoves caused by the arrival of warm weather. The retailers are now selling more briskly and are going back to the manufacturers for supplies.

MONTREAL.

Montreal, July 4.—The principal interest in this market at the moment relates to the furnace branch—for the increased cost of plumbing goods, which is predicted, is likely to make the installation of heating systems more expensive. Men figuring in contracts will have to bear the coming advances in mind.

Generally business is very satisfactory. The hot weather has done a good deal to bring about many of the sales which have been delayed. Gas stoves have been moving again, and while the heat is not conducive to the sale of ranges, it is making the dealers think that fall is not so very far off, and that they had better prepare for the heavy demand to be expected then.

Heavy Call for Refrigerators.

The demand for refrigerators, which was remarkably good through the cool weather of spring, has grown greater. Those who delayed purchasing are now finding that they must get one of these food preservers. A few steaks gone bad, will—at the present price of meat — make a housewife see that a small expenditure for a refrigerator is genuine economy.

Kitchen Goods. — This is one of the best lines at present. The preserving season is at hand, and preserving season brings with it a big demand for kettles and sauce pans. Retailers have been laying in these, and now are displaying them prominently so as to attract the passing trade.

Summer Stoves.—As a general thing all the oil and gasoline cookers that are going to be sold are disposed of before the middle of July. It seems that the business in these lines will last somewhat longer this year—partially owing to the backward spring. The call for oil stoves at present is large. Those who can not enjoy the comfort of gas cooking are taking advantage of the short fires, the coal oil and gasoline make possible.

Trade With Emigrants.

In Montreal — which is the point where so many settlers change from ship to train—a big trade is being done in this class of cooker. The emigrants buy small coal oil stoves before setting out for the West, cooking their meals on these as they go.

Ranges and Furnaces. — The immediate retail demand for ranges is not great, but the prospects of a coming demand are all that could be desired. Furnaces too are evidently to be much wanted. Those who know they will need these would do well to remember that they can only be sure of prompt delivery by ordering early. The manufacturers are already facing a rush, and it will be a case of first order first serve.

TORONTO.

Toronto, July 4.—The warm weather has had a marked effect on the demand for gas stoves. People who have been "holding off" are now face to face with the necessity of securing a gas stove to insure comfort in the preparation of meals during the warm weather. Dealers in consequence are getting plenty of orders, which in some cases they cannot fill. The manufacturers are getting plenty of orders in turn and are making shipments as fast as they can.

There is also at the present time a heavy demand for oil and gasoline stoves for use at summer homes. The yearly exodus to the summer resorts is now in full swing and most of the people are investing in a stove of some kind to take along for cooling and heating purposes. Oil stoves are mostly in demand but there is also a larger call than ever for gasoline stoves. The manufacturers report a healthy increase in all these lines.

It must ont be supposed, however, that business is restricted to summer stoves by any means. Dealers are showing more of a tendency than ever before to place their orders for the fall stove trade well in advance. The travelers have little difficulty in getting dealers to draft up their requirements. Earlier shipments are being specified in many cases.

The travelers also report that the retailers seem to be anticipating a very brisk fall trade. The last two years seem to have convinced them that the demand is growing continually and that increases in trade are assured. The result is that requirements for the present fall trade are being estimated with liberal confidence.

Ranges.—Demand is reasonably, perhaps it would be better to say seasonably, brisk. While quite a number of orders for fall trade are being placed, dealers are also putting in demands for immediate requirements. Small orders are being placed and it is quite apparent that a little business is still coming the way of the retail dealer.

Heaters.—Very little demand is noted in these lines. Booking for the fall trade is starting, however.

Furnaces.—The amount of business done in this line is more than satisfactory. Quite a few furnaces are being sold. The satisfactory feature lies in the fact that the fall trade promises to break all records. Furnace men have so much work in sight that their demands will be extremely heavy.

Heating Accessories.—There is a good demand for all heating accessories at the present moment.

WINNIPEG.

Winnipeg, July 2.—The extreme heat of the last ten days has brought home to many the fact that a gas stove was one of the things they had to have at once, and a brisk business in gas ranges, oil stoves and electrical cooking apparatus has resulted.

In other lines business is normal with a brisk enquiry for different systems of heating by steam, hot water and hot air.

There will be a very busy time when the better class of residences now under construction are ready for putting in their heating plant.

HARDWARE MARKETS.

(Continued from page 49.)

is likely to be short and yield light unless rain comes speedily.

A circumstance that is serious in Winnipeg is the outbreak of extensive labor troubles in the city especially, involving the building trades, carpenters, steel construction workers and others and on Saturday work on all big buildings was practically suspended. All lines of business will suffer should not a speedy settlement be arrived at.

In the meantime, wholesale hardware merchants are busy and the retail trade at country points is brisk this being the between seasons' opportunity of the farmers to get building fences and machinery up to requirements. The only change of prices reported is an advance of ¼ cent per pound on pure manilla rope.

Country orders for fall sporting goods, guns, ammunition, etc., are now coming in freely.

Methods of Retailing Paints and Varnishes

Going to the Manufactories for Training

Would Not This Policy Enable Clerks to Better Present This Class of Goods—A Class Which Has Improved Faster Than the Methods of Selling?—The Present a Fine Time to Think of Such a Thing.

On the farm the hard work of the year is now in progress. Hay is cut, and all efforts are being made to get it in the barn before any rain comes which will tend to decrease the value of the crop. The cities are partially deserted. Again those who remain wonder why others insist upon leaving their comfortable homes to go to places where they must rough it. However, the people have gone. Many homes are vacated.

All of which means that a time of year has come when there will be a lull in the paint trade. Farmers are too busy harvesting their crops to do any painting; and those who are on a summer vacation will not think of this kind of work. Later, they will do something to the summer cottage, and upon their return there will be work to be done in the city home, but for the time being there has come a lull.

An Opportunity to Plan.

Such a state of affairs is not altogether annoying. It gives the manufacturers a chance to catch up with their orders—and they badly needed such an opportunity. It gives the retail dealers too, a much needed chance—a chance to plan their fall campaign.

In the past, fall has been considered a fairly good paint season, but not to be compared with spring. Still there are some who hold this opinion, yet more and more fall is looming up like a fine painting time. Spring, probably will always be the big season, but fall offers many opportunities to the householder who needs to do some painting. It offers more opportunities now than ever before, for the paint styles have varied. There has, of late, been a great widening of lines. Now the manufacturers offer not only exterior paints, floor paints, and such goods, but also wall paints, and enable the finishing of a room in beautiful style.

Why Not a Course of Study?

Perhaps the best season for the sale of these lines is the fall, but the trouble is that good salesmen are needed, and salesmanship of paint has not developed as rapidly as has the manufacturing end.

It is here that the present lull affords an opportunity. It makes possible the serious study of paint, so that its advantages may be brought home to the store customer.

H. Occomore, of Guelph, has made it a point to have one of his clerks an expert in stoves. He has sent this man to the factory where the line of stoves handled are made. Has, in short, given him every opportunity to learn about the stoves so that he can explain their advantages to probable purchasers.

Why could not some such policy be followed as regards paint? Though there is some complaint of the carelessness of clerks, there are yet many clerks who have a real interest in their work. Some take a special delight in the paint department—the writer can think of several such. Suppose these men were allowed a week or two in the factory in which is made the paint which they sell. Would they not come back primed with information about it? Would they not be able to advise the interested customer as to just how he would have to proceed to paint the walls of a certain room?

Would the Manufacturers be Willing?

The great need of salesmen is knowledge, and how could this knowledge be better secured than by studying at first hand the way the paint is mixed?

Window display of paints in the store of the summer Hardware Co., Moncton.

It may be argued that the Manufacturers would not be willing to have a novice roam about their factory. It is impossible to answer for all manufacturers, but one or two have spoken favorably of such a proceeding. It would mean money for them. It would mean some outlay—for the man who explained the working of the various machines to the paint salesman would be interrupted in his regular work—but the returns would come in the added sales which that salesman would make when he got back to selling the paint. He would not hesitate when a customer complained that the paint he was offering cost more than that sold by another dealer. He would get right to work explaining why this should be. He would talk of the manufacturing process as he had seen it. He would tell what was put in the paint. He would talk quality—than which there is nothing which exerts a stronger appeal to-day.

Such a salesman would know how the wall finishes would need to be applied. He would have heard some of the factory's paint experts explain these, and he would have caught not only their phrases but their enthusiasm.

He would, moreover, have learned much about ordering and stock-keeping. He would know that at certain seasons an order must be sent far in advance to assure prompt delivery. He would learn that though a wide stock is necessary there need not be a tremendously heavy stock of any one color. He would learn how to use the manufacturer's advertising cards, and how to keep it prominently forward that in the store paint is to be secured not only for exteriors, but for floors, for buggies, for walls—paint, for every purpose in fact.

A window which gives this wide vision of the stock which is to be secured within was recently arranged by the Sumner Co., of Moncton, and is here reproduced. Notice how the very number of cans used in the display gives the idea of a wide assortment on the shelves. There are cards saying something of floor painting; others advising carriage painting and machine painting. The window had the punch. It brought the need of these things home to the passers-by, and brought immediate results.

Prepared Paints are Gaining Ground

People Are Becoming Convinced that it Pays Them to Buy Prepared Paint Rather Than to Trust to the Painter to Mix it up—A Splendid Opportunity for Profit Here for the Dealer.

From indications noted of late, one is inclined to think that prepared paint is gaining ground, particularly in the householders' patronage. There are so many reasons which may have a bearing on this situation that it would be impossible to attribute it to any one cause.

Prepared paint is undoubtedly coming more to the front every day. The consumer is beginning to realize that it pays, and pays well, to paint almost everything, on which a coat of paint would serve as a protection or an adornment. Through the extensive national advertising which the paint manufacturer gives his goods, the householder is being educated to the fact that it is preferable to have ready mixed paint applied to his buildings, than to allow the painter to supply his own dry colors, oil, etc., and mix them himself. He is being shown that to use a standard, well advertised, good quality line of paint, is to insure himself against the ill use which painters sometimes practice on this line.

The use of benzine, particularly in large quantities, may be a factor in the sale of so much ready mixed paint. Painters are now using this article to some extent, in many cases, exclusively in place of turpentine, so it is said. In conversation with Hardware and Metal, one dealer stated that the paint applied by some painters, was fully 25 per cent. benzine. This undoubtedly acts as a dryer, and also covers more space than the turpentine, but on the other hand, it usually only lasts until the painter has left the job. It evaporates in a very short time and the result is a poor job.

The dealer who gets after the householders' trade will undoubtedly reap a rich harvest in profits. We have an instance in mind which illustrates this very clearly. On the same street on which a prominent hardwareman lived, there were 10 houses in course of erection. He canvassed the owners of these with such good effect, that he sold the paint for the whole 10.

Assistance in Decoration.

The Decorative Department run in connection with practically all the paint concerns should be a great force in the sale of ready mixed paints. With the assistance of this department of his paint house, the dealer should have no cause for worry if it is left to his judgment to select the color combinations which will be most suitable for certain surfaces. If, when the job is complete, it is satisfactory in every respect, the owner who has done the painting himself will look with pride at the fruit of his efforts. The average man will swell with pride at something particularly well done with his own hands, whereas, if the same results were obtained by an experienced decorator he would in a great many cases be inclined to look on it as a thing only naturally to be expected; which is undoubtedly true.

The dealer who is handling advertising and pushing consistently, a good quality line of paints, is not only reaping present profits but is laying the foundation for a reputation for satisfactory, high-class merchandise.

A final word. Do not put your stock of paint at the back of your store where it gets covered with dust and dirt. Paint cans usually seem to get their fair share of this without putting them at the back where they are overlooked. Keep the paint to the front, give it a share of your window displays and advertising and watch the results.

NO FURTHER REDUCTION.

Ottawa, Ont.—The Evening Citizen in commenting on the recent remission of 50 per cent. of the duty on cement, says:

"It is wholly improbable that any further action will be taken by the Government in regard to the cement duty. The action taken in remitting one-half of the duty is considered generally to be pretty drastic, though certain interests in the West are representing that it does not go far enough. The situation which called for a reduction of the duty was a special case, to meet which exceptional action had to be taken. There is no reason to anticipate, however, as hinted in certain quarters, that it is the thin end of the wedge and likely to be further extended as regards cement or other commodities till there is full inquiry into the tariff generally."

FEATURING BUILDERS.

Saskatoon, Sask.—The Morton Hardware Co., who have adopted the slogan, "The Square Deal Store," are taking advantage of the wide scope of building operations in this city by featuring builders' hardware. They are advertising the fact that they have shown careful selection of high-class goods. "Everything the best" is the description they apply to their stock. This appeal for the best class of trade should be found fruitful.

The M-L Line is the Direct Route to Prosperity

M L PAINTS

Under weather tests ML Paints have stood up better than the many "best" paints in the market. You can surely get particular trade with ML Paints.

M L FLOORGLAZE

A quick drying, glossy, wear-resisting finish—good for any paint purpose. In solid and transparent effects. Many shades. Well advertised.

ELASTILITE VARNISH

A favorite with folk who know that quality pays though it seems to cost more at first. Elastilite is splendid for any varnish need, indoors or out.

WE put quality into our paints and varnishes. The dealer gets the benefit. The proof lies in our continual growth. Our latest help to the dealer is decorative aid. To be prosperous, the ML Line should be on your shelves—the finishes that help the retailer.

DECORATIVE AID DEPARTMENT---A Help for Every Decorator and Dealer. Color schemes, and technical information given, by which any dealer may sell exactly the right paints in the right shades to properly decorate any house. Stencil designs, etc., included in information. This plan helps you get more business. Services are free. Write for Decorative Aid Booklet.

Many other good members in the ML Line. Get price list, color cards ana samples soon, from

Imperial Varnish and Color Company, Limited, Toronto

6-24 Morse St., Toronto 108 Princess St., Winnipeg 365 Water St., Vancouver

PROGRESSIVES

"All humanity," says one writer, "is divided into two classes, viz: Progressives and Standpatters. The Standpatters have one eye shut; the Progressives have both eyes open."

The merchant who clings to an inferior line from mere sentiment or lethargy belongs to the Standpat class. The dealer who is ready to weigh the merits of all propositions is a Progressive.

"High Standard" Agents are Progressives—every one of them. They were open to conviction and compared the relative value of different paints. They were on the lookout for something better—and found it.

Are you a "Progressive" or a "Standpatter"?

Weekly Market Report --- Paints

PAINT NOTES.

Business has fallen off a little, but is still good. June was a record month.

White lead is very scarce, and there is talk of another advance pending.

Linseed remains the same, and in some sections is reported to be scarce.

MONTREAL.

Montreal, July 4.—White lead seems bound to hold the leading roll in the paint cast. For weeks now this product has given the greatest interest to the market. It continues to do so, for another advance now seems certain. The corroders are expected to meet shortly, and indications are that they will decide upon another rise. They can hardly do other than this, for the leaps pig lead has been making, make the manufacture of white lead at the present figure unprofitable.

The greatest interest in the white lead situation relates to the extent of the coming advance—none seem to doubt that there will be a rise. A month or more ago there were several rises of 10 cents. Then came a step upward of 15 cents, to be followed a fortnight ago by a 25c. advance. The coming rise seems hardly likely to be a very small one. If the corroders are to cover the advance in the pig metal they will have to set their selling price considerably higher than it has been.

Linseed Out of Market.

Outside of lead, linseed oil is causing the greatest interest, though the general scarcity of paint and paint sundries is attracting attention. Linseed is almost out of the market. Quotations are more nominal than any thing else. Mixed paints generally are still in demand, and the manufacturers are having some difficulty filling orders.

Linseed Oil.—Crushers are unable to fill all their orders. The paint manufacturers are husbanding their supplies. Generally there is a tight condition of the market. "What are you quoting on oil?" asked a buyer of a Montreal sales manager. "One dollar and one dollar three," replied the sales manager, "but there is little use quoting. We have not the oil to supply."

Seed is scarce. While the transportation facilities have improved there does not seem to be enough seed in the West to supply the demand. Too much, apparently, has found its way to Duluth. Prospects for next year are encouraging. A considerably larger acreage is being sown with flax than was last year. But after all this will have but little effect on the local market, as our prices are largely regulated by the American price, plus the duty.

Glass Price Seems Steady.

Glass.—The handlers have not had a meeting lately, apparently having abandoned the idea of putting up the price at once. Conditions in Belgium have quieted down, and there does not seem as much reason to expect that a higher price will be charged there. It would appear that the present quotations will obtain for some time.

White Lead.—During the week pig lead has reached its highest point—considerably above the high of last week. On Wednesday there was a slight decline, but that loss was quickly regained. There may be more to report in a few days.

Paint.—Now there is a slight let-up in orders—but a very slight one. The demand for paint has been tremendous. "How do you account for this," a western paint salesman was asked, "in a season when the weather was so unfavorable."

"Look at the building permits," he replied. "They tell a great deal of the story."

TORONTO.

Toronto, July 4.—Although the volume of business generally speaking is smaller than it was two weeks ago, it is still so large that the manufacturers and jobbers are not finding it the easiest matter in the world to meet the demand. Business is exceptionally good for this time of year. All reports are to the effect that the past month of June was a record one. "We have never known so busy a June in past years," said one man. "Our sales have been away in excess of last year, which was a pretty busy year at that."

There is still a scarcity of white lead and this constitutes the feature of the market. Prices have not been altered since last writing.

Oil is Firm.

Linseed Oil.—The price of linseed oil is still $1.08 for raw and $1.11 for boiled and it appears pretty firm at that figure. There is still a good demand although orders are not coming as briskly as they did two weeks ago. Stocks are in better shape although some firms report that they are pretty short.

Turpentine is Steady.

Turpentine.—There are no developments to report. The price of turpentine is still quoted at 68 cents. The demand is seasonably brisk.

Lead Scarcity.

White Lead.—The lead scarcity is dealt with more fully elsewhere. The situation here is indeed serious. The price, however, has remained the same, despite a rumor toward the end of last week that an advance has been declared. This was probably due to the fact that dry lead had been put up in price. White lead is very firm, however, and an advance in the near future would not cause any surprise here.

Glass.—The active season is still some distance off but business is nevertheless fairly good. Import orders are beginning to arrive now. All anxiety on the score of the labor troubles in Belgium seems to have died down and, although the situation there has not absolutely been quieted down, the Canadian importers are confident that nothing will transpire to interfere with shipments.

Putty.—Business is reported to be fair. Prices are as follows:—Standard bulk in casks, $2.40; in 100-lb. drums, $2.55; in 25-lb. drums, $2.65; bladder in barrels, $2.80. Pure putty prices are as follows: Bulk in casks, $3; in 100-lb. drums, $3.40; in 25-lb. drums, $3.50; bladder in barrels, $3.40.

Good Sorting Business.

Prepared Paint.—Although this is ordinarily a dull season for mixed paint, there is still an exceptionally good sorting business. The manufacturers are beginning to catch up with back orders but, in the face of the continued demand, it is rather slow work.

In the meantime, rumors of an impending advance in the price of prepared paint are still heard.

WINNIPEG.

Winnipeg, July 2.—The bright dry weather has given a considerable impetus to the retail trade in paints and oils and business has been exceptionally brisk with a most satisfactory outlook for future trade.

An unfortunate strike involving some sections of the building trades in the city may seriously effect the paint trade should it spread to other trade unions. There will be much loss and inconvenience on all sides if a speedy settlement is not reached.

No changes in prices are reported except that flax seed is much weaker than at the time of the last report. White lead and all lines into which it enters as a factor are very firm.

Dependon——Light Hard Oil Finish.

Everlastic——Quick-drying Floor Varnish.

Gold Medal——Inside and Outside Varnish.

—These three varnishes meet all the regular demands of your trade—simplify your varnish stock—increase your varnish profit.

If any part of your house or your customer's house, is in need of varnishing, the requirement is met by one of these three B-H Varnish Specialties—Gold Medal, Everlastic, Dependon.

GOLD MEDAL.—If the front door, porch, ceiling of bathroom wants brightening, Gold Medal, Inside and Outside Varnish, gives pleasing results with its easy flowing action, and will protect the exposed surface with a durable coating, which will fight the effects of moisture and changing temperature.

DEPENDON.—If the furniture, wall, inside door, or any interior work, of either hard or soft wood, is in need of finishing or renovating, Dependon dries free from tack in a few hours, and can be polished, if desired, in twelve, stands hard wear and dries with a brilliant lustre.

EVERLASTIC Quick-drying Floor Varnish has these special qualities. It dries hard and makes a very durable coating. It is elastic and tough. It does not show heel marks nor scratches easily. It dries quickly. Has a fine lustre, and can be walked on the next day after application.

These varnishes are sold in beautiful, lithographed gallon, half-gallon, quart, pint, and half-pint cans, imperial measure. The packages make a most attractive store display. Handsome lithographed illustrated signs will accompany your order.

377-387 CARLAW AVENUE, TORONTO
Established in England in 1834
(M-3)

HOW ABOUT YOUR PAINT OIL DEPARTMENT?

If you could find a way to increase the profits in your paint oil department you would at least investigate it, wouldn't you? Then why not take the time NOW to increase your paint oil profit by investigating the

BOWSER PAINT OIL SYSTEM

We have installed systems for many of your fellow merchants—it pays them—it will pay you.

You can get one outfit or a dozen, just as your requirements demand. You don't have to invest much money but you get enormous returns.

The Bowser not only prevents all waste and over-measure, but it gives your store tone and attractiveness. It draws trade because you can give better service and cleaner oil. The pumps measure the oil directly into the customer's can—no measures nor funnels. It computes the charge and counts the gallons.

Send a card to-day for free book No. 15.

MURESCO

30,000,000 POUNDS SOLD IN 1911

WHY?

BECAUSE

It covers more surface and covers it better with one coat than any other similar material on the market.

Of the nature of its ingredients it is highly sanitary.

It does not rub off, crack, peel, blister or show laps when properly applied.

It is so easily applied.

Every lot manufactured is carefully tested before shipping.

Paint and Varnish Removers

MR. DEALER: When you buy Paint and Varnish Remover remember that QUALITY is more important than Price. A good Paint Remover is a help to the painter; a poor Paint Remover is a nuisance. The fact that all the leading manufacturers of paint and varnish in Canada and the United States who handle paint removers at all are licensees of this company and manufacture under our patents is the strongest possible testimony that the only practical, satisfactory and efficient removers on the market to-day are those covered by our patents.

SEE THAT EVERY CAN IS MARKED "LICENSED UNDER CANADIAN PATENT No. 78,586"

The above Canadian patent corresponds to our U.S. patent No. 714,880, which is the basic patent under which modern paint removers are manufactured. The following well-known and highly respected Canadian companies sell paint and varnish remover manufactured in Canada under our patents:

	NAME OF BRAND
The Sherwin-Williams Co., Montreal, Canada	"Taxite"
International Varnish Co., Ltd., Toronto Canada	"Klensa"
Pratt & Lambert, Inc., Bridgeburg, Ontario, Canada	"Expedite"
British American Paint Co., Victoria, B.C.	"Bapoo"
Mount Royal Color and Varnish Co., Montreal, Canada	"Scrape-off"
James Robertson Co., Ltd., Toronto, Canada	Robertson's Paint and Varnish Remover"
Sanderson Pearcy Co., Ltd., Toronto, Canada	"Devolite"
Stewart & Wood, Toronto, Canada	"Solvo"
Martin-Senour Company, Ltd., Montreal, Canada	"Martin-Senour Paint and Varnish Remover"

The character and standing of these companies is a guarantee to you that the paint remover sold by them is the best that can be produced.

You take no risk when you buy one of the licensed brands of Removers. They are harmless and efficient. They contain no carbolic acid or alkali. They are neutral.

Chadeloid Chemical Company

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

"BEST ROOFING WE HAVE"

Not long ago, the Robb Engineering Co,, Limited, of Amherst, N.S., wrote to us in response to an inquiry as to how their roofing was getting along:—

"Gentlemen:—Referring to our Amatite Roofing, we examined a few days ago the roof covered with this material in 1907 and are pleased to advise that we think it is the best roofing we have around our premises, and as far as we are able to speak from experience with it during the time it has been on, we would not hesitate to recommend it,

(Signed) A. S. ROBB, Superintendent,"

Amatite ROOFING

Amatite has not been on the market many years, but regarding the roofs which were laid in the early days, we are now receiving many letters like the above.

The fact that Amatite needs no painting is very important; for it means that the maintenance cost is nothing. This saving would justify us in charging more for Amatite than the usual price for ready roofing, because it's worth extra money not to have to paint it. Amatite, however, is lower in price than other roofings of the same grade. Use it and after a few years you, too, will say, "it is the best roofing we have."

Sample and booklet free on request. Address our nearest office.

Each FORD Feature Means Money To YOU

Ford's Bit Extension is the newest, the best and the most practical ever made.

It combines the best points of other makes with several exclusive **Ford** features, the combination being an extension that has absolutely no equal on the market to-day.

Each feature is a time, labor and money saver to the purchaser, for the **Ford** does **more work, better work** and accomplishes it easier and in less time than all former clumsy working extensions.

Each feature is a talking point—a strong selling argument and

EACH ONE CLINCHES A SALE

because of its superiority over the ordinary extensions.

Electricians are very enthusiastic over the **Ford**, and without exception pronounce it the first and only really practical extension ever produced.

It sells for the same price as inferior extensions, but the satisfaction it gives is ten-fold greater.

The demand is steadily increasing, as it becomes known it will be still greater. Are you prepared for your shares of the trade that's sure to come? If you have not stocked up with this new extension, we shall be pleased to send you advertising circulars, price lists and name of nearest jobber.

A Common Sense Talk

AIR IS CHEAP. You do not pay rates for air like you do for water, yet a big fuss is made over the impurity of water and very often no thought is taken of the impurity of the air breathed from day to day and night to night.

Crowded rooms, whether in public places, schools, opera houses or factories, require ventilation as well as the private dwellings.

House Building is a Science Nowadays and no Building is Complete Without one of our J. W. Harris Ventilators.

THE VENTILATOR ITSELF IS AN ORNAMENT and can be made to suit the character of the building, either as to size or as to quality of material.

MONTREAL, Dec. 4th, 1905

MESSRS. J. W. HARRIS MFG. CO., Ltd.
City

DEAR SIRS,—
In answer to your letter of the 25th ult., I must say that I am very much satisfied with the results of the "ZEPHYR" Ventilators.

Yours truly,
W. CHAMPAGNE,
191 St. Paul St.

Dealers everywhere will find a double profit in handling this ventilator. Write direct for catalogue and booklet to-day.

Learn about our system of ventilating. A pleasure to send books.

Each Basic Invention Brings New Wrench Demands

The success of many inventions depends on the manufacturer's ability to present them in simplified forms to the consumer. Economy of space often places adjustments in almost inaccessible places. New shapes of wrenches are required both in construction work and as part of the equipment furnished.

"**W. & B.**" **Diamond Trade Marked Wrenches** have a design to meet the need of every branch of industry, manufacturing, agricultural, railroad building, etc. We are in touch with the World's progress in inventions and processes and can fill your needs.

Get them from your nearest jobber or send order direct.

Stanley Tools

Stanley Concealed Ratchet Bit Braces

Note Particularly—The Cam Ring which governs the ratchet is in line with the bit—a great advantage in working.

The Ratchet mechanism is completely **protected**, so that it is always free from dirt, grit and moisture, and retains oil for a long time.

In the clutch mechanism, **five teeth** are in engagement when working as a Ratchet, as against **one tooth** in other forms of Ratchet Braces.

They are highly nickeled and have cocobolo Ball-bearing Heads and Cocobolo handles.

These Braces, together with many other varieties of Ratchet and Sleeve Braces, are now being made at our CANADIAN WORKS.

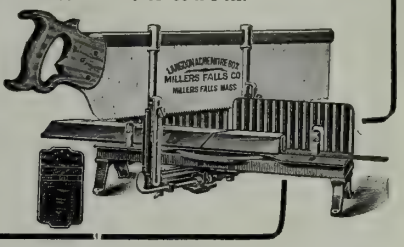
PERFECT MITRES
are always made with
THE LANGDON ACME MITRE BOX



When supplied with back saws fitted by ourselves, they are warranted to do perfect work.

QUICKLY ADJUSTED FOR ANY ANGLE.

Some of the advantages over older models are :—In longer guides, which hold the saw steadier. These guides are provided with elevators to hold the saw stationary, when desired, above the work. In a graduated arc showing the various angles commonly used. In supporting guides, to hold the work in place. In an appliance for quicker adjustment of extension lever. In a length gauge for duplicate lengths.

These boxes are made in three sizes, and put up with varying sizes of saws, ranging from 22 x 14 in. to 30 x 5 in.

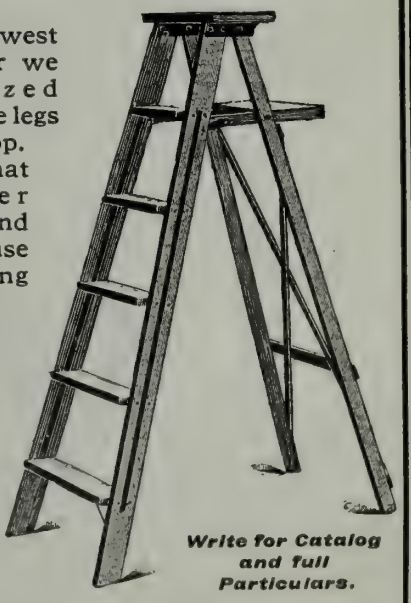
For Increased Business
Sell the



SHELF LOCK STEP LADDER

This is the lowest priced step ladder we make. Galvanized steel ears fasten the legs and risers to the top.

The lock that holds the ladder from opening and closing when in use is made by using strips of steel to form a hinge with the arms that support the shelf.

The shelf is always up when the ladder is closed and horizontal when in use. This is a very convenient and practical house ladder where short lengths are used and it is certain to appeal to the puplic.

Made regularly 4 to 10ft.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

MORE ECONOMICAL DELIVERY

That the motor truck will soon replace the horse and rig for commercial delivery purposes is the contention of a writer in MacLean's Magazine for April, who deals with "The Future of the Motor Truck." The trucks are now in general use in the larger centres of the United States and are rapidly growing in popularity in Canada. There is no question as to the better service which they provide; the only issue is as to the cost of operation. To merchants this is a vital problem. The facts, figures and conclusions which are presented in the article would seem to indicate that the motor truck will soon supersede the horse and rig.

GRAND RAPIDS

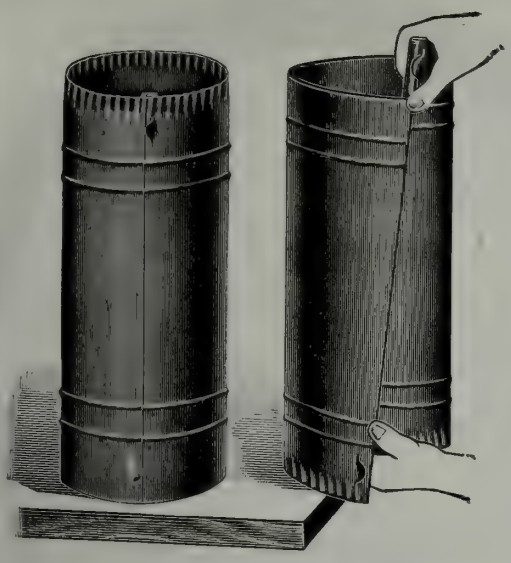
All-Steel Sash Pulleys

SAVE THEIR ENTIRE COST IN

Labor, Freight, Screws, &c.



GRAND RAPIDS are the original—the STANDARD goods. Nearly every jobber in Canada and United States carries them in stock.

Write for samples and descriptive catalogues

We make thirty-seven styles.

Largest Sash Pulley makers in the world.

GRAND RAPIDS HARDWARE CO.
100 Eleventh Street, GRAND RAPIDS, MICH., U.S.A.

"Scheip's Perfect" Patent Nestable Stove Pipe

The Best on Earth

Anybody can put it together. Hands are the only tools required. 6 in. and 7 in.

Requires no staples.
Locks easily and securely.
When put together is equal to riveted pipe.
Every length guaranteed to fit perfectly.
Oiled to prevent rusting.
Packed 25 lengths in a crate.

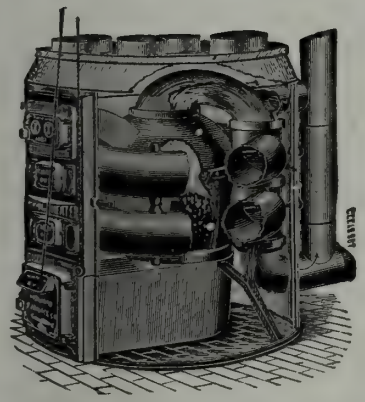
It is cheaper to buy "Scheip's Perfect" in crates than to make your own pipe, or pay the freight on riveted pipe.

The crating lessens your freight charges, and the pipe you get is "Perfect" —as its name implies.

When you are ready to stock up with stove pipe accessories, tell us.

We have everything you need—Elbows, Dampers, Half-lengths, Damper-lengths, Tees, Tapers, Thimbles, Plugs, Chimney Caps, Ridge Pipes, Side Roof Pipes, Stove Boards, etc., for all sizes from 3 inch. to 8 inch.

Our prices will be quoted on request—you will find them reasonable.



E. T. WRIGHT & CO. (H. G. WRIGHT) **HAMILTON, CANADA**

Agencies at Vancouver, Winnipeg and Toronto

IT'S QUALITY AND ADVANTAGES THAT MAKE

CANADIAN HOWARD DOUBLE RADIATOR FURNACES

THE CHOICE OF MOST BUILDERS

The "HOWARD" Furnace means an enormous economy in fuel to the user, as the heat and gases have to pass through two radiators, thereby greatly reducing the heat by the time it reaches the smoke pipe, which, in the ordinary furnace would go up the chimney.

We employ only the most skilled mechanics and use only the best materials in the manufacture of this furnace.

Mr. Dealer, if you want to handle a line that will prove completely satisfactory to your customers, and a money-maker for yourself, investigate the HOWARD. Remember it is absolutely guaranteed. Write us for particulars.

The C. NORSWORTHY CO., Ltd., St. Thomas, Ont.

No Dirt
Can Lodge
in the
"All-Metal"

It Stands to Reason

that an all-metal washboard made in one piece will outwear the old-fashioned wooden kind many times. Then if this is a fact, the all-metal washboard is the most economical. This feature alone is one that prompts the housewife to buy MEAKINS' SANITARY WASHBOARDS when the dealer shows her this modern production in the art of wash-board making. Meakins' Sanitary Washboards give no chance for dirt to lodge or metal to loosen to scratch the hands. The "All-metal" has won favor for its practicability, and sanitary construction. It will not rust or corrode. Send for particulars and prices.

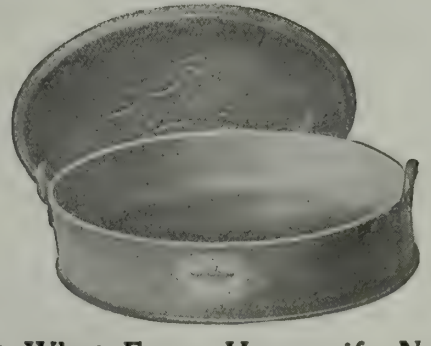
The LOOP-LOCK Rope Buckle TIE
Is The LATEST And BEST

It makes an adjustable and Sure-Lock tie rope. Can be fastened at any point along the rope, making a loop that cannot slip, give or loosen.

The Loop-Lock Buckle is made of malleable iron, cannot rust and will last a life-time. Only highest grade rope is used.

This is a tie that every farmer will buy. The price will appeal to him—the profit to you.

Stock small order. All jobbers handle them.



Write for full particulars at once.

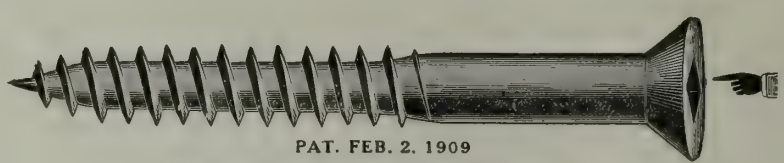
No Wasted Time When You Sell
ROSS RIFLES



So good is their reputation that all you need to do is to show your customer your samples of "Ross" Rifles, and if he really is in the market his choice is soon made.

By the way, many dealers have not yet any Ross .280 (High Velocity) Rifles. Don't forget that not only is this rifle absolutely the best sporting rifle made and the best rifle value offered, but moreover every sale means a tidy profit to YOU.

WRITE US FOR DISCOUNTS, ETC.

ROSS RIFLE CO. - QUEBEC

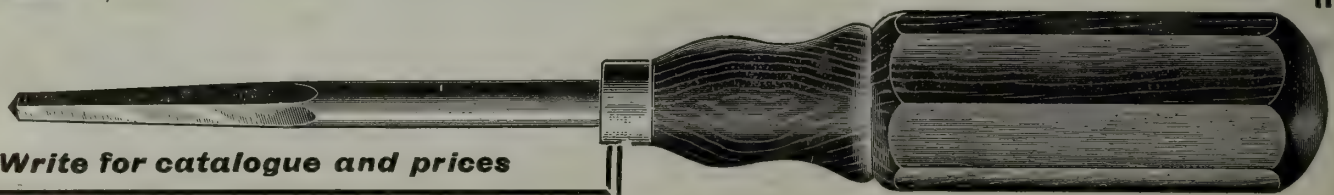
ROBERTSON
SOCKET HEAD
WOOD SCREWS



have a new and very important feature in the square hole. It is a feature that wood workers are quick to notice, as it not only preserves the screw, but also saves much of their valuable time, as it does away with all possibility of the screw driver slipping. It is certain to create a large demand in your vicinity after once introduced.

We also manufacture Hand Drivers, Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails, Wire and other high-grade products.

Sternauware Summer Specials

The Improved Sternau Holdfast Bulb.

Some of the Different Style
STERNAU BATH-SPRAYS

It looked for a long time as if the Sternau Holdfast Bulb was perfect, but we are never quite satisfied with our present performances, and we have bettered the famous Holdfast. The rubber top is now held in place with a metal ring, and if it split, break or be otherwise damaged, it can be quickly removed and a new one put on. If a rubber top be wanted with a larger or smaller hole than the one at first offered the customer, substitution can be made in a minute. Thus the dealer can have a sufficient stock of the rubber discs always on hand without carrying a spray for each one

The heavier the pressure of water, the more tightly is the rubber top held to the metal. In summer when Sternau Bathroom Fixtures are in constant use, the hardness and economy of the Improved Holdfast Bulb are sure of appreciation.

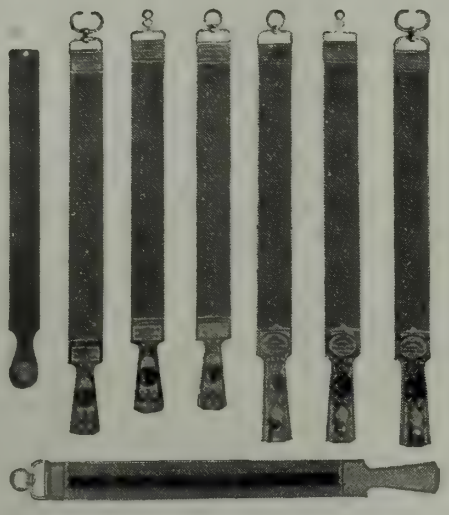
Big Ben Store Helps

In order to enable Canadian dealers to get the maximum benefit from the Big Ben campaign now running in Canadian magazines, we are packing Big Ben specially for Canadian trade, six in a carton with a full set of store selling helps (two posters, two show cards, two metal signs.)



On an order for 12 we add a solid mahogany display stand. On an order for 24 or more, we print your name on dials, give the posters, display stand, and a beautiful metal sign lithographed in five colors.

Big Ben and his selling helps are being carried in stock by 54 wholesale Canadian distributors. We will be glad to let you have their names upon request. Any will tell you Big Ben is the best made and the best selling alarm that's ever been put out.

In broken and dozen lots, $2.15 less 2%. In lots of 24, $2.05 less 2%.

The Western Clock Co., La Salle, Ill.

Here is a Carborundum Product that will Make the Sales Jump

The Carborundum Razor Strop

THE best strop for home or shop—made from the best of selected leather—soft, smooth, pliable. One of the big features of the Carborundum Strop is the Corrugated Sharpening Side—the corrugations and the texture of the leather are filled with the finest of Carborundum powder—this gives a sharpening side that is lightning fast. The finishing side is soft, smooth, velvet-like. The hardware and fitting of the strops are novel and practical—especially the split ring holder. Every strop is backed by the Carborundum guarantee.

Send for the Razor Strop Catalog and our Strop Display Case Offer

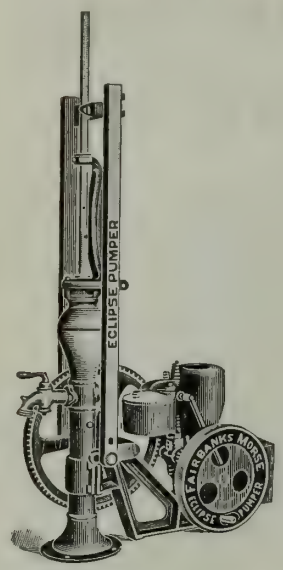
The Carborundum Company, Niagara Falls, N. Y.

THE LIGHTNING AND BLIZZARD

FREEZERS

stand ready to serve you in the same satisfactory manner in which they have served both trade and consumer for over a quarter of a century. The construction is of the same high class. They run easy, freeze quickly and take the smallest amount of ice and salt of any freezer made. The extensive advertising from season to season has created a permanent demand. They bring trade and help you keep it.



Better let your Jobber quote at once.

NORTH BROS. MFG. CO.

Philadelphia, Pa.

More Water for Less Money

¶ Would you pump water from a deep well for two cents per hour? That's what the "ECLIPSE PUMPER" does right along. Neither does its usefulness end there. The engine is easily disconnected from the pump and is all ready to turn the cream separator, run your grindstone or grind your feed, etc. The "ECLIPSE PUMPER" is a practical, guaranteed "Fairbanks-Morse Engine."

Every hardware dealer should carry them; and a letter to our nearest branch will bring you our catalogs and our special terms to agents.

Grasp the Point,

for "there's a reason" why this nail is attracting so much attention throughout Canada and the U.S.

Merit Alone

has caused an unusual and insistent demand by Dealers, Roofers and Owners for the

SIMPLEX

Large Head One-Piece

Roofing Nail

Stop to think—here is a nail with a head **four times as large** as the ordinary roofing nail—and that isn't all—it's **made in one piece,** has **thick** rust resisting head and a small barbed stem.

The Head Area

gives a large bearing surface on the roof and prevents roofing tearing out under wind strain.

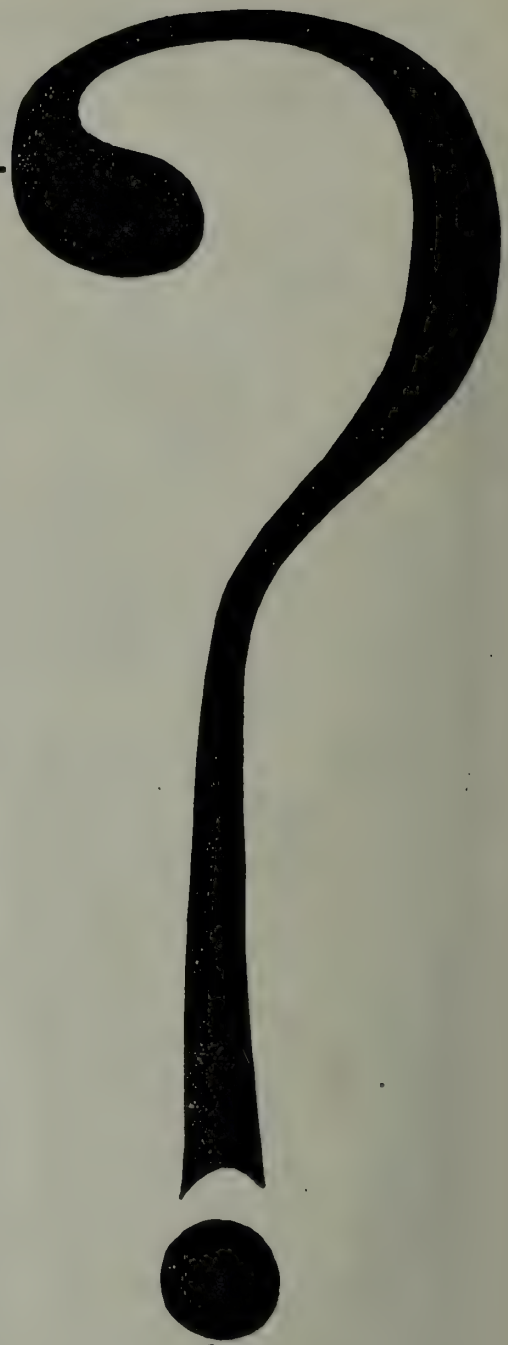
The One-Piece Head and Stem

prevent leaking and rusting where nail goes through the cap—**the nail and cap are welded into one piece.** No time lost—to say nothing of the inconvenience—in handling separate nails and caps.

The Cupped Shaped Head

gives a head bearing equal to its full diameter.

The Small Barbed Stem



insures greatest holding power and doesn't split the roof boards.

Head 1 inch diameter, 21 gauge thick ; Stem 1 inch long, 15 gauge diameter.

LEWIS BROS. LIMITED, MONTREAL

AGENTS

OTTAWA TORONTO VANCOUVER

CAN WE HELP YOU

There are some hardware dealers living in this 20th Century who are still using 19th Century methods. They do not realize that Halifax is closer to Vancouver to-day than Montreal was to Toronto fifty years ago.

Twenty-five years ago it was a calamity for a merchant to lose a good clerk, for he knew it was practically impossible for him to get in touch with an experienced man. Such an idea as making a deal with a fellow hardware man a couple of hundred miles away either to buy a set of tinners' tools or to sell a second-hand counter or show case, did not seem practicable to even the most progressive hardware men. If a man wanted to sell his business he had to accept the highest price he could get from some one of his fellow townsmen, for no one else knew of the opportunity or had any means of finding out about it.

To-day the up-to-date dealer

CREATES HIS OPPORTUNITIES

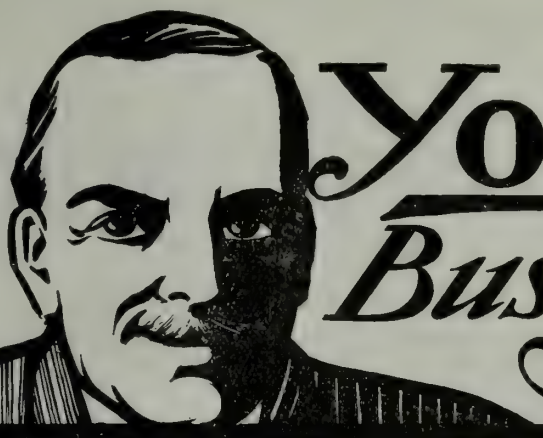
He states his wants briefly in a "Hardware and Metal want ad." and in four days' time practically every hardware merchant, clerk, hardware manafacturer and traveler has read the proposition, and it seems reasonable that somewhere among the "blue noses" of the Maritimes or the pioneers of the boundless West someone will want just what he has to offer.

EVERY HARDWARE MERCHANT IN CANADA

can take advantage of our "want ad." page. Ask yourself:

Is there not some article I would be better without if I could get a fair price for it? If you cannot get a fair price for it by appealing to the trade throughout Canada you had better sell it for scrap

We can help you, but you must take the first step.



Surely it is worth 25c or 50c to find the one man in Canada whose wants dovetail into just what you have to offer.

RATES: *(payable in advance)* **2c per word first insertion. 1c per word subsequent insertions. Box Number, 5c additional each insertion.**

HARDWARE & METAL

Montreal **Toronto** **Winnipeg**

They'll Build YOUR Business

Here's Prestige and Profit for Your Store

And—in addition a bang-up trade for the summer months

¶ There's need for a good oil lamp in every home. Not only in the summer time veranda life but all through the year as well. For no one **should** depend entirely on gas or electricity. Yet most people do.

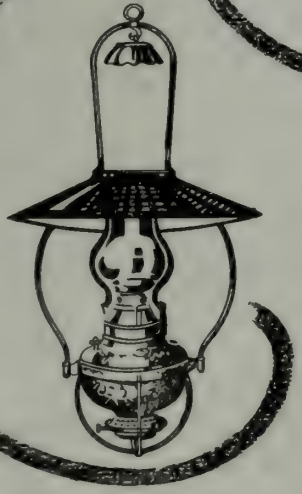
¶ Be the first to point out the need to **your** customers. Don't wait for a competitor to create the demand. Do it yourself and get the cream.

Success Lamps—the best Oil Lamps made

¶ They are solid metal, with a center draft. Heavily nickel-plated—highly polished—ornamental—substantial—easily wicked—easily cleaned. And they give an intense, pure white light. Just the lamp to bring customers into your store because it's just the lamp for their homes.

¶ Feature it this summer. Show folks that they need it—they'll buy it fast enough.

You Can Cash This Word—



PILABRASGO

¶ Simply a contraction of our firm name. But it's going to be famous. Tie to it—here's what it means—

¶ Snappy—clean-cut—fast moving—oil, gas and electric goods. Designed by masters—made by skilled workmen—and shot into your store while they're spick, span, brand new.

The Pilabrasgo Line—Sellers from the drop of the hat

Some Seller

¶ This lamp has made money for every man that ever handled it. And it will make money for **you.**

It's The Pittsburgh Mammoth

The Best Known Store Lamp on the Market

¶ You can get more for it than for any other Mammoth Lamp simply because it's **worth** more. And you'll sell it **faster** because it's known and called for.

¶ Listen: It's big, handsome, convenient, easily handled, easily managed—briefly, **everything** a store lamp ought to be. But that's not all.

¶ It holds more oil, burns longer and gives more light than any store lamp you ever saw. And it has an indicator showing the exact quantity of oil in the fount at **all times** which makes it absolutely safe.

¶ It's as staple in your store as sugar in a grocery. You can find no more profitable lamp.

¶ These two lamps are merely samples of our immense line. It's the most profitable one on the road and it's one you ought to see. Believe us, Mr. Merchant, it will bring business to **your** store. Shall we send a man with photographs? A postal to our branch will bring him.

Plymouth Cordage Co.
ESTABLISHED 1824

North Plymouth, Mass. July 6th 1912.

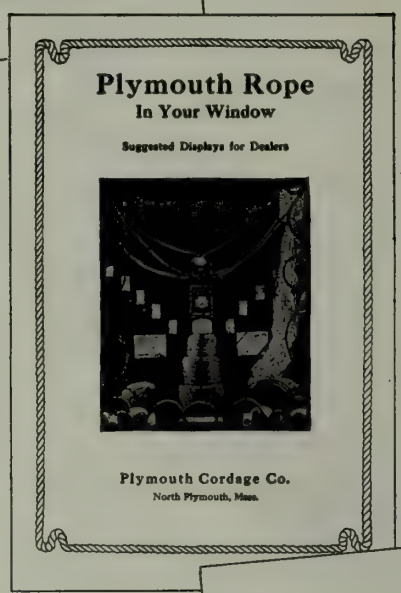
SUBJECT: FREE ADVERTISING SERVICE.

H. Godfrey & Son,
Jonesville, Mich.

Gentlemen:

We are glad to send you, as requested, the Plymouth advertising material consisting of a bank of Manila hemp, various display cards and a quantity of illustrated booklets.

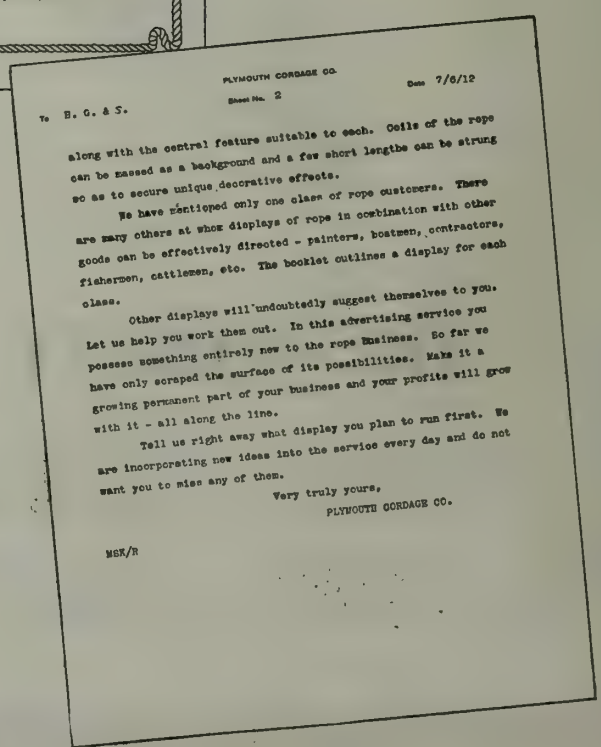
To help you in putting the display material to the most effective use we are sending you also the illustrated booklet "Plymouth Rope In Your Window." It contains numerous suggestions for the planning and arranging of window displays and outlines sixteen different displays of rope and other goods. We plan to send you outlines of additional displays from time to time.



You will do well to run several displays for the farmers, who you say constitute a good percentage of your rope customers. The hay carrier, wire-stretcher and stump-puller are excellent for central features because their actual manner of working can be easily shown in the window.

The sale of your pitch forks, rakes, fence wire, spades, sledge hammers, axes and saws can be stimulated by displaying them

We Show You How



Set the Plymouth free advertising service at work in your store —it builds trade.

No great demand on your time. You can install a Plymouth window the day you receive the display material — our booklet shows you how.

Our letters will help you to work out questions peculiar to your store and community. Our bulletins will give you plans used by other stores.

Plymouth dealers can secure this service now by request—others as soon as they stock the rope. Write for full information.

PLYMOUTH CORDAGE CO.

Sheet No. 2

Date 7/6/12

To H. G. & S.

along with the central feature suitable to each. Coils of the rope can be massed as a background and a few short lengths can be strung so as to secure unique decorative effects.

We have mentioned only one class of rope customers. There are many others at whom displays of rope in combination with other goods can be effectively directed - painters, boatmen, contractors, fishermen, cattlemen, etc. The booklet outlines a display for each class.

Other displays will undoubtedly suggest themselves to you. Let us help you work them out. In this advertising service you possess something entirely new to the rope business. So far we have only scraped the surface of its possibilities. Make it a growing permanent part of your business and your profits will grow with it - all along the line.

Tell us right away what display you plan to run first. We are incorporating new ideas into the service every day and do not want you to miss any of them.

Very truly yours,

Shaft-drive for mechanics and farmers—foot and engine power. No. 273.

LUTHER

Dimo-Grit

TOOL GRINDERS

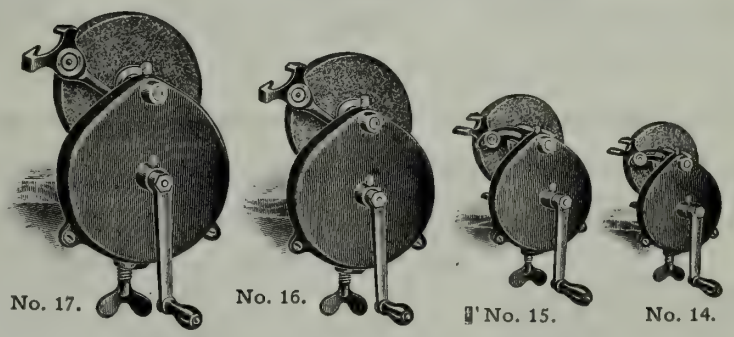
The Luther Line includes 32 types of grinders to meet every tool sharpening need for mechanics, farmers, ranchers, machinists, carpenters and every class of tool-users. Every grinder is scientifically designed, strongly built and fully protected by patents.

25 Times Faster Than Grindstones

Dimo-Grit, the new artificial diamond abrasive, best for steel, cuts hardest steel as emery cuts copper. It peels steel away in tiny shavings instead of wearing it away like emery or the grindstone. 25 times faster than the grindstone, 10 times more efficient than emery. No need of cooling with water—no danger of drawing temper.

Shaft Drive Grinders for Farmers and Mechanics.

The Luther shaft-drive grinder is built entirely of steel and iron, with shaft drive in dust-proof housing. It sells in 4 outfits, including one for farmers and one for mechanics. The farmers' outfit includes disc and sickle grinding attachments, and other tool rests for all grinding of farm tools. The mechanics' outfit includes plane-bit and twist drill sharpening attachments, and provides for every sharpening and polishing need. Extra attachments transfer this grinder into jig and circle saws, drill, forge, lathe, milk tester, etc.



Good Profits for Dealers.

The fast-cutting Dimo-Grit wheels, the superior design and construction of Luther grinders enable dealers to make quick sales. Profits are good, and we give price protection. Write for full information about complete line.

The New Preston O. G. Square Bead Eavestroughing

We have always claimed that our eavestroughing was the best on the market, but we have gone ahead and gotten out something that is far superior to our old make. Now we can claim that we can't be beat when it comes to our eavestrough.

Some time ago we advised all the trade that we were manufacturing O. G. Square Bead eavestroughing by machinery which assured absolute uniformity in shape, but it developed that our machinery was not heavy enough to produce as sharp a bead as we desired. We have now perfected and patented automatic steel dies to fit our large power press and we now guarantee a trough superior in shape, appearance and fit to any other on the market.

You can save time and solder in the erection of this eavetrough FOR EVERY PIECE IS EXACTLY THE SAME and fits snug and tight. There are more profits for you and more satisfaction if you use our make. See our special offer below and take advantage of it at once.

Cut out this ad. and mail it to us to-day with your order for 250 feet of our new O. G. S. B. Eavestrough and if it is not exactly as we represent it we will make you a present of it. This offer is good for thirty days.

Quality in Cutlery

In No Other Line of Goods is Quality so Hard to Detect Without an Actual Test As in Cutlery

Boker's "Tree Brand" Has Stood the Test

You could obtain inferior cutlery which would, to all outward appearances, resemble "Tree" Brand and you could sell these inferior goods at fully one-third the prices asked for "Tree" Brand, but for actual use and practical value would not in any way resemble the "Tree" Brand line. The quality in cutlery is hidden to the average purchaser, as the value and cost lie in the material, tempering and grinding more than in the style and finish. Insist on having Boker's "Tree" Brand Cutlery if you wish to work up a profitable and a high-class cutlery trade.

Value of Tinshop Taught by Test

Earnings of the Department Much More Than Meet the Full Expenses of Doing Business. In this One Case at Least the Operation of a Tin Shop and Hardware Store Together Has Proved Beneficial to Both — Tweed Tin Shop Proves Its Worth.

Written for Hardware and Metal by C. F. Fawcett, Tweed.

HEARING other hardwaremen questioning the advisability of operating a tinshop in connection with a hardware store, and reading opinions of others which indicated that they too doubted whether a tinshop brought real profit to a hardware man, I became interested in the problem. I had been operating a tinshop, as well as a hardware store, and had been satisfied that both were yielding me a fair profit, but those opinions of others made me anxious to hvae more accurate knowledge. As a result, I started, in February, a test of the tinshop. I have been watching the results now for six months, and can say, unhesitatingly, that our tinshop pays. Perhaps a tinshop might not pay others—doing business under different circumstances—but it pays us here in Tweed.

Made Proper Changes.

Before we started the test—or rather as a preliminary step—we took stock of all the goods in the tinshop. These were charged against it, as were the tools and plant generally. A rent was charged for the building—such a rent as we would have had to pay had we been getting it from an outsider. The insurance on the building was also charged against the tinshop. The books for the tinshop and the hardware store were to be kept separately, and we wanted to have assets and liabilities clearly defined at the start.

As the test has run along there have been a number of other charges entered against the tinshop. The wages of the men working there are, of course, a debt on it. New tools, bought from time to time, are also charged against it; as is all material bought.

Careful Account Kept.

But while these charges make it necessary that the tinshop should do a good volume of business at a good margin of profit, in order to pay us any net profit, the results have shown that this required volume and this required margin of profit have been reached. Careful account of every bit of work turned out by the tinshop has been kept, and there is no doubt we have been the gainers. The tinshop has meant money for us.

Our foreman has entered into the spirit of the test. He has made memoranda of every job undertaken, and has noted the material used. The time devoted to the work is put down; the amount received for the work is entered. Figures enough are here, then, to determine the profit on each job. Interest and rent are made monthly charges; so, taking into consideration the profits on the various jobs, and the overhead expenses which must be met, we can easily determine what our net month's profit has been. There has not been a single month that the tinshop has not paid us handsomely.

Each Helps the Other.

I can not personally see any strength in the argument that a tinshop and a hardware store can not be run success-

A view of the interior of the store of the Fawcett Hardware Co.

fully by the same man. In a place where there was a great deal of competition, this might not be successful, but we have found that the two work finely together. It is hard to prove this, but I am confident that both our tinshop and our hardware store pay us better than either of them would were we operating that one alone. In other words, I believe the tinshop helps the hardware store, and that the hardware store helped the tinshop.

We have done a good deal of contract work lately, agreeing to furnish a house with all hardware required, and to do the tin work, eave-troughing, furnace work, etc. Without the tinshop we would be unable to get such contracts, and there would be a good chance that we would not get the order for the builder's hardware.

Did Not Help Sale of Paint.

I had thought, when I commenced this test, that the tinshop would help the sale

C. F. FAWCETT.

of paint. That may be so, but we have not been able to trace any close relation between business in these too departments. That is a little disappointing, but on the other hand the tinshop has helped the sale of iron pumps, lead and iron pipe, milk cans, pails, and similar articles.

In similar ways, the hardware store has aided the tinshop. People have come for some tin goods. We have shown these and have said that they were made in our own tinshop. That paves the way, and the customers often ask what we would charge to do a certain bit of work. Several jobs have been secured in just such a manner.

One thing is somewhat difficult in running the two stores—that is to keep the accounts absolutely separate. So often they seem to overlap. For instance in contract work, where eave-troughing, roofing and furnace work are being done, and builder's hardware installed, the estimate will be given in a lump. But the accounts must be kept separate in our books, for a part of the sum received must be credited to the hardware department, in payment for the builder's hardware, and the rest must go to the tinshop.

After all, though, this is not so very difficult, for in making up the estimate we naturally figure, "the roofing will be so much, the eave-troughing so much, the builder's hardware so much." We can, therefore, easily divide the amount received as payment in the same way.

Inter-department Buying.

A more difficult problem we found—that of charging against the tinshop articles received from the hardware store, and vice versa. I am not certain that we adopted the perfect method of doing this, but it seemed best to us. What the tinshop got from the hardware store it was paid for, buit was paid only the cost price. On the other hand, what the hardware store got from the tinshop it paid for only at cost price.

There has been considerable exchange of goods between these two departments, which we have endeavored to keep entirely separate as far as bookkeeping goes. I think the transactions have been about even, and therefore neither unit has profited disproportionately by reason of the cost buying. Perhaps the hardware store has had a little the best of it, as it has used a larger number of milk cans and pails turned out by the tinshop. But however this may be, the tinshop has proved its worth. It is a money-maker and a business-bringer. It has not harmed our hardware business, but has only helped it.

The test we have made has been successful in every way. I think, though, it has now outgrown the proportions of the test. I believe running the departments separately, as we have done recently, is the proper way. It enables constant account being kept of the tinshop. We intend to continue this system.

The Elimination of the Wooden Counter

It was useful At One Time As the Convenient Receptacle for the Demijohn—Now it Keeps Salesman and Customer Apart —It is Particularly Out of Place in the Paint Department.

Written for Hardware and Metal by H. E. Milhell, of the Imperial Varnish and Color Co., Toronto.

The old wooden counter has been for a long time an actual hindrance in modern retailing. In its day it served a good purpose when the merchant sold what he claimed to sell over the counter to the parson, and brought out the rum and whiskey from the cavernous opaque space underneath for the deacon. But that thing has passed Merchants are no longer hiding something on the quiet. They are selling quality goods that they need not be ashamed of, and which they want everybody to see. Lots of them would like to have everything up front. Some brilliant chap is going to come along some day and turn the retail store lay-out hind side before. Instead of 25 feet front and 100 feet back, he will have a 100 feet front and 25 feet back, and he will get away with it too. His whole store would be turned into one huge silent salesman.

However, returning to the turning out of the old wooden counter. I have so often felt that when I went into a store and the owner or his clerks clambered round behind and spread eagled their hands out before us, that at once that heavy, clumsy old counter set up a barrier to the intimacy I wished to have with the man from whom I intended to buy.

When a man wants to buy and buy right, he wants to feel towards the salesman that he has a friend who is on even footing with him, and who will advise him right in his purchase.

Take, for instance, buying paint over the old wooden counter. There you as customer, are on the outside looking in, the salesman is on the inside looking out, both glaring at each other with your can of paint looking like a bone of contention between you. Take the counter away as has been done in some cases, you and the salesman and the stock stand intimately in a nice, little, conversational, social triangle, everybody on the same footing, no barriers, as a customer you have every opportunity to promote the greatest intimacy not only with the salesman, but with the goods you intend to buy.

Now the salesman, realizing the importance of promoting such associations with his customer, and his customer with his stock, can hold him in such a manner that he is made to feel he must buy

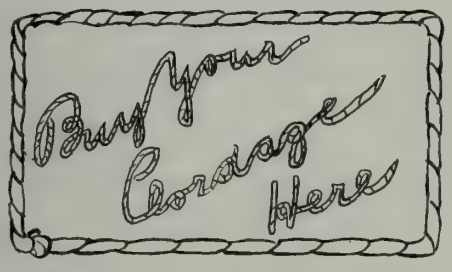
(Concluded on page 50.)

Working Up a Big Business in Cordage

Dealers Should Endeavor to Feature Their Stock at This Time and Improve the Opportunities of Trade—Some Suggestions for Window Displays—Get "Out of the Rut" in handling this profitable Line.

These are busy days on the farm. The farmer works longer than the sun, for he is up before the solar luminary rises, and does not stop until old Sol has hidden himself again behind the horizon. He has his crops to tend, his marketing to do and his preparations to make for the rapidly approaching harvest.

With such activity in the farming sections, it follows that the demand for rope and binder twine is very heavy. There has been a good sale to date, but the trade is only nicely started. When the binder and the thresher get to work, the real consumption of binder twine will start and the hardwareman will find it difficult to supply the demands of his country customers. He will have daily, hourly calls for cordage.



The hardwareman can reasonably expect that a certain amount of trade will come his way, whether he does anything to encourage it or not. A great many of them, unfortunately, accept this as sufficient and depend on their stock "selling itself." It is quite possible to walk into stores at the present time—or at any time during the harvest season—and not see any evidence of binder twine. If you ask for it, the salesman goes out to the storeroom for it or reaches down under the counter. There is a good stock of cordage around somewhere. Of that you cannot rest assured, but there is no visible evidence of it.

The head of a certain very well known concern which manufactures a line of goods used in every household and which advertises very extensively, was once asked the reason for the publicity propaganda of his firm. "Every person has to buy your goods anyway," it was pointed out "why go to all this trouble and expense?" "Every person would buy our goods anyway," affirmed the head of the company, "but we want them to buy MORE of our goods. We are developing the possibilities of trade in our line."

The position of the hardware dealer to his rope and cordage stock is similar to that of this concern. Every farmer has to buy cordage anyway, but the dealer should try to sell him more cordage, to develop the possibilities of trade.

It is advisable, in the first place, to keep the stock where it can be seen. This will be found valuable, if only as a reminder. The farmer will not forget that he needs a new supply of twine if he sees it as soon as he enters the store. Keep all your available supply in cavernous depths under some back counter and he may go away without remembering that he needed twine. He may not be able to run back to town, almost certainly will not, and he will be compelled to get a supply of twine elsewhere, from the country store, or from a neighbor perhaps. Wherever he gets it, the transaction will be lost to you, Mr. Dealer.

A good many dealers have been inclined to list cordage among the lines which they carry, but do not need to bother about. Not all dealers have taken this view, of course. Some have always made it a point to give a certain amount of attention to this trade; but it is doubtful if even these enlightened retailers have realized to the fullest what can be done. The writer has come across a number of window displays devoted to binder twine within the last few days, but is compelled to confess that they were all of a hackneyed pattern. A pile of bundles or balls of twine, generally in the form of a pyramid, forms the "piece de resistance" of the average display. It is not the writer's aim to disparage the work of the window trimmer in this department. These displays are undoubtedly of much value. But why not, for once, get out of the rut and try something original, something which will catch every eye? It is not only possible, but easy.

A method of utilizing cordage for use in arranging window Displays.

Here is one idea, for instance. Cover a board about two feet by five (or larger if the window permits) with felt, crepe paper or some similar material, and place the board in the centre of the window. Tack a length of rope or twine around the edge to make border. Then tack another length inside, in the form of letters, spelling out certain words, such as "Buy your Cordage here," as in the accompanying example. Arrange the rest of the window in any way that best suits the space at disposal.

The idea is simple and can be carried out without a great deal of work or trouble. It would, nevertheless, lend an original note to the display and attract attention.

Show the Strength.

The one talking point that the salesman has in handling cordage is quality. He talks the strength and durability of his goods. Now a window display is supposed to "talk" to passersby; to tell in the most emphatic manner the good qualities of the articles shown. When you are dressing a window with binder twine, try to make your display tell the public something about the strength of your twine.

This is not as hard as it may seem. Select a weight which a single strand of the twine will bear. Then place a bundle of twine in the centre of the window, detach the end and run it through a ring suspended from the ceiling. Attach the weight to the end of the twine. A showcard announcing that "Every strand of————cordage has strength equal to this," would call attention to the practical demonstration thus supplied.

If this idea were carried out, it would be well to replace the twine in use every night or at more regular intervals, for even the best will break under a continual strain.

Toured the District.

A southern Ontario hardware dealer adopted the idea two years ago of sending a member of his staff out once or twice a week to drive through the nearby farming sections. Days when business in the store seemed a little slack would be selected. The rig would be loaded with rope and twine, and the clerk would call on all the farmers in the part that he visited. He would always make a number of sales, for some of the farmers would be out of cordage and would be pleased at the opportunity to secure more without hitching up and driving into town. He generally managed to sell out his supply, in fact, and this more than paid the expenses of the trip.

The chief advantage of this lay in the fact, however, that when these customers did come to the city, they would seek out the store of this dealer. Also the canvasser found out other wants of the men he called upon and this led to sales.

The days of big business in cordage are now at hand. Why not endeavor to make the most of the trade?

BUSINESS PROSPECTS GOOD.

The business outlook is good. Although the present year was started with an abundance of confidence on all sides, certain conditions have arisen since to cause men to consider the situation again to see if they were really justified in their early optimism. The fact that the prosperity predicted in the United States has not been realized to the fullest extent, due probably to the elections, would affect trade conditions here, it was feared. In addition, the weather has not been uniformly favorable. As a final reason, rumors of impending depression have been heard, the prophets varying in their estimates of the date of the likely arrival from 1914 to 1917.

For these reasons, men have been inclined not to take so much for granted the presence of prosperity but rather to look for proofs. They have had no difficulty in finding the proofs. Trade was never better, all lines sharing in the activity. Building operations are on a more extensive scale than ever before, crops promise to be fairly good, and big business is being done in all lines. If present conditions are any criterion, the fall will see a remarkable stimulation in buying. All that is needed to insure the swing of the pendulum to the farthest limit on the side of prosperity is a good crop in the West.

Tangible proofs of the healthy state of trade are provided by the reports of wholesalers. It is stated that the amount of business done during the month of June was largely in excess of records for past years. Bank clearings in Winnipeg for June equalled $117,104,297, as compared with $86,401,007 in June, 1911, and $69,889,227 in the corresponding month of 1910. These figures are significant. They tell the story of a great development in national business.

It is now practically certain that Canadian trade has reached the stage where it refuses to be affected by the ups and downs of our American cousins. A strike in an iron foundry, a run on a bank, a report of crop failure in some Western point, and an assault on stocks on Wall Street may depress conditions on the other side of the line, but the result finds no reflection in this country.

NEARING THE EIGHT CENT MARK.

It is perhaps poor consolation to think that one has only one's self to blame for any reverse. Yet this thought may have a chastening effect which will work for ultimate good.

Certainly dealers have only themselves to blame if they have been caught by the recent advance in white lead, made Friday of last week. That this advance was coming was predicted for weeks. When white lead was selling at $7.00, it was prophesied that there would be a large advance, and that 8c lead might be considered a possibility. Advance after advance has come, and now, owing to this latest rise of 25c, the product is being marketed in Montreal at $7.65—some brands considerably higher.

Those dealers who contracted for their supply when the advance became certain are the gainers now. The manufacturers will fulfill their obligations. Those who paid no attention to the predictions—thinking that the market must fall, rather than rise—must pay the price of their carelessness.

This most recent advance is due to the old cause—a considerable rise in the cost of pig lead. To protect themselves the manufacturers had to make the advance, They will fill their old contracts at the old figures, but new agreements must be made on the new basis.

This is a case where the wideawake dealer is reaping his profits. It may be that there is never a time when it is too late to mend, but there does come a time which is too late to buy to real advantage.

THE VALUE OF A TEST.

"I wonder if the tinshop does pay me," said Mr. Fawcett, of Tweed, to himself, having heard many of his fellow hardwaremen declare that such a branch was not in the best interests of a hardware business. "I'll find out," he answered himself; and immediately started a test of the tinshop, details of which Mr. Fawcett gives elsewhere in this issue.

Such a step as this might well be adopted by other hardwaremen. Mr. Fawcett isolated the tinshop, as it were—making it stand on its own footing, and show results. Had the department proved a money loser instead of a money maker and business bringer, Mr. Fawcett would certainly have taken some speedy action. He would have investigated his methods, to find if the fault lay there. If this were not the case, he would have closed the tinshop.

Other lines would lend themselves almost equally well to such a test. Is there in your store a class of goods which causes you to wonder whether it pays you or not? Why not put it to the test? Charge against it a fair share of the rent. Charge against it a part of the insurance. Charge against it a portion of the clerking expenses. Then see if the sales yield a profit which covers these charges, and if they leave something over for profit.

The test cannot properly be made in any short period. There must be time given for the fluctuations of business to work out fairly. One month might be a bad one for the line being tested—but in six months the average will be about correct.

If, after a thorough test, the dealer should find that this particular class of goods was failing to yield him a proper return—or perhaps any return at all—he would then be face to face with a problem—a problem which would need speedy settlement. Would he continue to carry that line?

In facing such a problem, a dealer would need to bear in mind several things. He cannot afford to carry only those lines which yield him a good profit. For some reason which is hard to explain, nails are now cut so low that they yield the retailer a profit which shows only as a decimal point. But could the hardwareman refuse to handle nails? Most assuredly he could not. If he could not supply his customers with these, he would not have a chance to supply them with other lines.

There are similar lines—goods which must be carried even if they do yield little or no net profit. The dealer

would therefore have to determine if the class of goods which he had tested and found wanting belonged to this indispensable class. If so, he would have to continue to carry them—but he might well put them in a less prominent place. Let them remain near the back, where space is not so valuable, but where they could be quickly found when wanted. There is not a great deal of use pushing a line which does not bring real profit. Anyway, these staple articles do not need as much pushing as some others. People who need them buy them.

But if the tested article is not a necessity—then, it being a money loser, or at any rate not a money maker, should be discarded. The room accorded it should be given over to profit-bringers . There is but little use for drones in an up-to-date hardware store. A few tests to determine the drones would be a great thing. The tests would have to be individual, for no two men's business are alike. What proved a money-loser for one dealer might be a profit-bringer for another.

POINTED EDITORIALS.

Plumbing goods are about to rise. The early buyer will get the plum.

* * *

Just at present white lead and mercury seem to have a great deal in common.

* * *

The electric fan is the most popular article on sale in the hardware store nowadays.

* * *

The most popular resort these days is the bath. Anything pertaining to the bathroom, therefore, is appropriate in the window.

* * *

In this practical age, idle theories go by the board. The test or demonstration is the thing. Proof is wanted, not mere surmises.

* * *

From the manner of quite a few hardwaremen we know, they must have become affiliated recently with the Hookworms of the World.

* * *

The problem of distribution does not worry the trade in Canada to any extent. The problem here is to get the goods to supply the demand.

* * *

The fly isn't the only thing that should be swatted. How about that pesky "lazy germ" which starts to make itself felt as soon as the mercury crawls up any height?

* * *

To talk of coal stoves when the thermometer is at 90 in the shade and the humidity at 1000 everywhere, may seem out of place. But, nevertheless, isn't it time you were planning your fall campaign, Mr. Dealer?

* * *

Warm weather has one advantage. It stimulates demand in some lines that the hardware dealer carries. Still, some heavyweight members of the trade would rather not have the business at the price of so much bodily discomfort.

* * *

Spray, brothers, spray,
The bugs grow fast;

The poem of a well known Canadian hardwareman which begins thus, comes to mind. It certainly is time to get the sprayer at work. The plague of bugs has begun.

Distribution Problem

The biggest question facing the hardware trade in the United States at the present time is the problem of distribution. Conditions are beginning to show congestion there. The expansion of industry has brought about a mushroom growth of manufacturers and jobbers. Every section of the country is covered, and re-covered by salesmen traveling for hardware firms. A huge dragnet has been spread. It is said that in some sections retailers have the representatives of from 10 to 14 jobbing firms calling upon them every week!

This condition of affairs is far from satisfactory from any standpoint. In the first place, the retailer loses too much time listening to traveling men. He is hunted from pillar to post. When a man enters the store, the dealer does not know whether to go forward with a glad smile to greet a customer or to make a hasty exit out the rear.

In the second place—and this is where the rub comes—there is too much overlapping as a result of this strenuous and multifold competition. More money is spent before the goods reach the retailer than would be the case if the overlapping could be eliminated. As a further disturbing element, the catalogue houses are very active, and bitter complaint is frequently made that there is discrimination in their favor.

The old system of distribution was, briefly: Manufacturer to jobber, jobber to retailer, retailer to consumer. This is the logical, the quickest and most economical method of marketing goods. It has become not uncommon over there, however, for some manufacturers to sell direct to the trade and to the consumer, for jobbers to go into the retail business, and for retailers to do a little jobbing.

Out of the somewhat chaotic conditions thus created has arisen an insistent demand for improvement in the system of distribution. Some have openly contended that the jobber should be eliminated, paving the way to direct relations between manufacturer and retailer, and cutting off the middle profit. There has been talk of the formation of buying syndicates among retailers; in other words, for a certain number of dealers to form themselves into a body and buy from manufacturers in bulk, as the jobber does. This suggestion has not yet, as far as we know, been put to the test. As for the jobber, it is conceded on sane consideration, that he is still a very necessary part of the commercial fabric.

The latest suggestion has been advanced by the jobbers. It is nothing more or less than a combination of the hardware jobbing interests in the country. If carried out, this plan would mean that the trade of the country would be divided up into geographical zones, and each firm would be limited to a certain territory. The number of jobbing houses would be materially reduced and, instead of having the representatives of fourteen houses calling upon him, the dealer would have one—or two or three at the most. It follows that the cost of marketing the goods would be smaller and the prices might (this is conjectural, of course) be reduced. It is pointed out that, if reductions could be brought about by this means, the dealers would be in a better position to face the competition of the catalogue houses.

The hardware trade has been stirred up over this problem as never before. The trade newspapers have taken it up, and have fought out divergent theories and conclusions with militant aggressiveness. Passages at arms have lent spice and variety to association conventions. And, as nothing tangible has yet been done, it is safe to assume that this is but the beginning.

Concentrate on the Display Background

Some Practical Advice From a WindowTrimmer of Long Experience—The First Impression of a Display is GainedFrom the Background—Make it a Good One—The Value of Colors and Fix-tures—Cleanliness a Great Asset.

Written for Hardware and Metal by C. H. Smith, Ashdown Hardware Co., Calgary.

"The play's the thing," according to Shakespeare. In window dressing, "the background's the thing." The success of a trim depends largely on the kind of background provided.

The winter has found that the decoration of hardware windows is no easy task. Careful thought must be given. It is not desirable for a trimmer to undertake a display without first giving it due and ample consideration and planning how he is going to make it sufficiently attractive. Sometimes a good window will be arranged off hand, but there are exceptions to every rule. These exceptions are few and far between.

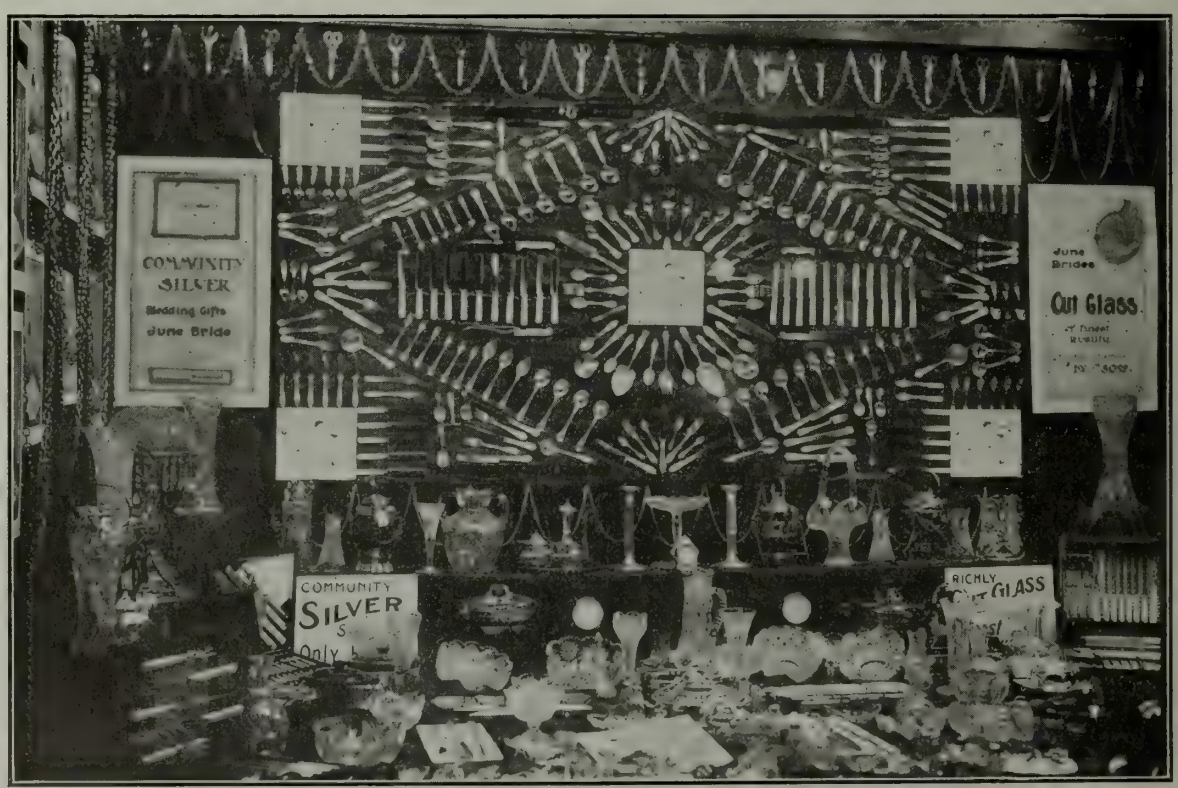
The object of window displays is to attract the attention of the passerby and draw him closer to examine the window more closely. To obtain this result it is necessary above all other considerations to have an attractive background. The background gives the just impression and it will either attract or repel the passerby.

Mr. Smith was formerly with D. W. Douglas, of Campbellford, and has in past years won a deserved reputation as a window trimmer. He has often won prizes in Hardware and Metal contests.

A great many practical hints are given in the accompanying article.

Gives Long Time.

Our store windows have cased-in backs and I certainly think that by far the best results are obtained from windows constructed in this way. When arranging a trim, I spend the greater part of my time on the background and have found that it brings results.



Points to be Considered.

One of the just things to be considered in arranging the background is to devise a good color scheme. Bare walls have a cold and dismal effect. About the best material to use is sateen, which is inexpensive and can be secured in a variety of colors. Two colors at least should be used in a display; sometimes three or four can be worked in to advantage.

In making background for cutlery and tool displays, I use millboard, which can be procured in sheets of various sizes. These sheets I cover with cloth and trim in the store. When making the display, the boards can be carried out and set in place. This system has been found very useful. It enables the trimmer to get ready ahead of time and to utilize his spare moments. The boards can be prepared on the floor above the store or in some part where it will not be seen or be in the road.

Once a Month.

I desire to remark in passing that cutlery makes the most attractive display possible, and also the best paying. In our store, the cutlery department is considered one of the most important, and I make it a rule to have a cutlery window at least once a month.

A June window display arranged by Mr. Smith in the Ashdown hardware store at Calgary—Note the care taken in the arrangement of the background and the resultant good effect.

Details of Background.

The accompanying illustration shows a window which we put in the first week in June. It was directed toward the wedding present trade, and certainly proved of material assistance in making sales. The details of the construction of this window, particularly with regard to the background, may be of interest. The background was covered just with red sateen. Then orange sateen was cut in diamond shape and fastened on in the centre of the space. On this diamond, cutlery of all descriptions was shown. The upper edge of the background was trimmed with brass chain, scissors being suspended in the loops made by the chain. Show cards were also used on the background where they show to the best possible advantage.

The end space was covered with orange sateen and draped with brass chain. Show cards were also displayed.

The entire bottom was covered with orange sateen and a step about a foot high was erected across the back and end, thus helping to relieve the display of any suggestion of flatness. On the bottom a variety of goods appeared—brass goods, cut glass, case cutlery, carvers and other lines, suitable for wedding gifts.

At night the window was lighted up and the goods showed to excellent effect, attracting much attention.

The Fixtures Used.

It is advisable to keep a certain number of permanent fixtures for use in arranging displays. I use pedestals and always have a number of small boxes of various sizes. These can be used in building up steps, pyramids, or any formation desired.

Do Not Overcrowd.

One of the greatest faults with many window trimmers is that they try to show too large an assortment of goods in one display. Do not overcrowd, but rather try to make every article shown stand out so that it cannot escape being seen.

It is Worth While.

Window trimming has become in the last few years a very important factor in the management of the hardware store. The merchant will find that he has an opportunity to advertise economically and with best results through his show windows. The subject is therefore, worth the closest of attention. The window trimming department should be counted as of equal importance to any other.

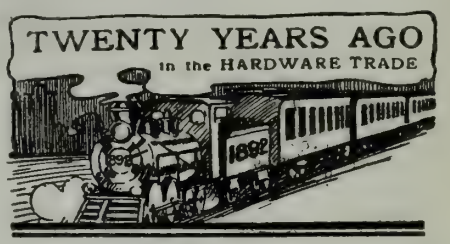
As stated above, the advertising secured from the show window is an economical form. It does not pay, however, to try to make it too economical. The expenditure of a small amount will enable the trimmer to improve his work wonderfully and the results will be far beyond expectations.

One of the most essential things is to see that the displays are changed enough. People get tired of looking at the same old displays day in and day out. Change often and make each display attractive. If a store has good windows regularly, people will soon learn to look for them and will even go out of their way to see them.

I may say in conclusion that cleanliness plays a very important part in window displays. Always see that the articles shown are clean and shining. Dusty and fly-specked articles are not likely to rouse people to the point of entering the store to buy. Above all things, have the plate glass spotless and highly polished at all times. Keep the windows well lighted up for displays always appear to better advantage at night.

—⚙—

FUNERAL OF LATE THOS. G. DEXTER.



Toronto, July 5.—The funeral of the late Thomas G. Dexter took place this afternoon. It was very largely attended, for not only were all employees of H. S. Howland, Sons & Co. present, but there was a representative gathering of hardware men from all parts of the country, including many well known manufacturers and wholesalers.

The services at the family residence, 125 Huntley Street, were conducted at 2.30. Rev. Dr. Thomas, late of Jarvis Street Baptist Church being the officiating clergyman. The cortege then proceeded to Mount Pleasant Cemetery, where interment took place. The pallbearers were: Thos. G. Dexter (eldest son), J. B. McArthur, Peleg Howland, D. H. Foster, C. J. Knott, and T. B. Williamson.

The number of floral tributes received was exceptionally large, so large that it is impossible to give a list. Mention may be made, however, of the following from the various departments; a wreath from the warehouse; a basket from the traveling staff; and a wreath from the office staff.

Among the prominent men in the hardware trade present were: Cyrus A. Birge, Steel Co. of Canada, Hamilton; Adam Taylor, Taylor-Forbes Co., of Guelph; H. G. Wright, the E. T. Wright Co., Hamilton; A. Hatch, Canada Steel Goods Co., Hamilton; S. H. Alexander, Wood-Valance and Co., Hamilton; James Hardy, Jenkins & Hardy, Toronto; A. E. Gilverson and W. J. Lawson, Rice Lewis & Son, Toronto; J. B. Reade, Kennedy Hardware Co., Toronto; H. T. Hunter, Hardware and Metal, Toronto; W. L. Edmonds, Hardware and Stove Journal, Toronto; Thos. Mortimer, Toronto; George W. Howland, Toronto; W. B. Morrow, Toronto.

The offices and warehouse of H. A. Howland, Sons & Co., were closed for the afternoon, as a mark of respect, and to allow all members of the staff to attend the funeral.

The following items are taken from the files of July 16, 1892:—

This Week's Motto

"When you borrow money, you borrow trouble."

Editor's Note.—Right. That is a good motto for the retailer to remember. It might be added, "when you let anyone borrow money from you, you make trouble for yourself. The customer who buys on time is simply borrowing from the merchant.

* * *

"Glencoe merchants have adopted the early closing system, and after Monday, July 11, their stores will be closed at 6 p.m. every day except Saturday."

Editor's Note.—The late closing system dies hard. Early closing has certainly gained since that note was penned, but the gain has been very slow and there is still a long way to go.

* * *

"The Hamilton Powder Co. will start a branch warehouse in Vancouver.

"T. S. Simms & Co., brush and broom manufacturers, St. John, N.B. are compelled by increased business to take larger quarters.

"John Hamilton, paint dealer, Richmond, Que., has been burnt out."

* * *

"There has been a good deal of selling of tin in New York during the week. This market is quiet at 24½ cents."

Editor's Note.—Tin has advanced very considerably since that time. Last week it was quoted in Toronto at 48 cents, the only time it has been below 50 cents for some weeks. In the last twenty years, the consumption of tin has increased to a wonderful extent. The consumption of tin plate for the manufacture of cans has become enormous. Nearly everything is done up in tins nowadays, and some say that the canning industry is just in its infancy.

Methods of Marketing Harvest Tools

These are Wanted Now by the Farmers— Abrasives Should be Kept to the Front—Window Displays are of Genuine Value — Something About the Hay Fork.

It is too hot to work, some are saying. But nature has so such excuse for laziness. It is not too hot for crops to grow, and therefore it is not too hot for farmers to make ready to harvest these crops. Neither is it too hot for the hardwareman to prepare to supply the farmer with the harvest supplies which he will need.

No this is a season of possibilities. The farmers have been grumbling. Farmers are always grumbling. They would, it has been said, have some fault to find with the climate in heaven. However that may be they are now finding fault with the climate in Canada, which Canadians are agreed, is the nearest thing to heaven which this old earth affords. The weather was too cold and damp. Now it is too hot and dry. So the farmers say. But even while they are complaining the crops are advancing, and the farmers themselves are making ready to garner these.

Accidents Will Happen.

Already there has been a good deal of hay cut, and put away in the hay mow. For this there have probably been forks bought, and perhaps hay forks. But farmers are apt to have accidents which make a new fork necessary. Hired hands are still more likely to have such accidents, for they are not too careful with the tools given them.

There is still a big business to be done in harvest tools. Indeed the back of this business has not yet been bent — much less broken.

The hardwareman who has a good trade with farmers, might well remember the importance of harvest tools now. They might well remember that these tools are of a class which are wanted in a hurry. Often the farmer never thinks of his deficiency until he starts to take in a crop. Then he finds he is short two forks, and that a hay rake would be very valuable.

What he says, upon such a discovery, really doesn't much matter; but what he does is interesting. As a general thing the farmer calls a boy—there usually is a boy around the farm. He tells this boy to hitch up and drive to ———— for two forks and a rake. But who is ————? He may be the hardwareman with whom the farmer has dealt for years, or he may be a hardwareman in whose store the farmer has seen, on his latest trip to town,a good display of harvest tools.

If the latter is the case the window will have brought the dealer a sale, and possibly a new customer. But, even overlooking this chance, a window trim of this class of goods is well worth while. It serves not only as a magnet, but as a reminder for the farmer.

What an Eastern Ontario dealer has to say on this subject illustrates what is meant.

"Regularly," he states, "I arrange a harvest tool trim. I try to make this attractive, and I also try to get a wide variety of articles in it, for I find that the farmers examine such a window carefully, and while they do not often buy immediately after making their inspection, the sales come later. I always put in samples of abrasives. Those to me, seem to prove that the window acts as a catalogue. Often boys have been sent in here by farmers to make purchases, and frequently they finish by asking for a whet stone. I think the sight of these abrasives made the farmer think that he would need a stone for his scythe, and he probably shouted to the boy to bring this article after he had enumerated what else was to be bought."

Scythe Still Needed.

Speaking of scythes brings it to mind that these should have a place in any harvest tool window, or indeed in any display of harvest tools. The modern reaper, has, to be sure, put these a little in the back ground; but there are still fields with zig-zag fences; there are still fence corners, and while there are, there will be a demand for these goods.

It is not too late yet for the sale of hay forks. These are becoming more and more generally used in the barns of the well-to-do-farmers. Those who have not adopted this quick means of unloading, may be quite willing to consider it, after putting up their hay by hand. The slings for oats, barley, and wheat may be very appealing to them.

Hay Forks Save Labor.

There are several hardwaremen who have secured good sales of hay forks by going through the country speaking to the farmers about these. They have been able to say just how much track would be needed, and where the barn is of huge size—as some are—they have suggested that switches be put on the track, enabling the hay to be spread more evenly over the mow. Those switches save time, and of course it is to save time that the hay fork is used. With a hay loader in the field and a hay fork in the loft a crop can be brought in pretty quickly. Moreover, the hay fork saves as much labor in the unloading as it does for loading. One man in the field and one man in the mow can do a tremendous amount of work, and that means much to the farmer in these days when the farm boys are coming to the city and when farm help is so hard to secure.

"There is one thing I have found about hay forks," remarked a Richmond dealer. "It is almost impossible to sell them unless you can guarantee to install them. If you agree to do this the sale is easy. Farmers do not like to do this work themselves. Usually they are too busy for one thing. Then they are'nt quite certain that they know how. I find it pays to send a man out to put in the track properly. That helps future sales too, for neighbors ask about the hay fork, and are told that we put it in."

NEW MARKET FOR CANADIAN CEMENT.

The Weekly Report sent out by the Department of Trade and Commerce, Canada, contains a letter from E. H. S. Flood, Trade Commissioner for the British West Indies. Among other things he treats of the cement situation, showing that little Canadian cement is used there ,and pointing out that the English cement—which is now in great demand —is being sold at a higher figure than would have to be asked for Canadian cement.

In view of the reduced duty on cement coming into Canada, what Mr. Flood has to say in this connection will be of especial interest to manufacturers.

He writes:

The quantity of cement imported each year values about $300,000. There appears also to be an increasing demand.

Three-quarters comes from Great Britain, the United States supplying a small quantity only. Canada as yet has no share of this trade. One of the leading merchants handling cement informs us that the market is so conservative that there would be difficulty in creating a demand for any other than English. The plan suggested for Canadian manufacturers would be to send the superintendents of public works in the various islands free samples to be tested and reported on. These reports in the hands of dealers would justify them in taking a quantity and introducing it. The quotation for British cement in Barbados is now $2.65 per barrel.

Hardware Store Publicity

Chapter 11—Something on Style.

Simplicity and Directness Are the Qualities to be Aimed at in Writing Advertising Copy—Avoid Exaggeration and Near Humor — Make Sentences Brief And to the Point.

There are many things to be considered in preparing an advertisement—the lay out, the kind of type to be used, the illustrations, the headline, the slogan. All are important features. A good ad. is one which does not fall short in any particular.

There is one quality which an advertisement requires above everything else, however. It must be well written. The most attractive lay-out, the best of cuts, the most skilful work on the part of the printer; all would go for naught if the reader, on getting down to perusal of the copy, found that it was poorly or ungrammatically written, with arguments faultily conceived and weakly presented. He would throw it aside with indifference, perhaps even resentment. The lay-out and typographical features of an advertisement are, after all, surface features, designed to catch the eye. Cases are known where the most effective advertisements have consisted of a single cut or drawing with practically no reading matter at all. There are, of course, such exceptions to prove every rule. The average retail advertisement must draw its real strength from the quality of the "talk" that the writer puts into it.

On coming to the question of the style to be used, a better way of stating the case cannot be found than to quote the old adage, "brevity is the soul of wit." It is more than that. Brevity is the soul of emphasis as well as wit and the badge of sincerity. A plain, brief statement carries conviction with it more readily than a lengthy rigmarole. If you can "come to the point," if you can hit the nail on the head with a few words, you will be a success as an advertising writer.

Simplicity and directness are the qualities most to be desired in advertising. Make each statement tell something. Bare your sentences of unnecessary words and superfluous phrases. Do not try to be funny, and avoid exaggeration. At the same time, do not make your matter absolutely colorless, and don't be afraid to praise your goods to the fullest extent justified by their merits. Don't be afraid to put enthusiasm behind your pencil; only don't let it go too far.

These are, necessarily, general directions. Some men can transgress all rules and still "come through" with snappy and effective ads. It pays to adopt an individual style if, as one man has said, "you adopt the right kind of individuality." If a writer can turn out copy which people will read and always look for, which does not antagonize or descend to buffoonery, he will get splendid results. The individual touch is the most potent of forces, but no ad. writer should attempt individuality, unless he is sure of himself. "Near—writing" is dangerous.

Brevity—that's the first quality. The writer has come across the following ad. of an oil stove which gives a variety of good arguments in very concise style:

> "It means economy and comfort for the summer. Note the cost—18 cents a week will do all the baking and work required for an ordinary family. It is less trouble than coal or wood. You can bake, roast, fry or boil as good and much faster with this oil stove than with any range. No odor. No danger."

Each point is stated briefly, but effectively. This line of argument could be rewritten and enlarged upon very considerably, but it would lose force in the operation.

Do Not Exaggerate.

The ad. writer must not "damn with faint praise." He must be wholehearted in his advocacy of the goods he has to sell. At the same time, he must keep within bounds. Consider the following:

> "This range is the embodiment of every best feature in range construction. Some ranges have two or three good points. The effort of the es them all. The effort of the makers is to produce a range that is efficient in every detail, no matter what the cost. The——is the result; yet it is by no means an expensive range—on the contrary, it will save your fuel bill and it will last a lifetime."

This is a mild form of exaggeration—compared to what some of our best exaggeraters can do—but it is weaker than the advertisement quoted above, for the reason that it goes too far. The average person will believe a statement which is reasonable on the face of it, but becomes suspicious when too much is claimed.

Be specific. It does not pay to write your copy in vague terms. Make each statement clear.

Lengthy introductions are not wise. Only a few readers will wade through them. Arrange your matter so that the "meaty" statements are well to the fore. The first sentence should contain the material to engage the reader's interest.

Avoid both the peremptory and obsequious forms of address. In the writer's opinion, it is not good policy to declare "you must visit us!" We confess also, that we do not like the common phrase, "We respectfully invite you to visit us." Do not either command or entreat. Put it up to the reader that it is worth his while to visit you.

Avoid slang. It cheapens an ad. ordinarily. There are, however, phrases in common usage which are highly expressive and can sometimes be employed.

It is equally dangerous to dabble in long words; more dangerous, perhaps. All people, more or less, understand the slang. Few will understand the long words.

Keep your sentences short. A long sentence may confuse your meaning and it will certainly confuse the reader.

—⚙—

CARRYING MINE CHEMICALS.

Cobalt, Ont.—The Geo. Taylor Hardware Co., make the following announcement:

> We have added another line to our business, namely, that of mine chemicals and Assayers supplies. Our stock is not yet complete, but we have on hand 102 casks of the product of the Morgan Crucible Company. These are Battersea goods and consist of crucibles, scorifiers, muffles, bricks, clay rings, muffle doors, magnesite, gasoline furnaces, roasting dishes, etc.
>
> Other goods are on order and we expect shortly to have a complete line of all articles required by the mine and assay office in shape of chemicals.

Editor's Note.—There are always new lines which hardwaremen can take up if they study local conditions. In the present instance, the firm will have a splendid opportunity to sell to the mining companies of Cobalt and the success of the department is assured. Any dealer who looks over his own district will discover some new line which he can profitably handle without straying far from the regular line of business.

—⚙—

NEW VARNISH CO.

The Lionne Varnish and Leather Goods Co., Limited, have been incorporated with a capital stock of $100,000 and headquarters at Montreal.

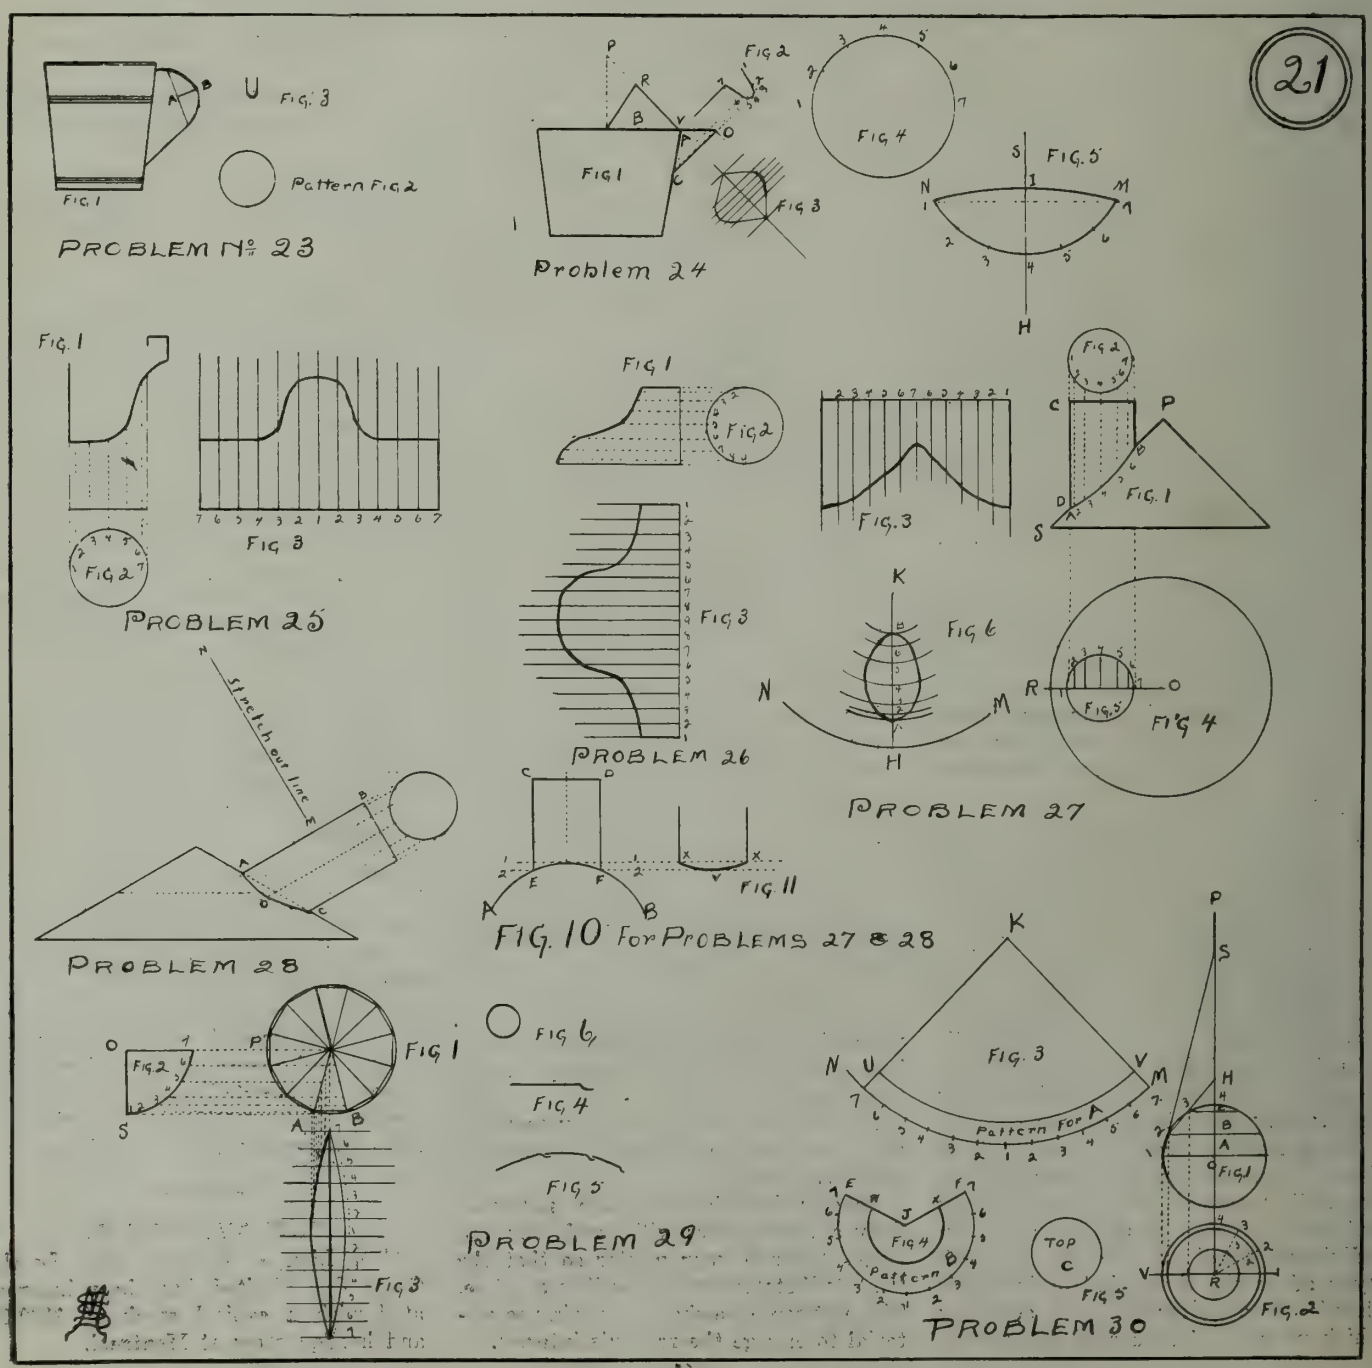
Complete Course of Sheet Metal Work

By L. W. KOSER

Problems 29 and 30 represent two different methods of making sheet metal balls. Prob. 29 is known as the gore method, and prob. 30 as the zone method.

To develop by the gore method we first draw a circle the size of the desired ball. Then step it off into any number of equal spaces according to the number of pieces we wish to make it from. Having the half of one of these spaces on either side of a vertical line dropped from the centre, as the space A-B.

Now project a horizontal line from the centre of the ball, as the line P-O, and drop a vertical line from this as O-S. Then with the compass set to the radius of the ball and with O as a centre, draw a quarter circle and divide it off into any number of small spaces (the smaller the spaces the more accurate will the pattern be).



Now draw horizontal lines from each one of these points until they meet the two mitre lines formed by lines drawn from the points A to B into the centre of the ball.

Now drop a vertical line from the centre of the ball, and lay out on this twice the stretchout of fig. 2, or one-half of the ball.

Draw the usual measurement lines and intersect these by lines drawn from the different points on the mitre lines.

The ball will look better if the pieces are slightly raised on the hammering block. In cutting out the ball it is well to allow a small flange, which should be formed to the shape shown by fig. 2. This allows the edges to butt together, as shown by fig. 5.

Cut out a small circle as fig. 6, and fit this over the ends of the gores after the

ball is put together, as this renders it more solid. If the ball is to stand any strain then put a disc through the centre.

To develop a ball by zones, first draw the circle fig. 1. Divide half of it off into the desired number of sections as shown. Project a vertical line through the centre of the ball as O-P.

Now draw a line from 1 to 2, fig. 1, and project it until it meets the centre O-P, as at the point S.

Then draw a line from 2 to 3, and project it until it meets the centre line, as at H.

These lines represent the radii for developing the zones A and B.

These zones are merely frustrums of a cone, or are like the sides of pails, each one getting gradually smaller, the more zones, the more accurate the ball will be.

What we want to do now is to get the circumference around the bottom of each one of these zones or frustrums of cones, so we can develop the pattern for each one the same as we would develop the pattern for different size pails.

We, therefore, carry the vertical line, O-P, on down through fig. 1, and at any convenient point on this line as R, and with a radius equal to the radius of the circle as O-1, and with R, as centre, we draw the outside circle of fig. 2. Then with the radius B-2, of fig. 1, and R, of fig. 2 as centre, we draw the next circle, which represents the base of the section or zone B, as the outside circle represents the base of the zone A. Then with the radius C-3, of fig. 1, and with R as centre, we draw the inside circle.

We now divide the outside circle of fig. 2 off into equal parts (for convenience sake, we only need to divide one-quarter of it, and when we want to lay out the stretchout we can lay out four times this space).

(To be continued.)

Price Problems---4. Plates and Sheets

Although Tin is Double To-day What it Was 20 Years Ago and Lead Has Advanced Rapidly, Terne Plates are Selling at a Lower Figure Now—The Same is True of Other Lines—Improved Efficiency in Production is the Reason.

A comparison of metal and sheet metal prices for the past twenty years reveals a condition which is paradoxical, to say the least.

Tin in 56 and 28-lb. ingots is to-day quoted around 50 cents. Twenty years ago it was quoted at 23 cents.

Lead to-day is selling at 5½ cents and twenty years ago the quotation was 4 cents.

After noting the remarkable advance in the cost of the raw material, one is rather astonished to find what has happened in respect to finished materials.

Bright cokes, Bessemer steel, we quoted to-day at $4.25. The price twenty years ago was $4.00 to $4.25.

Terne charcoal plates are selling to-day at $7.50 to $8.. Twenty years ago the price was $8 to $8.25.

These are not isolated cases. The same condition can be found in galvanized sheets, charcoal tin boiler plate and other lines.

Increased Efficiency.

The fact that the finished article is manufactured and sold to-day at a lower figure than when the cost of raw material was less than half the present charge, is a tribute to modern efficiency. The chief reason why some plates and sheets have become cheaper is the great improvements which have been effected in the methods of production. The mills to-day turn plates and sheets out with remarkable rapidity and the cost of production accordingly has been lessened.

Another reason is that steel has become the staple material for the manufacture of sheets. Twenty years ago, iron was used. To-day steel has almost entirely displaced iron, although some firms are manufacturing "puddled" iron sheets which are reputed to have great staying qualities. The change from iron to steel has also contributed appreciably to the reduction of the cost of production.

Tremendous Consumption.

The increase in consumption in these lines has been tremendous in the last twenty years. The tendency to put up groceries and other staples in tins and the great vogue of metal shingles, sidings and ceilings have been contributory factors.

"I cannot estimate the increase in the consumption of plates and sheets since the closing years of the last century," said a prominent metal man recently. "The demand has been doubled many times over. And in some respects, the industry is still in its infancy."

The use of galvanized sheets for exterior work is a development practically of the last fifteen years. Previous to that, black iron sheets were used and a coat of paint was applied to keep off the rust. The metal ceiling industry is also a comparatively recent development. Ceilings were installed twenty years ago, it is true, but they were crude compared to the artistic and useful ceiling of to-day. Patterns have been improved and the methods of construction have been changed very much for the better since that time. It is, perhaps, within the last ten years that the present popularity of the metal ceiling began to manifest itself.

Certain it is that the present scope of the business in metal sidings and ceilings does not apply to the future prospects of the industry. There are almost limitless prospects for future expansion and every day brings evidence of this.

Improved Service, Less Cost.

It becomes apparent, therefore, that there have been great strides forward in the manufacture of plates and sheets. The output has been enormously increased. Despite the doubled cost of raw material and the improvement in output, the price on these commodities has been slightly reduced.

The figures quoted above would appear to bear out those who assert that the increase in hardware prices has not been at all in keeping with the advanced cost of raw material and manufacture; and far behind the advances made in other lines, foodstuffs, for instance.

The articles which have already appeared in this series have dealt with the prices, past and present, of copper, stoves and paint. It was shown that stoves and paint have lagged behind in the mad race which all goods seem to be participating in, the goal of which is higher prices. While stoves and paint are higher certainly than twenty years ago, the advance does not begin to cover the increase in the raw material and the cost of production. The present article demonstrates that in some lines of plates and sheets, the price has actually receded in the face of unprecedented advances in raw material. Is the same true of all hardware lines? After perusal of such statistics, the question intrudes itself, is hardware being sold too cheaply

The next article in this series will deal with certain lines of builders' hardware.

Progressive Hardware Retailing

The Present is a Good Time to Hold a Sale of Warm Weather Goods—An Original Window Display of Train—Northern Firm Take up New Line—Featuring Sprayers.

HAVE HOT WEATHER SALE.

"It's an ill wind which blows." When there is no wind blowing at all, as during the past week, it is still an evil state of affairs if someone does not benefit directly or indirectly.

The present warm spell is, in the opinion of the writer, a splendid opportunity for the hardwareman to clear up his stock of screen doors, window screens and other "warm weather goods." If people neglect to purchase now, they are likely to go on neglecting for the rest of the summer. This is not absolutely the last chance, but it is a good time, just the same, to make a big effort in these lines.

There are other reasons urging to dealer to sell the stock he has on hand. He will soon be getting in his fall stock and space in the store will be at a premium. Why not hold a warm weather sale?

Some dealers are doing this. The following is a quotation from the advertisement of a Northern Ontario dealer:

Here's a chance for you to buy screen doors, screen windows and refrigerators at a figure almost as low as what we paid the manufacturer. We recognize that this is the time to buy and as we need far more room for new stock on the road, we're going to clear out the following lines at the prices quoted:

SCREEN DOORS.

Regular $2.25 now $1.95
" $1.50 " $1.30
" $1.00 " .. .. .95

These prices are for doors complete and ready to hang.

SCREEN WINDOWS.

Regular 25c. now .....19c.
" 30c. " .. ..24c.
" 35c. ".. .. ..29c.
" 40c. " .. ..34c.
" 45c. " .. ..39c.
" 50c. " ....43c.

REFRIGERATORS.

Regular $ 9.00 now.. .....$ 7.90
" $10.00 " .. ..$ 8.90
" $13.50 " $12.40
" $18.00 " $16.90
" $20.00 " $18.50
" $21.00 " $19.25
" $23.00 " $20.50

FLY SCREENING.

18 inches wide, per yard.. .. ....10c.
24 " " " " .. ..12c.
26 " " " " 14c
28 " " " " .... .. .17c.
30 " " " " .. ..19c.
32 " " " " .. ..21c.
34 " " " " .. ..23c.
36 " " " " .. ..25c.

These prices are for doors complete and ready to hang.

FEATURING SPRAYERS.

Moncton, N.B.—The Sumner Co., hardware dealers, are now featuring automatic sprayers, and are advertising the fact that the particular sprayer they are carrying is "the climax of all sprayers; combines every conceivable point of excellence, including economy; durability, low price and ease in carrying and operating.

They are also advertising a fresh stock of pure paris green.

Editor's Note.—This is undoubtedly the time to feature such goods. The warm weather has brought along the "pest crop" and, if trees, bushes and plants are to be kept healthy, they must be sprayed. It would pay every hardware dealer to conduct a vigorous cam paign along these lines.

REUNION WINDOW DISPLAY.

Chatham, Ont.—On the occasion of the Old Boys' Reunion, held in Chatham the first week in July, the Willard Hardware Co. had a very appropriate window display, the central feature of which was a locomotive and tender constructed entirely of articles comprised in the hardware stock. The display attracted a great deal of attention.

The boiler portion of the locomotive was a galvanized iron tank, surmounted by smokestack (small stove pipe), headlight (dark lantern) and bell. A large tin ice box placed upon an express wagon and surmounted by a topping of charcoal represented the tender. The engine cab was also shown by a large tin box, while the wheels were represented by rubber hose, with register grates in the centre, and staves represented the piston-rods. A square, connected with the front of the engine by means of pocket rules, formed the cow-catcher. Other minor details were furnished from articles in stock, which to add a final realistic effect, three lines of twine, strong from the prongs of a couple of reversed pitchforks, stretched from one end of the window to the other, representing the accompanying telegraph wires. The locomotive was labeled "Willard's Special—Chatham or bust."

The foreground was given to a display of various tools, each with a catchy sign card attached. Thus, with a level, "We do business on the level"—and so forth.

Editor's Note.—That this display brought results cannot be accepted as an assured fact. Ingenuity and originality are prime factors in successful window dressing.

TWO TOOL DISPLAYS.

Montreal, Que.—The E. Cavanagh Co., of Notre Dame Street West, are featuring tools at present. Two fine window trims have been arranged—Trims which should draw business.

CELEBRATION DISPLAYS.

St. John, N.B.—The Loyalist city of St. John is in holiday attire this week and there are hundreds of visitors brought back to the homes of their earlier life by the call of "Old Home Week.' All the leading dealers in the city lent their efforts to aid the movement for the affair, and the result was that all roads seemed to lead to St. John, and every incoming train and boat was thronged with people coming to spend a week here. Business has been particularly bright.

The windows of local hardware dealers have taken on a different appearance from that which they have borne for some time past. Displays are in the nature of a "welcome home," or "welcome to our city," etc., and intermingled with bunting, pictures of St. John and other decorations, are an appealing assortment of goods which should induce custom from the visitors. Every dealer has temptingly shown an attractive line of souvenirs of various kinds, as well as a range of novelties, mostly of local interest. Silverware and cut glass are displayed, in addition to the souvenirs, and the demand on mostly every line calculated to create the same, has been well up to expectations. Few visitors will return to their homes without bringing with them a remembrance of some kind, and the variety of ornaments, etc., shown last month for bridal presents is again in evidence in the stores, and the displays are creating much interest.

Current News of Hardware Trade

Death of James Baxter.

Toronto, Ont.—The death of James B. Baxter, who has been connected with Stauntons, Limited, wall paper manufacturers for 38 years, occurred at the General Hospital , after a long illness. He was 65 years of age.

Death of G. Smith.

Wingham, Ont.—G. Smith, who after being in the hardware business here for only a few months, was burned out, died last week. He was stricken with an attack of typhoid, and never rallied.

Got Lightning Shock.

Toronto, Ont.—H. J. McSherry, a hardware merchant in Gerrard Street, received a severe shock, paralyzing one of his arms, when the recent storm was at its height. He was handling an iron pipe in his store at the time, when the shock passed through into his arm.

Store Was Damaged.

Regina, Sask.—Armstrong, Smith & Dowswell, hardware dealers, had their plate glass windows broken by the tornado which visited this city with such fatal results. Their upper front windows were blown out, and the back part of the building was considerably damaged. Fortunately, however, the stock was not damaged.

Fred McBrien to Wed.

Toronto, Ont.—Ald. Fred G. McBrien, "the boy wonder of Ward 6," who was a member of the City Council almost as soon as he was old enough to vote, is to be married. The bride-to-be is Miss Irene Jarrott. Cupid's campaign was conducted very quietly, and suspicion was first aroused when Miss Jarrott recently resigned from the Public school teaching staff. Ald. McBrien is only 25 years old, but has already been surprisingly successful in business, and has built many dwelling houses in Toronto, besides netting a neat little fortune out of his prosperous hardware business. The bride-to-be is conceded to be one of the beauties of the Toronto teaching staff.

To Vote on By-laws.

Owen Sound, Ont.—At a special meeting of the Owen Sound Council it was decided to submit to the people on July 14 next two industrial by-laws involving loans to the amount of forty thousand dollars for twenty years. The industries are a steel wire and nail factory, promoted by Mr. John H. Cole, of Cleveland, head of the nut and bolt works which is at present under construction; and the Superior Match Company of Toronto, which company was represented by four men who looked carefully over Owen Sound with its physical conditions, and practically decided to locate.

Store Burglarized

Woodstock, Ont.—Some time between Saturday night and Monday morning, the hardware store of McKiggan & Son, on Dundas Street, was broken into and about a dozen razors, a few spoons and a couple of dozen pocket knives were stolen, along with eight cents in cash.

The thieves got into the workshop at the back of the store, through a window facing on the R. E. Butler Lumber Co.'s yard. They then unscrewed the nails to the door hinges and got into the store. It was a peculiar fact that solid silver articles and the finest cutlery were left untouched, and the safe, containing about $130 was not tampered with. Lots of packages were opened and the contents left on the counter, but the loss is slight to what it might have been.

Ross Bros. Sell Out.

Edmonton, Alta.—The business and stock of Ross Bros., have been sold to the Marshall-Wells Hardware Co., which will be incorporated in Alberta, with a capital stock of $1,000,000. The amount involved in the purchase is said to be in the neighborhood of $400,000.

The firm of Ross Bros. was one of the oldest in the Canadian West. James Ross started the business in 1879. His brother Fred. Ross joined in with him in 1883, and the firm name became Ross Bros. at that time. The following year, they built their first store on Second Street. Three years later they moved into a bigger store and became general merchants. For ten years they continued to deal in general merchandize, but then decided to return to hardware. The present building was erected in 1910. It has been leased to the Marshall-Wells Co.

The members of the firm were Fred Ross, Sr., James Ross., J. C. Dowsett and James Hooper. K. B. McKenkie bought out Mr. Hooper's interest several years ago.

Business Changes.

Transcona, Man.—Campbell and Lozo, dealers in hardware, have dissolved partnership. F. J. Lozo is continuing the business.

Winnipeg, Man.—J. A. Tilt has taken over the business of Gilmore and Co., hardware dealers and decorators.

Pangman, Sask. — McSherry and Chase, dealers in hardware, are reported to be dissolving partnership.

Brownlee, Sask.—C. W. Gimby, hardware dealer, has been succeeded by Douglas and McDonald.

Carmangay, Alta.—James McNaughton has sold out his hardware business.

Vancouver, B.C.—The Gunning Hardware Co., Central Park, are discontinuing business.

Hanley, Sask.—Diley and Moore, hardware dealers, have been succeeded by the Western Farmers' Supply Co.

Brantford, Ont.—D. Grady has purchased the balance of the manufactured stock of the Brantford Steel Range Co. He has also purchased the business of W. J. Bragg, East Colborne Street.

Craik, Sask.—F. Parsons has resigned his position in the hardware store of E. H. Tusull.

L. W. Koser, of the Galt Art Metal Co., Galt, has joined the staff of the Metallic Roofing Co., Toronto.

T. L. Thacker, formerly with Thos. Birkett Son & Co., has joined the sales staff of Lewis Bros., Montreal.

New Retail Firms.

Medicine Hat, Alta.—W. Emerson has started a hardware store here.

Montreal, Ont.—Levac and Lalonde have started in the hardware business here.

Personal Notes.

H. L. J. Keroack, of Upton, called upon a number of Montreal manufacturers this week.

A. J. Teakle, of Herman Young Co., Quebec, spent several days in Montreal this week.

W. W. Ingersoll, Manager of the Dougall Varnish Company, has left Montreal for a month's business trip through the West.

E. Bouchard, of the claims department, Lewis Bros., has returned from a vacation spent at St. Donat de Montcalm. Gordon Bambridge, of the sales department, is now touring in the White Mountains.

WINDOW TRIMMING COSTS.

Is next week's issue, the series of signed window dresing articles will be continued. A well-known young hardwareman has prepared a very interesting article for, in which he deals among other topics with the question of expesses. He has reduced the cost of displays to the lowest possible point. Do you want to find out how he does it Then read next week's issue of Hardware and Metal.

Weekly Market Report --- Metals

METAL NOTES.

Lead is still very scarce. A small advance has been recorded.

Tin and copper have shown weakness. It is confidently believed, however, that this condition is purely temporary.

Business on the whole is characterized by unusual activity.

MONTREAL.

Montreal, July 11.—As usual of late there are several price changes to report, all in an upward direction. Lead has been the metal to change most, but soil pipe, too, has risen, and there have been some fluctuations on the primary market, which makes future local advances seem likely.

Tin and copper have been attracting attention this week by declining, a somewhat unusual move. Tin has dropped quite materially on the English market, but it is not thought that this is an indication of a lower market. It is rather taken as an indication of jockeying on the part of a new interest to get a good figure for the coming Banca sale.

Copper, while it has declined, has regained most of the lost ground. A continued period of lower prices is not looked for.

Lending and Borrowing.

Generally it is stated that business is exceedingly good. The only difficulty encountered is the scarcity of some metals, notably lead. There is a great call for this, and practically no supplies to meet the demand. Shipments which are expected are bought up already.

The starved condition is being met by much lending and borrowing. Those who have a little metal are supplying those who have not, expecting to get a return favor later on.

Tin.—The decline on the primary market, according to many, must not be taken as a sign of a falling market. Rather it seems to point toward a fluctuating market for July, to be followed by raising prices in August and September. Everything seems to indicate that the new interests are trying to force down the price, so that they will not have to pay too much when they load up at the Banca sale, which comes off at the last of this month.

The consumption of tin is large, and the supplies rather insufficient. No real reason is apparent for a weak market.

Lead.—There has been a general advance locally of ¼c a pound. Trail and imported pig are now quoted at $5.50, while bar pig is at $5.75. Sheets, too, have been advanced, these now being quoted at $5.75 and $6.

Copper.—The falling in the market here seems to have resulted from the report of hidden supplies, which is the skeleton in the closet of the Copper market just at present. All indications are that the talk of hidden supplies is nothing more than talk. Careful investigation has failed to show any unknown reserve. The fact that the copper market rallied well on Wednesday shows that it is remarkably strong, and not weak. Lower prices do not seem to be at hand.

Spelter.—Supplies are fairly good. Handlers have found it necessary to pay a good price for the metal, but they are now able to get this in sufficient quantities.

How About Antimony?

Antimony.—Prices remain at the old figures, but there seems to be a feeling that these are too low. Locally supplies are fair.

Iron.—The metal continues strong. It has been found necessary to advance the price of soil pipe, the discount on the list prices having been reduced from 70 to 65 per cent.

TORONTO.

Toronto, July 11.—The outstanding feature of the local market is the scarcity in pig lead. Last week it was reported that the market was practically bare of lead, and there has been no improvement since. Conditions are, if anything, a little worse, for the demand has continued very active.

Business in all other metals continues brisk. The market, in fact, is satisfactory in practically every respect. Weaknesses in tin and copper have developed but no one believes that this will prove other than temporary. Lead has advanced in price and an advance is also noted in soil pipe.

The consumption is very heavy here. All metals are in firm demand. Iron and steel are needed for the vast development in structural and railway work, and there is a correspondingly heavy demand for copper and tin. That this state of activity will be maintained right through seems assured.

Temporary Weakness.

Tin.—The tin market at London showed singular weakness this week. It is believed, however, that the drop has been brought about by skilful manipulation.

The demand locally has been very strong.

Copper.—News from the primary markets is disturbing and this caused weakness here. A New York despatch reads: "After the recent declines in copper market abroad, which have been accomplished in spite of the American producers holding their price unchanged at the highest price touched, the trade was decidedly disturbed to have the market open this morning with a decline of £3 2s 6d in Standard, and £1 10s in Best Selected, and this was accompanied with reports that some very large financial interests were the principal sellers. These sales are credited to the taking of profits, and in some cases the putting out of bear account, but they come from too important interests to be ignored. It is evident, however, that the American producers intend if possible to ignore the decline in the foreign price.' The price has not been changed locally and complete confidence is still expressed that the market will soon see a resumption of the upward trend.

Lead is Higher.

Lead.—An advance of ¼ cent has been declared in lead. As noted above, it is still extremely scarce.

Spelter. — The market is quiet but very firm. There is apparently still a scarcity of the metal, but what has happened in copper in the past few days has not helped to create confidence in spelter. Demand is reported to be good.

Plates and Sheets.—There is an active demand with prices firm.

Pig Iron.—A very active business is being done. Prices are firm.

WINNIPEG.

Winnipeg, July 8.—A general strong tone to the copper market and stiffening of copper prices is pointing to higher prices for copper plate and all copper goods. It is becoming evident that the production of raw copper is barely keeping pace with the demand and higher prices for copper have been anticipated for some time.

No further advances are reported in lead and pig iron and plates are steady.

There is a strong movement now in heavy goods and machinery, and the demand for structural steel is as brisk as ever.

Labor troubles have somewhat disorganized work on big buildings, but a speedy settlement of difficulties is anticipated.

Weekly Market Report --- Hardware

TRADE REMAINS BRISK.

The weather has not affected trade in hardware lines to any extent. Business is still very brisk, particularly in harvest tools, which have come to the front.

Some price changes have been noted during the week.

MONTREAL.

Montreal, July 11.—The volume of trade which is noted, at time when people generally are suffering from the intense heat, is simply amazing. Retailers are meeting a ready demand for many lines of goods, and wholesalers—who a few weeks ago believed they would be left with certain styles of goods upon their hands—have instead had to order more of these.

Few price changes need to be noted. There has been one movement in builders hardware—in an upward direction as was to be expected—and screws have been advanced. Aside from this prices are unchanged.

Heavy Late Trade in Sprinklers.

Seasonable goods:—Of late men have been taking to soft collars and soft drinks. They have waited anxiously for rain, but no rain has come. As a result there has been a great trade in hose and sprinklers. Late thought it is in the season the week has seen a heavy demand for these. "We thought," said the Sales Manager, of one wholesale house, "that we were going to be left with a lot of these goods on our hands. That was during the cold weather, of course. Since the change has come the demand has grown tremendously. Far from being left with a stock on hand, we have ordered a fresh supply and this has been practically depleted this week."

Lawn mowers too are moving well, and hammocks and verandah and lawn furniture generally are selling rapidly.

Preserving Goods Moving.

Household Goods:—The coming of preserving season has caused an awakening in this line. Retailers are conducting sales, and the results are evidently being secured or so many supplementary orders would not come to the wholesalers.

Harvesters Tools:—The retail demand for this class of goods is now becoming great. The farmers are somewhat worried by the continued dry weather—and the scorching heat. Still they know they will need the implements which facilitate the taking in of the harvest, and the hardware men are right in preparing for a heavy demand.

Builders Hardware:—No general advance, such as has been looked for owing to the high cost of copper, has come; but this week a change was made in the price of Bronze trimmed front door sets. The new figure asked for these is five per cent in excess of the old.

Screws go Higher.

Screws are another line which has been increased in price, the discount list having been generally changed so that the fourth discount reads 2½ per cent. instead of ten per cent. That is, Wood R. F. Bright and steel now sell at the list price with a discount of 85-10-15-2½ instead of 85-10-15-10.

The scarcity is held partially accountable for the advance of screws. The demand for these has grown with the building contracts, and the increased supply does not seem to have kept pace with the increased call.

The one advance in builders hardware, is, it is generally agreed, the result of higher raw material. Whether it will be the last advance is somewhat hard to say. Certainly the makers seem bound to keep down the price wherever possible.

Good Weather for Sporting Goods.

Sporting Goods:—The tennis season is at its height, and perhaps tennis goods are moving as well as any others. Baseball supplies too are in demand. But fishing tackle, croquet sets—all kinds of articles wanted by sportsmen are moving in an entirely satisfactory manner.

TORONTO.

Toronto, July 11.—The warm weather has checked trade in some lines, but has stimulated demand most noticeably in others. Local jobbing houses have been quite busy during the week. The lines which have come to the fore are sprinklers, hose and similar lines, which were not in active demand as long as the weather remained rainy. The dry, hot spell has created a big retail market for these goods, however, and there has been a steady call on the wholesaler.

"We generally anticipate something in the nature of a slump at this time of year," said one jobber, "but we are certainly not having any yet. The orders continue to come in, and our mail business is so brisk that it bespeaks activity in the trade."

Seasonable Goods.—There has been, as stated above, a good demand for hose, nozzles, sprinklers and so forth. There is also a steady call for typical warm weather goods—screen doors, wire netting, refrigerators and so forth. Most of the orders for goods of the latter class are of the sorting order, but of sufficient size to bring the volume of trade up to unusual proportions. The refrigerator trade is also brisk. Jobbers report that they are loaded up with enough orders to look after their visible stocks for some time.

Tools Selling Briskly.

Harvest Tools.—The big demand of the moment centres in harvest tools. The agricultural sections are now busily engaged, and the sales of hay forks, scythes and so on has become heavy. "The bulk of our shipments nowadays are harvest tools," was the report received from one jobber.

There is also a good demand for twine and rope. Prices have been put up, and the new scale is as follows: Sisal rope, 8¾c; Russia deep sea line, ¼ inch diameter and over, 17c; under ¼ inch, 18c; jute rope, ⅜ inch and upwards, 10c; under ⅜ inch, 10½c; yarn double, 8½c.

Household Goods.—There is a fair demand all around. Two price changes have been made, and they are in the nature of an advance. The discount on copper tea and coffee pots has been put at 40 and 5, instead of 42½ per cent. as formerly. Copper pits are now quoted at 30 and 5, instead of 37½, also an advance. These advances are due, of course, to the rapid increase in the cost of copper.

Builders' Hardware. — The demand from the city has been very brisk, and there has also been a fairly good call from outside points. The activity of the builders is being checked somewhat by the scarcity of brick, but not sufficiently to interfere with the demand for hardware.

Heavy Hardware.—An advance has been made in the price of screws, which will be noted elsewhere. Otherwise, prices have not been changed. There is a good all around demand.

Sporting Goods.—In this department business is very brisk. The warm weather has increased the popularity of aquatic sports, and there has been a call for paddles, canoes, and motor boat supplies. Fishing tackle is also very much in demand.

WINNIPEG.

Winnipeg, July 8.—This and next week will be busy times for Winnipeg wholesalers. Exhibition time is when a vast number of country merchants pay

(Continued on page 49.)

Stoves, Furnaces and Accessories

Pushing the Sale of Water Heaters

Methods Adopted by John Watson of Montreal—Puts a Number of Models in His Store Window — It is Impossible to Quote on Installed Price Without Investigation.

It is the combination work which has won many a lacrosse game. Combination, or co-operation—the more dignified term—has also helped many a business; and now it seems that combination of telephone and show window has been doing a great deal to help the sale of water heaters. Such, as least, has been the experience of John Watson, of Montreal.

Mr. Watson has been pushing the sale of water heaters, lately, and to bring these prominently before those passing his store has placed several models in one of his windows. A good number have been attracted by these heaters, and have come inside to ask about them. They must make inquiry to get all the information, for Mr. Watson has found that conditions differ so much, in different houses that it is impossible to quote an installed price.

Where Telephone Helps.

Many there are, however, who either because they are in a hurry, or because of bashfulness, will not enter the store. Here is where the telephone works well. Now a person may be afraid to ask something to a man's face, but they will willingly ask it over the telephone. This has proved the case with the water heaters, for a number of phone inquiries have been received, and as a result of these several sales have already been made.

"I try not to frighten these people who call me up," remarked Mr. Watson. "Usually it is a woman. Either it was she who saw the heaters, or the husband commissions her to do the telephoning. Any way there is a danger that the woman may ring off without giving us any information which helps us to make a sale.

Don't Hurry After Name.

"I have found it a good policy not to ask, 'Who's speaking' too soon. There is plenty of time for that.

"The inquirer almost invariably says that she noticed a certain heater in my window, but that there was nothing to explain how much this would cost installed. Then I explain why this is. I state what the price of the article itself is, such and such, and point out that it costs more to install them in some houses than others. Then I sometimes ask how the water pipes and gas pipes are fixed in her house. The woman can never tell, and I suggest that I send some one up to look at these. If I have a man going in that direction I say so, and do not let the woman feel that she will be putting us out much by having us inspect her house and give an estimate on the cost of installing the heaters.

Sales Satisfactory.

"In this way we have gone to a number of houses. We have not sold a heater in every case, but the sales have more than paid us for the trouble taken.

It is evident that people are anxious to get these heaters, from what Mr. Watson says. He states that only the other day he went to examine the piping in a certain house; having been asked to do this, only after such a telephone conversation as outlined above.

The estimate pleased the woman who had inquired about the heater. She said she must consult her husband, but asked if the heater could be in working order by Tuesday if they decided to buy it.

"Yes," said Mr. Watson.

Later the order for the heater was given, and immediately after that there was a query to know if it would not be possible to have this in working order by Monday. Tuesday seemed too far off.

Drawing Inquiries.

There are some pointers here which are worth careful consideration. This method of working the window and the telephone together is deserving of some study. Windows might be prepared for the purpose of drawing questions. It might be suggsted by a placard that if there is any thing which the window does not make clear, there are clerks inside anxious to give the information either in person or over the telephone. Then the telephone number might be quoted.

Mr. Watson's method of not asking for the name too hurriedly is also worth consideration. There is a world of common sense in a little deliberateness at such times. Many a sale has been lost through too great eagerness.

Plumbing Goods About to Rise
Early Ordering Should be Profitable

Let all those who are handling plumbing lines for retail sales take warning. Prices are going to rise.

The statement can be made with little fear of any retraction being necessary at a later period. Those who are closely in touch with the manufacturing end have stated that an advance is to be expected.

Here is what a man high up in one large concern has to say:—

"If there are any hardwaremen or plumbers who are counting upon tendering on any plumbing work they should bear in mind that an advance in many of these lines is coming. They should prepare their figures with this in view and should, if successful in their tender, order what will be needed at once. It is a little difficult to say just how soon this advance—or this series of advances—will come. It will not be long in arriving, I believe, but I could not fix the exact date."

That is one man's opinion, and there are others who agree with him. Moreover, every thing points to a rise in prices. Lead, iron and copper are all selling at a higher figure now than they have for a long time. Solder has been advanced. Brass and copper products, used in many plumbing fittings, have been considerably raised. In view of these things nothing but an advance is to be expected. When the raw material leaps upward the finished product must advance at least a little.

It is probable that soil pipe and lead pipe will be among the first products to go up. Iron pipe will not be far behind. Boilers and enamelware are expected to follow too. No raw material is cheaper —many things are dearer—a higher level is bound to come.

But to be forewarned is to be forearmed. Those who retail these things will be able to secure for themselves a better margin of profit by ordering early. Those who intend to make tenders will save themselves from possible loss by remembering the rising market as they figure. They should certainly waste no time ordering if successful, for a day's delay might mean the loss of an advantageous price.

Weekly Market Reports---Stoves

SOME LINES ACTIVE.

The extreme warmth has created a big demand for oil stoves, and has further stimulated trade in gas ranges. The general volume of business has been exceptionally good for this time of year.

An advance has been made in the price of certain lines of copper goods, due to the increase in the cost of the raw material.

MONTREAL.

Montreal, July 11.—The heat is causing a considerable demand for coal oil and gasoline stoves. Those who have put off having gas stoves installed are also ordering these, but generally the great interest in stoves is from the standpoint of preparedness. For ranges and furnaces there is no great retail demand, yet these are being ordered by retailers already, for they want to make sure of a good supply when the fall rush starts.

The greatest interest at present, however, is in kitchenware—a class of goods which is moving in exceedingly satisfactory style. The coming of the preserving season is helping things a good deal—for the necessary supplies must be purchased within the next few days.

Refrigerators Necessary.

Refrigerators, of course, are continuing to sell. Those who put off buying are finding that they can put off no more and still keep their food sweet and fit to eat. So the sales are coming to those retailers who are making the most of the weather to boom these—and the supplementary orders are coming to the wholesaler.

Stove boards, coal hods, and elbows, which will be wanted when fall comes, are already moving well from the manufacturies. Especially large are the orders from the West.

Kitchen Goods:—Aside from the large business being done in this line the only interest is an advance in the price of certain copper goods, which has just been made. The price of copper tea and coffee pots has been slightly advanced, the discount now being 40 and 5 instead of 42½ per cent. There has also been a small advance on copper pits, the discount being changed from 37½ to 30 and 5.

Oil Stoves Moving.

Stoves:—Coal oil stoves and gasoline stoves are being ordered quite largely—this state of affairs being what might be expected in view of the present excessively warm weather, and the poor ordering which came early in the year, on account of the excessively cold weather. The extra business done now will hardly make up for that lost early in the year, but it will help.

Ranges and Furnaces:—Manufacturers are receiving many orders now. Especially are furnaces in demand. There is quite a chance that the price of these will have to be advanced, in common with many other lines, on account of the high price of metal. There is also a chance — indeed, it might almost be called a likelihood—that radiators will cost more this year than they did last. Perhaps the knowledge that such changes are quite likely is responsible for the early orders which some manufactures are receiving.

TORONTO.

Toronto, July 11.—The activity noted in the stove market is unusual for this time of year. All lines are selling briskly. "Our trade," commented a manufacturer to-day, "is just about as heavy as we usually get it in the early fall; much larger than we expect at this time of year." Reports indicate that a pretty satisfactory increase has been made over last year.

The transportation situation has improved, but considerable difficulty is still being experienced. The railways are unable to make shipments rapidly and some complaints are being received from customers on that score.

The trade at present is heavy in such lines as tinware, enamelware and kitchen supplies generally. Large shipments are being made in these lines.

Oil Stoves.—The warm weather has created a good demand for oil stoves. The retailers report that they are experiencing such a good sale that they are rapidly depleting their stocks. Sorting orders are, as a result, very much the order of the day.

Gas Stoves.—The sale of gas ranges, which threatened to fall off a fortnight ago, has picked up considerably since Old Sol began to manifest himself. Every family which lacks a gas stove has found that the need is an imperative one. Those who cannot buy stoves for financial reasons are buying plates. There has been a heavy sale of all sizes and varieties.

A Steady Trade.

Ranges.—Although taking a second place in sales just at present, coal ranges are still pretty active. The demand, though not unduly heavy, is steady and is showing signs of rapid improvement. Several good sized orders were placed this week.

Heaters.—There has been practically no business done in heaters, except that some fall booking has been done.

Furnaces in Demand.

Furnaces.—The warm weather has created active resumption of building operations, and there is, as a result, a better tone to the furnace industry. Furnacemen are now pretty busy, and the manufacturers are finding the demand brisk.

WINNIPEG MARKETS.

Winnipeg, July 8.—A busy week or two in stove sales is usual during the course of the Winnipeg Industrial Exhibition, and great efforts to display goods are usually made at this time when the influx of visitors is large and likely to be larger than usual on account of the visit of H.R.H. the Governor-General.

Business generally in cook stoves of all kinds is improving, owing to the first batches of contracts for cottages and smaller residences being completed and families now furnishing and moving into them.

Gas stoves for cooking are increasing in popularity, and for city use the coal stove generally is coming more into use than wood burners.

Trade in heaters is dull.

HARDWARE MARKETS.

(Concluded from page 47.)

their annual trip to the city and they usually combine a good deal of business with their pleasure jaunt.

Since last review of western trade conditions the business outlook has much improved, abundant rain has insured a crop which from reliable information obtained at first hand is both much in advance of last year's in point of maturity, and likely to be quite up to the average in point of yield. Labor troubles seem likely to peter out without any very serious dislocation of the industrial machinery.

The copper market is very strong, and advances in copper rivets are to be noted. Prices on all copper goods are liable to advance at any time.

The only other change in the local wholesale hardware market is a change in the discounts on round head and flat head iron screws which means higher values.

There is a good general demand for hardware. Heavy goods and machinery are moving freely.

Collections are reported as fair.

DESCRIPTION OF STORE.

Many men wish from time to time that they could start in business afresh, as this would give them an opportunity to benefit more from their experience. Hector A. Bernier, of Montreal, is now havign some such opportunity, for, after years of experience, he has started in business for himself. He has aimed to make his store a model, introducing into it what has struck him as best in the display methods used by others. Mr. Bernier will give a description of his new store in the next week's issue of Hardware and Metal. There will be something for all to consider in this article.

NEW STORE OPENS.

Montreal:—A new hardware store has been opened at 135 Rachel Street East, under the name of the City Hardware Store. H. Zukerman, formerly one of the partners in the People's Hardware Company, is the manager. A full line of tools, paints, oils, granite and tinware, stoves wall paper and shelf hardware are carried.

SATISFACTORY PROGRESS.

Cleveland, O., July 11. — The Iron Trade Review to-day will say:—

In many of the leading lines of finished material, the iron and steel market continues to show satisfactory progress, both as to volume and general average in better prices, and while there is an evident lethargy in new buying for the time being, the strong buoyancy of the market appears sufficient to induce manufacturers to ignore the normal quiet season, and in several instanees to advance prices on finished products, confident that the higher rates can be maintained. Notably is this true in track material, steel hoops, sheet piling and similar specialties, together with pipe and other products. Furnace operators are showing a halting tendency, due to uncertain coke supply or to the high prices now prevailing for coke. The pig iron market is quiet, but very firm.

THE ELIMINATION OF THE WOODEN COUNTER.

(Concluded from page 34.)

his particular line. I do not mean that he drives his man to it. But the customer feels "Well, everything is free and open. These fellows apparently aren't ashamed of the goods they handle or they wouldn't let me get so close to it." And so he buys. Removing the barrier, therefore, promotes confidence.

Looking back over the progress made in store display, the first steps taken towards promoting confidence were the cash register, and the silent salesman. The cash register by displaying the purchase price deposited confirms the merchant's quotation. The merchant purchasing a cash register purchases a friend for his customer. Next the silent salesman reversed the counter idea, and in place of harboring a "Kentucky cave," in which most anything and everything was likely to be found, promoted a display which invited intimacy, confidence, and selling force.

This idea can be pushed to almost any limit in the hardware store, because of the fact that very few articles therein suffer from handling. When the counter, or anything else for that matter, is a prevention to the promotion of interest in your goods, throw it out on the junk heap; it will pay for itself better there than in the store. Let the customer be intimate with you and your stock, let him discuss his purchase with you "cheek by jowl," not by glaring at each other. Provide a chair for him, if necessary (don't get a stiff backed one), make him feel that he is your guest and that as host you are obliged to put him on good familiar terms with everything you have in your store.

He will feel then that if you can extend such liberty, and permit this intimacy, that you have little fear of the goods you sell.

No doubt but that the salesman, who has developed that individuality whereby he can make his customer feel that he is extending real service in his selling methods, rather than trying "to do" him, is the man who promotes permanent lasting business. He promotes a feeling, he don't talk it up, he don't make motions to bring it about, but an underlying current in his selling methods brings it about just as effectively and surely.

Promoting this feeling in the customer brings forth his permanent confident trade, and can be done by just such simple methods as these.

Yes, it is a good idea, especially in a paint department where the actual goods are separated from sight and feeling by the can. Would that we could get some method of letting a customer feel and see the actual goods before he buys.

St. Mary's Hardware Co. Baseball Te am.—Reading from left to right—(Top row) Riley, Bartlett, Craib, Carr; (Mid dle row) ,Waddell, Brown, Ellise, Jameson, White; (Bottom row) Nicol Burgess.

HORSE SHOE FACTORY.

Montreal, July 11.—A horse shoe factory, which it is stated will employ about 350 men, is to be erected for Gilmour Bros. on Pie IX avenue. The building, which is to be 90x102, is to cost $40,000.

PUT IN TANK.

Watrous, Sask. — Watrous Hardware Store has installed a very up-to-date convenience for the automobile men in the shape of a gasoline tank outside their store.

Editor's Note. — The trade of the motorist is well worth trying for. His needs are many and his purse is long.

A HARDWARE BALL TEAM.

St. Mary's, Ont.—The baseball team of St. Mary's Hardware Co. have been cutting quite a figure in local sporting circles. They recently played the town team to a tie 4—4, and have been getting the better of all other commercial teams.

Methods of Retailing Paints and Varnishes

The Value of a Big Paint Display

Magnitude Counts Here as in Everything Else — People are Impressed—Stock Should be Kept Systematically as Well — Some Interesting Pointers.

Written for Hardware and Metal by W. J. Keyes, manager of the Soo Hardware Co.

There is something in a big display. Politicians realize this, hence the bands and buntings which are used to attract a crowd to the political meetings. Crowds generate enthusiasm, and so do large displays of paint—or of any other article sold in the hardware store.

It is acting upon this principle that we have given such prominence to our paint department. Practically our whole stock is arranged near the main door of the store. We thought this would be none too much prominence for the paint department, and events have proved that this idea was correct.

There, as a person enters, are row upon row of paint cans. The goods cannot be overlooked. Everyone who enters sees that we have a wide assortment of paint, and if they are not led to buy then, they will remember our display. When the thought of painting does come across their mind, a vision of that paint display at the front of our store will come almost contemporaneously. I am certain that this large and therefore impressive display of ours has brought us many sales.

Moreover it will be seen that the space given to paint is not, after all, very great. It is wall room only which is devoted to it. No floor space is taken. All the necessary room is left for showing other lines, but those shelves reaching almost to the ceiling display can upon can of paint. We do not let the stock get low. That does not pay. To date we have sold a great deal of paint—more than I expected we would, when I took charge here. This result I think is attributable to the prominence we have given the line, not forgetting, of course, the quality of the goods carried.

We have tried to have a systematized stock as well as a large one. In the illustration which will accompany this description is shown a part of our paint display. In this may be seen the long shelves, with their burden of paint cans. These cans are not put on the shelves in any hit or miss fashion. There is method to their arrangement. The numbers run from left to right. We know within a foot or two where any given number will be. This helps us to give a prompt service, for when a customer comes asking for a certain shade of paint any one in the store can put his hand right on it. There is no need to scan one shelf and then another.

The quick service, which this systematic arrangement makes easy, has had a good effect upon the business as a whole, it seems to me. Seeing how quickly we can give them any variety of paint which they require the people are favorably impressed. The quick service seems to inspire confidence in them—not

An interior display in the Soo Hardwar e Co., which possesses the virtues of magnitude. The paint is arranged by numbers so that quick service can be given.

only giving them faith in our paint department, but in all departments of the store.

While the greater part of our interior paint display is arranged near the door, we have had to put Japans, Varnishes and Stains a little further back. We have, however, followed out the same system of arranging these—so that we can find any particular finish wanted, with as great ease as we can find any shade of mixed paint. The cans are arranged by numbers, and in every row these numbers start from the left.

There is one advantage we have found from having these specialties placed further back in the store. The shelves upon which they are aranged do not stand behind the counters. Indeed there are no counters in the store, for we believe these take too much room for the good which they do. The shelves do not stand against the walls, however. They are placed rather in the centre of the store, forming a natural partition between that part of our store which we have given over to stoves, and that part in which is displayed tools, shelf hardware and specialties.

The result is that these goods are in constant view. People as they pass along see them. Waiting for a parcel to be wrapped up they will pick up a can and make some inquiry about it. When they are paying out their money across the silent salesman we can tell them something of the work which that stain or varnish makes possible. There is nothing forced in such an explanation. It is like a quiet conversation rather than a canvas for a sale, but it brings results. Because these lines are so conveniently shown we have had scores of inquiries about them. We have had scores of sales too, which is the most satisfactory part.

Yes, I believe that a good interior display of paint, and similar lines is good business. I have tried it and have seen the results. I'm like the Scotchman who said, "Honesty is the best policy. I've tried baith."

High Prices for Glass are Predicted

Advices are to the Effect That a Political Upheaval is Brewing in Belgium—This Would Mean the Cessation of all Work—Low Stocks in Canada and England Will Force Prices to Advance.

The following information has been secured from a Canadian importer and manufacturer. It has a bearing on future conditions in the glass trade in this country.

Private advices from Belgium are of a disquieting nature. It is predicted that a political upheaval is brewing there which may be expected to come to a head not later than October or November. Manufacturers there are much disturbed at the outlook. They are refraining from soliciting business and are concerning themselves only with the business of the moment thrust upon them.

If the upheaval occurs, it will be reflected in Canada by higher prices on the commodities which Belgium supplies. We rely chiefly on Belgium for certain lines of iron and steel and very largely for our supply of glass, particularly the plate sheet and plate window glass. Belgium produces seventy-five per cent. of the world's consumption of sheet window glass. England alone buys over one fourth of her sheet window output, while Canada takes about half that amount. The proportion of buying from Belgium in plate window glass by England and Canada is similar.

All Belgium manufacturing is carried on in the Walloon districts, or the southeastern portion of that kingdom, bordering on the north of France. This district is densely populated, almost entirely by the factory employees. The Flemish or rural provinces are more sparsely populated, and are devoted almost entirely to rural pursuits. Clerical domination is felt in the Flemish provinces, and by the present system in Belgium of plural voting, this element is supreme in the country. The catholic party has been in power since 1884. The Walloon element is almost entirely non-Catholic, partaking largely of the characteristics of the people of northern France—cosmopolitic, liberal, even socialistic. With them, feudal ideas have long since passed into history. It follows that there is a marked distinction between the Walloon and the Flemish and the strife has of late years become very bitter. The former had hoped by a strenuous educative propaganda and by hard work to obtain control of the government at the elections held on June 7. The Flemish rural provinces, however, voted as one man, and, although they are numerically in the minority, the plural system of voting gave them greater strength and the government was able to hang on to power. The Walloons were enraged at this state of affairs as they cannot hope to secure universal suffrage, and it is hinted that anything may happen. A revolution may even break out. The workers are well organized in guilds and of late have copied some of the better methods of labor organization. They are determined to strike for the suffrage so long withheld. It is purposed, according to advices, to call out every worker in the Walloon districts and so paralze the commerce of the country.

This would mean the putting out of all the blast, iron and glass furnaces. The consequence would be a cessation of glass production for six months, even if the strike should be of short duration; and from advices and the trend of news the upheaval is sure to be prolonged and very bitter.

Whether the strike matures or not, high prices for glass in England and Canada will develop, owing to the unrest and hesitancy on the part of the makers to accept business. Already English buyers are offering a premium on current agreed prices for sheet window glass for autumn delivery.

There has not been any glass shipped to Canada during the last six weeks owing to the dockers strike, and only one sailing is expected during the month of July. With political troubles looming up on the horizon, Canada and England will be short of glass this fall. It is not to be anticipated, therefore, that manufacturers in the latter country will have any surplus to help make up the deficiency in this country, particularly as high prices will be obtainable in Great Britain.

ADVANCE PENDING.

In the accompanying article, reasons are given for anticipating advances in the price of glass. Belgium, the largest base of supply, is seething with disaffection which may develop into open revolt, leading to a complete cessation of industrial activity. Private advices are to the effect that an upheaval is coming as sure as fate.

INDUSTRY FOR KINGSVILLE.

Kingsville, Ont.—It is announced that on or about September 1, R. F. Green & Co., of Toronto, will remove their gas and gasoline stove business to this town. The Owen Harris foundry has been leased by the new industry, and will be overhauled and extended to meet the needs of the Green concern.

DO DEMONSTRATIONS PAY?

Do demonstrations pay? Can direct results be traced to them? These questions are often asked by hardwaremen. An article dealing with this question will appear in next week's issue of Hardware and Metal.

Stock ELASTILITE. It "Makes Good" For You With Your Customers.

WHEN you sell varnish, remember that if it isn't "right" when applied, you pay for the dissatisfaction of the user by loss of good will and sales. For prosperity, handle a varnish like our famous ELASTILITE. Properly applied on a proper surface, it is proof against weather and sun. Its beautiful finish and wearing quality helps your intersts as a dealer.

This is a good, resistent easily-applied varnish of beautiful luster and finish for indoor or outdoor use, but not for floors. Used for 20 years. Used almost exclusively for the desks in Toronto public schools—a pointer on the kind of service it stands. ELASTILITE is a great varnish to sell at retail, because it gives good results under most trying conditions. The dealer gets the benefit of the quality service ELASTILITE.

Stock this kind of varnish—Elastilite. None better to sell local painters and decorators. Write us for sample and if you have painters in your locality, who you think would like one, too, send their name.

Many other good members in the ML Line. Remember ML Paints and Floglaze. Prices, Cards and Samples Free.

Weekly Market Report --- Paints

WHITE LEAD UP.

Another advance has bees declared in white lead, this time of 25 cents.

There is a singular scarcity of white lead in some sections and the demand is so brisk that immediate relief cannot be hoped for.

Business in all paint lines is remarkably good.

MONTREAL.

Montreal, July 11.—In the market report of last week it was stated that a meeting of the white lead men was to be held shortly and that an advance was certain to be made. It was also remarked that the advance—when it came — would likely be one of some considerable importance. Both of which predictions, coupled with the subsequent events, show that the hardware dealers of the country were given one more opportunity to get in on the ground floor with their buying. A meeting of the lead men was held on Friday, and then an advance was determined upon—this being fixed at 25c.

The prediction made by many students of the market, that 8c. lead is coming is thus one step nearer fulfillment. With a rising pig market, such as has been noted recently, it would not be very surprising if the corroders found it necessary to raise the product 35c more.

Anxiety re Gloss.

Strangely enough the hot weather does not seem to be doing the paint business any harm. Evidently people are defying the hot sun, and are painting exteriors, interiors, and machinery. The retailers are coming back upon the manufacturers for fresh supplies.

This has been a wonderful paint year, and so far there has been no falling off to speak of. In some lines, indeed, the heavy rush has just started. Glass, for instance is only commencing to move rapidly. There is room for some anxiety as regards this commodity, for the supplies are none too good, and all that will be wanted does not seem to be coming.

Linseed Oil.—Still the quotations remain unchanged locally. Manufacturers, however, are still loth to sell. Indeed there have been a number of refusals. The supply of flax does not seem sure enough to make the paint houses willing to jeopardize their future output by selling their oil.

Turpentine.— Little change is noted here. There seems to be a good supply at Savannah, and this is being brought forward satisfactorily. Prices remain steady.

Cause of Advance.

White Lead.—It is the advance in the pig—an advance which it is hard to explain—which is making advances in white lead necessary. The cost of making this product has greatly increased, and there was nothing for it but to make an advance in the selling price.

That there will be any further change in the next fortnight, or three weeks, is unlikely. There seems no reason to expect a downward revision of prices after this date. Indeed, if the pig continues its present course, as seems quite likely another advance will almost certainly be made.

Paints Maintain Strength.

Paint.— The demand for the various lines is continuing remarkably. Despite their heavy early orders, and despite the delay in the opening of the paintseason —caused by the late wet spring—orders continue to crowd in. The retail demand for paint is splendid, partially due to the great amount of building which is being carried on, and partially due to the desire which people have to improve the appearance of their own homes.

Glass.—Here, as has been indicated, the situation is fairly serious. Stocks are none too large, and there is some doubt about future shipments. The handlers have not considered a price change recently, but though a drop often comes at this time of year it appears that such a change is rather unlikely at present. If there is a price change it will more likely be in an upward direction.

TORONTO.

Toronto, July 11. — The severe heat has had some effect on trade. Orders have not come in as briskly as would have been the case if the heat had been less trying, as the travelers have not been able to cover as much ground. The weather conditions affected retail trade as well.

However, trade has been brisker even with this handicap than is usual at this time of year. Manufacturers report that they are working at as high pressure as before, so it is presumed that they have not yet caught up fully with orders. Business is undoubtedly good in all lines.

Scarcity Continues.

White Lead.— The scarcity in white lead still obtains here. The jobbers report that the situation has not improved any as far as they are concerned. Stocks are still at rocky bottom and there does not seem much prospect of immediate relief. Filling orders is found to be difficult.

An advance of 25 cents in the price was declared at the end of last week. Word was received at the office of Hardware and Metal just as the paper was off the press; too late, therefore, for insertion. This makes the prevailing price here $7.80. Will it reach the $8 mark? The general opinion is that the commodity will be selling for $8 before very long. The continued scarcity and the unmistakeable evidences of a healthy demand seem to point that way.

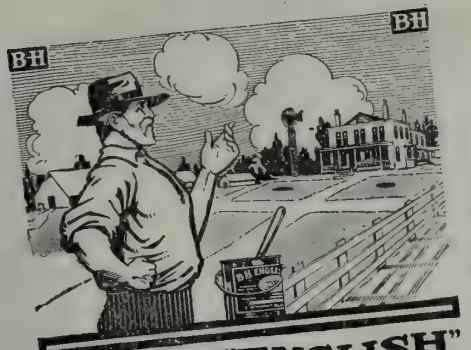
Linseed Oil.—The price of linseed oil has not been changed. It still sells at $1.08 for raw and $1.11 for boiled. It is said that demand has not been overly active for the past week. This may have been due to the extreme weather conditions.

Turpentine. — There have been no changes in the situation as regards turpentine. The price is still quoted here at 68 cents.

Glass.—The glass situation is causing some anxiety again. There can be no doubt that a deep unrest prevails in Belgium and importers are inclined to fear that trouble may ensue.

Predictions of higher prices are heard but whether anything of that nature will develop is still conjectural. It depends, of course, on the march of events in Belgium. If trouble ensues there, the natural consequence will be an advance in prices here.

Putty.—There are no changes in the price schedule. Demand is reported to be fairly good, with prices standing as follows:—Standard bulk in casks, $2.40; in 100-lb. drums, $2.55; in 25-lb. drums, $2.65; bladder in barrels, $2.80. Pure putty prices are as follows: Bulk in casks, $3; in 100-lb. drums, $3.40; in 25-lb. drums, $3.50; bladder in barrels, $3.40.



WINNIPEG.

Winnipeg, July 8.—A good sorting business is being carried on by travellers for wholesale houses, and rural retail business has been very satisfactory.

Paris green is now in demand, but supplies are reported as low and the price is liable to stiffen.

With the approach of haying, the demand for lubricating oils at country points is increasing and will be quite brisk from now on until the end of the threshing season.

In the city, there is no likelihood of any diminution in the volume of paints, oils and glass business until snow flies.

SAID THE FARMER.—"I never look for bargains in Paint—and I wouldn't buy cheap paint at any price. My time is worth money to me, so I use BRANDRAM-HENDERSON Limited, "ENGLISH" Paint wherever I have a job of painting to do. I find B-H "ENGLISH" Paint spreads easier than cheap paint—I can do my painting quicker with it and I find too that it holds its color longer—so I don't have to paint so often. All in all, therefore B-H "ENGLISH" is the cheapest of all the paints I have used." 88

Covers Canada From Coast To Coast

Brandram-Henderson, Limited, "English" Paint is 70% Pure White Lead—30% Pure White Zinc—mixed ready for use, with Pure Linseed Oil, Pure Turpentine and Dryer, and nothing else.

There is a B.-H. "English" Paint for every color you wish to paint. Ask for a sample card. 86

Said the Architect—"I have specified B-H ENGLISH PAINT because I have found it the best, and the cheapest in the end. It costs less to apply—covers more surface—protects better—and holds the color longer.

It is the 70% Pure White Lead and 30% Pure White Zinc Paint—an ideal formula.

Then, too, it is guaranteed by BRANDRAM-HENDERSON LIMITED—and the guarantee is printed on the can.

It is the kind of Paint for **your** house, sir. 77

SAID THE MAN WHO BUILDS.—"Yes sir, I am going to use Brandram-Henderson, Limited, "English" Paint. You don't suppose I would put so much good money in a new house and then paint with cheap paint. That would be absolutely wasteful, wouldn't it? I am building and painting for permanence—and B-H "English" Paint is the only paint I shall use. None but the best for mine. It wouldn't be fair to the house." 87

The paint with the guarantee. And the guarantee—signed by BRANDRAM-HENDERSON LIMITED—goes on every can.

50 shades, including black and white. 78

SAID THE HOME OWNER—"I told the contractor I wanted a first class job—and I insisted on his using BRANDRAM-HENDERSON, Limited, "ENGLISH" Paint. I knew that the perfect formula for color, spread, durability and economy was 70% B. B. White Lead and 30% Zinc White, and I knew too that I could get this formula only in BRANDRAM-HENDERSON, Limited, "ENGLISH" Paint. So I paid a fair price and I believe in B-H "ENGLISH" I got the best paint obtainable in Canada—in fact, the best obtainable anywhere or at any prices". 89

Here are some of the new series of newspaper ads—five inch double column—running in Canadian papers in the interest of Agents for B-H "ENGLISH" Paint.

Back of every can of B-H "ENGLISH" Paint which goes on the shelves in your store is an active force of reasonable, practical, effective selling-helps.

B-H "ENGLISH" Paint is 70% Pure White Lead—30% Pure White Zinc—100% Pure.

If there is no B-H "ENGLISH" Paint agent in your town write for agency proposition.

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.

announce that Western dealers can now secure their requirements of Minerva Paints and Paint Specialties with the least loss of time in transit and the lowest possible freight charges by ordering from the following points:—

WINNIPEG—Pinchin, Johnson & Co, (Canada) Ltd., 128 Princess St.

REGINA—Peart Bros. Hardware Co., Ltd., Distributors for Southern Saskatchewan.

SASKATOON—The Saskatoon Hardware Co., Ltd., Distributors for Northern Saskatchewan.

CALGARY—The Western Supply & Equipment Co., Ltd., Distributors for Southern Alberta.

EDMONTON—The Western Supply & Equipment Co., Ltd., Distributors for Northern Alberta.

VANCOUVER—Wm. N. O'Neil Co., Limited, Distributors for British Columbia.

(M-52)

Steel Tanks and Self-Measuring Pumps for Paint Oils

They avoid all the loss and inconvenience sustained under the old method. The steel tanks are air-tight and will not permit the oil to gum or stick. The pumps measure the oil according to the Imperial Standard, directly into the customer's can. They count the gallons pumped and compute the charge for fractional gallons.

THE BOWSER PAINT OIL SYSTEM

will put every cent of profit into your pocket, where it belongs. With a Bowser your paint oil department will be as clean and inviting as your shelf hardware department. It draws trade.

Why not investigate now and increase your paint oil profits. Your fellow merchants are using them. They'll help you. Ask for book No. 15.

S. F. BOWSER & COMPANY, INC., TORONTO
66-68 FRASER AVENUE

For Twenty-seven Years Manufacturers of Self-measuring Pumps, Tanks, Gasoline and Oil Storage Systems, Dry Cleaning Systems, etc.

JAMIESON'S VARNISHES

Have a reputation of over fifty years' standing which is envied by many.

To hold this reputation their quality has been maintained in the face of all competition. The wisdom of this policy being shown by the fact that their sales have grown up with Canada.

To-day these varnishes are made in our three plants by the most modern methods, under the most expert supervision, filtered and thoroughly aged in our extensive system of tanks.

The dealer who handles these varnishes has a reputation of over half a century back of him.

Think what this means to you.

ESTABLISHED 1858

Owning and Operating

P. D. Dods & Co., Limited

Montreal and Vancouver

MURESCO

30,000,000 POUNDS SOLD IN 1911

WHY?

BECAUSE

It covers more surface and covers it better with one coat than any other similar material on the market.

Of the nature of its ingredients it is highly sanitary.

It does not rub off, crack, peel, blister or show laps when properly applied.

It is so easily applied.

Every lot manufactured is carefully tested before shipping.

Send for Color Cards and Literature.

FACTS WORTH REMEMBERING

When you are selling varnish to your customers it is well to remember that you wish them to return to your store later on for further purchases with increased confidence,

DOUGALL VARNISH

on account of its good quality will make friends for you. There is no varnish made which is so hard to wear out—It is not a cheap varnish with the value in the label, but a good varnish with the quality inside the can.

Dealers take pride in handling DOUGALL VARNISH because they get to know of its sterling quality. It will please your customers and bring increased business to your store.

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

Each FORD Feature Means Money To YOU

Ford's Bit Extension is the newest, the best and the most practical ever made.

It combines the best points of other makes with several exclusive **Ford** features, the combination being an extension that has absolutely no equal on the market to-day.

Each feature is a time, labor and money saver to the purchaser, for the **Ford** does **more work better work** and accomplishes it easier and in less time than all former clumsy working extensions.

Each feature is a talking point —a strong selling argument and

EACH ONE CLINCHES A SALE

because of its superiority over the ordinary extensions.

Electricians are very enthusiastic over the **Ford**, and without exception pronounce it the first and only really practical extension ever produced.

It sells for the same price as inferior extensions, but the satisfaction it gives is ten-fold greater.

The demand is steadily increasing, as it becomes known it will be still greater. Are you prepared for your shares of the trade that's sure to come? If you have not stocked up with this new extension, we shall be pleased to send you advertising circulars, price lists and name of nearest jobber.

Chances for Business

In these days of prosperity large public buildings are constantly being planned in all parts of the country.

These are your chances for getting business.

Good air is a necessity in all buildings, but more especially in those built for public use.

The best way to get good air is by the use of our

J. W. HARRIS Ventilators

They have been tried all over Canada, and have never failed to give complete satisfaction.

St. John, N.B., Feb. 8th, 1909.

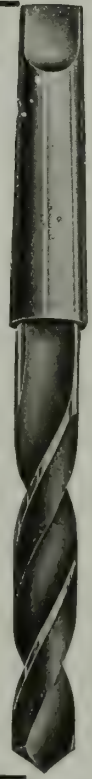
"Hercules" Drills Last Longer Between Grinds

Tools of Quality
TRADE
W B
MARK
Bear These Marks



THE drill that drills the longest periods, between trips to the grind stone, is the most economical drill to use. Of course, quality of output should hold place above quantity when making comparisons.

If you haven't used the "Hercules" you are still looking for a speed and quality drill.

"Hercules" High Speed Twist Drills retain the original toughness of High Percentage Vanadium High Speed Steel from which they are made by the twisting-while-hot-process. This method results in longer edge-holding and greater resistance to the strains of metals having different degrees of hardness.

No more tang troubles with the "Hercules" because the taper shanks, usually one size larger than regular, give the greater driving power, owing to the firm hold of the chuck which grips the drill in the centre.

If you are in for economy in your drilling department send to your nearest jobber for the drills with the "W. & B." Diamond Trade Mark stamped on the shank.

Stanley Tools

"BAILEY" IRON SPOKE SHAVES, a few numbers of which are herewith illustrated, are superior in style and finish to any others on the market.

The cutters are made from a high grade of steel, well tempered and sharpened, ready for use. The handles are japanned, and through each a hole is made to hang the tool up out of the way when not in use.

These Spoke Shaves are now being made in our Canadian factory.

STANDARD THE WORLD OVER

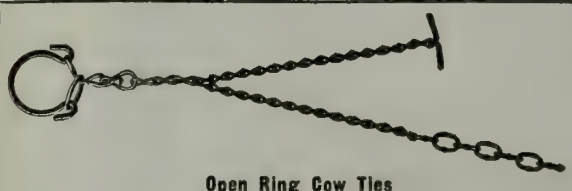
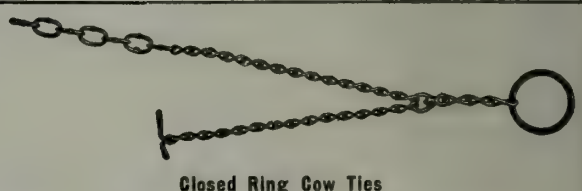
EVERY TOOL GUARANTEED

MAXWELL'S "FAVOURITE" CHURN



has been known and used for nearly twenty years, and has given such thorough satisfaction that more "Favourites" are sold annually in Canada, than all other makes combined.

Barrel is of best imported oak, finished in natural wood, with silver aluminum hoops, exceptionally large roller bearings, easy running and durable. The illustration shows the convenience of the combined hand and foot drive, and the lightness and strength of the angle iron frame, made in either single or Bow lever.



You are at a disadvantage if you do not sell Maxwell's Favourite

NOTICE THE TEETH
OF NICHOLSON-MADE FILES

They are all uniform in height. This is one of the features that makes them such rapid cutters. All teeth take hold of the work at once, and then, the steel used in every Nicholson-Made File is made up to our own strict specifications and differs in grade according to the purpose for which different files are to be used. And our machinery is designed especially to make the tooth in different Nicholson-Made Files the best shape for each different purpose.

These are the favorite Nicholson-Made lines in Canada

PERFECT MITRES
are always made with
THE LANGDON ACME MITRE BOX

When supplied with back saws fitted by ourselves, they are warranted to do perfect work.

QUICKLY ADJUSTED FOR ANY ANGLE. Some of the advantages over older models are :—In longer guides, which hold the saw steadier. These guides are provided with elevators to hold the saw stationary, when desired, above the work. In a graduated arc showing the various angles commonly used. In supporting guides, to hold the work in place. In an appliance for quicker adjustment of extension lever. In a length gauge for duplicate lengths.

These boxes are made in three sizes, and put up with varying sizes of saws, ranging from 22 x 14 in. to 30 x 5 in.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

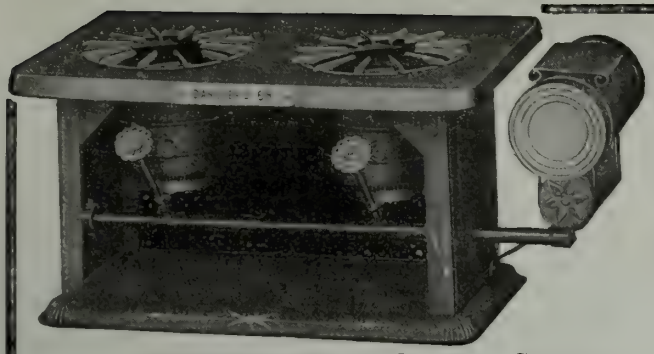
Does Your Mind Ever Feel Sluggish?

There are hundreds of patent medicines which claim to cure the sluggish mind.

It has been discovered by hundreds who are susceptive to this trouble, that the most successful and permanent cure is to join the sales force of MACLEAN'S MAGAZINE, and take subscriptions for this great monthly.

It gives relaxation from your regular routine of work. It is healthful, pleasant and educative. It develops you physically and mentally.

Hundreds of men and women are to-day earning $10.00, $12.00 and $15.00 per week during their spare hours, by taking subscriptions for MACLEAN'S MAGAZINE, who a year ago, some only six months ago, were wasting their valuable spare hours doing nothing.



Work never killed any man.

Taking subscriptions for MACLEAN'S MAGAZINE is pleasant, healthful work and pays you better than you think.

Join our organization now. Do not put off writing for full information to

You can talk across the continent for two cents per word with a Want Ad. in this paper.

Nature has solved the problem of distribution. It uses a multitude of agents to effect the distribution of its products.

Nature does not expect every seed to fall upon fallow ground and to take root. But, it achieves a profitable percentage upon its distribution. This is all that an advertiser has to do to reap a profitable harvest on his outlay.

Store Management—Complete

16 Full-Page Illustrations

272 Pages Bound in Cloth

ANOTHER NEW BOOK BY FRANK FARRINGTON

A Companion Book to **Retail Advertising Complete**

$1.00 POSTPAID

"Store Management—Complete" tells all about the management of a store so that not only the greatest sales but the largest profit may be realized.

THIRTEEN CHAPTERS

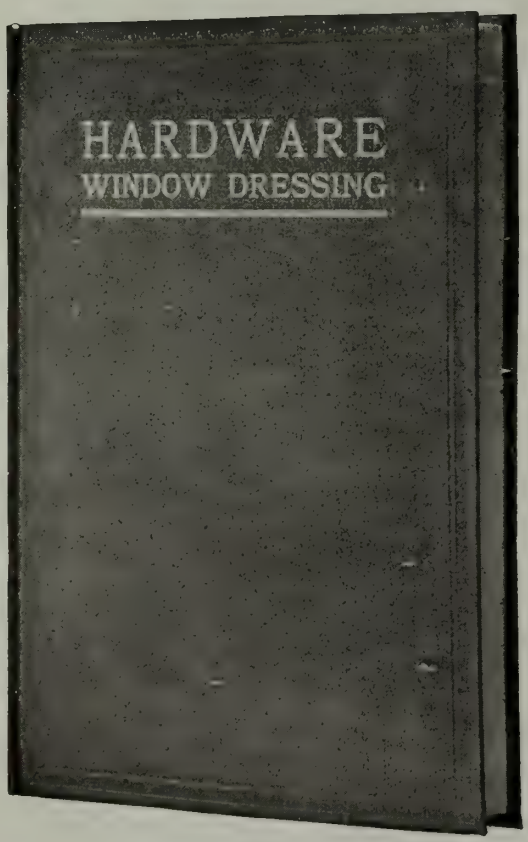
Here is a sample:

CHAPTER V.—**THE STORE POLICY**—What it should be to hold trade. The money-back plan. Taking back goods. Meeting cut rates. Selling remnants. Delivering goods. Substitution. Handling telephone calls. Courtesy. Rebating railroad fare. Courtesy to customers.

ABSOLUTELY NEW **JUST PUBLISHED**

Send us $1.00. Keep the book ten days and if it isn't worth the price return it and get your money back.

TECHNICAL BOOK DEPARTMENT
143-149 University Ave., - Toronto, Canada



Not an Enterprise for the "Quitter"

"If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom

"He must know before he begins it that he must spend money—lots of it.

"Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.

"Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

You May Become a Practical Window Dresser for $2.50

This is the first book ever written devoted exclusively to Hardware Window Display, and is a really new and good book. It is a practical, up-to-date collection of ideas of the most expert window dressers in the world. There are hundreds of displays in the book that can be put in at practically no expense—any one of them will bring enough extra trade to the store to pay for the book many times.

256 Pages **8x11 Inches** **300 Illustrations**

Price $2.50. (Payable in Advance)

55 St. Francois Xavier St. - Montreal, Can.

The Corona Roaster

YIELDS A GOOD PROFIT

Housewives appreciate this roaster because it is as easily kept clean as a dinner plate. The hard, glossy enamel cannot crack or chip off.

Can be used for roasting any kind of meats, and is fully adapted to meet the requirements of a perfect roaster. The double air jacket is all made of the one piece of steel.

WE HELP YOU MAKE SALES

by supplying advertising matter.

Don't miss a chance to procure this ideal trade winner. Let us send you a trial order. Full directions accompany each roaster.

We manufacture a big line of well-known Enameled steel ware in "Corona" and "White Star" and other Brands.

THE ROSS .280
HAS CAUSED A SENSATION

This rifle, which is a modification of the "Ross Match Rifle" which has created a furore in Great Britain, is shown by tests to be the hardest hitting rifle made.

In finish, only the highest priced English Rifles can be compared with it.

DEALERS HAVE AN OPPORTUNITY

to sell this high-class rifle which gives them a fair profit, and always makes a satisfied customer. If you have not any in stock write at once for discounts, etc.

YOUR customer may buy one from a RIVAL'S store.

ROSS RIFLE CO. - QUEBEC

ROBERTSON WOOD SCREWS
SOCKET HEAD

The hardwareman who is wide awake can make excellent profits by boosting this new wood screw.

The square hole, into which a specially made screwdriver fits, has become extremely popular with every user. With this the woodworker can do the work in less time and without danger of destroying the wood, as the screwdriver cannot slip.

We are also manufacturers of Hand Drivers, Yankee Bitt, Brace Bits, Rivets, Burrs, Washers, Nails, Wire, etc.

Write for catalogue and prices.

WEAR-EVER
NA ALUMINUM LTD
TRADE MARK

"Wear-Ever" Aluminum Ware

"No! They are not all the same."

"Wear-Ever" Aluminum Utensils *are different.*

Of course, aluminum is aluminum; but utensils may differ in thickness, in handles, in finish.

Thickness. They are made thick enough to prevent denting readily; thick enough to guarantee a lifetime of satisfactory service.

Handles. The handles of **"Wear-Ever"** utensils are made of the best tinned steel. Aluminum handles would become too hot—wooden handles would burn off or break. The handles of **"Wear-Ever"** utensils are gripped to the utensils by aluminum rivets with large heads. The heads are not sunk into the side of the utensil—the side remains of uniform thickness, strong enough to hold the handle on firmly for years.

Finish. The outside is polished. The inside is hardened by an electrical process which makes the metal harder, smoother, less liable to be discolored by food or water containing alkali or iron, and more easily cleaned than would be possible if the utensils were not so finished.

Replace utensils that wear out with utensils that "Wear-Ever"

A National Cash Register protects merchant, clerk and customer

It fixes responsibility. It eliminates losses and mistakes, prevents forgotten charges, and insures a record of money received on account and paid out.

It makes careless employes careful—it enables good employes to prove their efficiency.
Customers are protected against mistakes in their accounts. The receipt in the parcel, printed by the register, proves the amount paid.

When a National Cash Register enters a store, it becomes a better store—better for the proprietor, better for his employes and better for his customers.

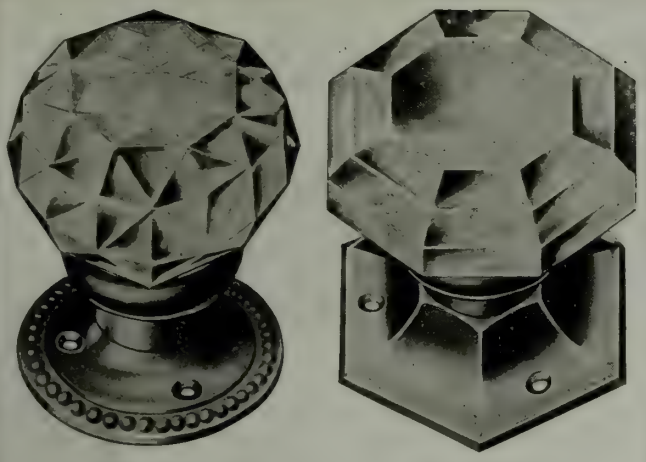
THE GILLETTE SAFETY RAZOR

Sells Outright—And "Stays Sold"

We do not authorize, nor do our dealers find it necessary to make, a 30 days' free trial offer of the GILLETTE SAFETY RAZOR. People want the GILLETTE badly enough to buy it from you outright—and to *pay the full price for it.*

Nor do we feature an offer to exchange GILLETTES or to refund the purchase price. Every razor that leaves our factory has been so skillfully made and so carefully inspected that you are seldom, if ever, called upon to apologize for, and exchange a defective GILLETTE. Every GILLETTE razor you sell gives such complete satisfaction that *the purchaser does not want his money back.* After he has enjoyed a few GILLETTE shaves, so quick, so cool, so comfortable, he wouldn't be without the razor for much more than the purchase price.

The GILLETTE is the ONLY Adjustable Razor. That is one reason why it sells best—and "stays sold."



The GILLETTE has long since passed the experimental stage, both in manufacture and in selling. It has become a *staple* as well as a specialty. Trial offers and "money-back" conditions are not necessary to stimulate demand, or to provide against half-expected dissatisfaction. When you sell a GILLETTE you *sell* it, at the full price and with a substantial profit—and it *stays sold.*

Which, think you, will create the most good will among your customers and give you the greatest satisfaction—razors which experience has proved must needs be placed on trial, or sold subject to a frequently-used return privilege—or the GILLETTE Safety Razor, which not only stays sold, but helps to sell others?

A New Line

"Yankee" Plain Screw Drivers

Strong, durable, well balanced tools, of the same high quality of material and workmanship as other "Yankee" Tools, which to-day are without equal.

The blade and ferrule are highly polished, the handle of hardwood, finished in dull black, making a handsome appearance.

Each tool is thoroughly tested and the blades positively guaranteed not to turn in the handle.

Your Jobber Will Supply You

No. 90, Standard Style, Fourteen Sizes, 2 to 30 in.

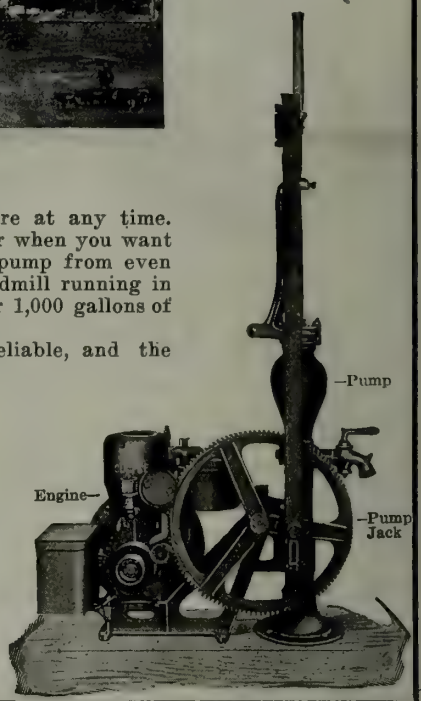
No. 95, Cabinet Style, (Slim Blade) Eleven Sizes, 2½ to 15½ in.

Made by

North Bros. Mfg. Co.

PHILADELPHIA, PA.

The "ECLIPSE" PUMPER



INCLUDES PUMP JACK AND GASOLINE ENGINE COMPLETE

EVERY UP-TO-DATE FARMER WILL BUY ONE

There is no longer any excuse for not having a good supply of water anywhere at any time. **The Eclipse Pumper** has been designed especially for this service, to pump water when you want it to, and at small expense. It is independent of wind or weather, and will pump from even the deepest wells—in fact, it will pump as much water as a 10 or 12-foot windmill running in a 20 mile wind. It uses about one pint of gasoline per hour. Think of it, over 1,000 gallons of water pumped against a head of over 80 feet on one pint of gasoline.
This pump should be sold by every dealer—th profits are consistent and reliable, and the demand is certain to increase.

Write for full particulars. **Keep one in stock.**

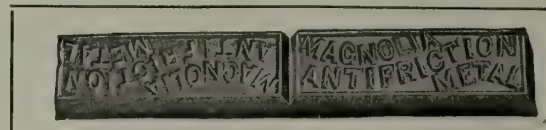
¶ Right in every hardware store is the most logical place for a line of reliable, accurate, and moderate-priced single guns.

For ridding premises of pests—snakes, rats, chucks and the many kinds of crop and poultry destroyers, the Harrington & Richardson single guns are specially suited.

¶ There is a large and growing demand for an economical and efficient weapon for just that purpose, as well as for occasional hunting.

Here's the gun:



Specifications, 12 to 28 gauge—26 to 32 inch barrel—ejecting or non-ejecting—fine black walnut stock—hard rubber butt plate—weight 5¾ to 6½ lbs., according to gauge and barrel. For black or smokeless powder.

¶ These guns are quick sellers. They are made and sold under the broad H. & R. guarantee of quality, reliability and satisfaction. With a few of these H. & R. guns in stock, the hardware dealer is equipped for a profitable and increasing trade.

Our 40-page catalogue is yours for the asking. It contains valuable selling points for every hardware dealer, and shows the complete H. & R. line. Ask for it now while you think of it.

Harrington & Richardson Arms Co., *716 Park Avenue, Worcester, Mass.*

GRIT

The special fitness and value of Magnolia Metal for bearings which are subject to **grit and dust** has always been most noticeable and is frequently commented upon by Engineers as shown in the following letters.

THE CLEVELAND TRINIDAD PAVING CO.
Cleveland, O., Branch Johnson City, Tenn., Dec. 15th, 1911.

Gentlemen:—
We have used "Magnolia" exclusively the past three years on the asphalt plants of this Company that have been in my charge in Oklahoma City, Muskogee, MacAlester, Emporia, Kansas and Johnson City, Tenn.
Have used it on Westinghouse, High Speed and other Engines, also on bearings that were subjected to much **sand and grit**, and find it the nearest to "perfect" of any anti-friction Metal.

Very truly,
CHAS. R. COOPER, Plant Supt.,
The Cleveland Trinidad Paving Co.

HOWARD TRUMBO, Contractor.
Key West, Fla., Nov. 23rd, 1910.

Dear Sirs:—
I have used MAGNOLIA METAL for the past 15 years, and found it satisfactory in every respect. Used it in thrust bearing, crank and cross-head bearing of the Steamer Bolivar; for the Union Bridge Co., and was on steamer for 18 months; when I left every bearing was O.K., and used it on several other steamers and tugs, also stationary work, and it gave perfect satisfaction. The last time I used Magnolia Metal was on the Hydraulic dredge Minikee, on the pump bearing, especially the bearing next to the pump, where **sand and grit** from the pump gets in, a stream of water is pumped next to bearing to keep **sand and grit** out or away from said bearing, and after 8 months' work this bearing was found in first-class condition, and started on another job last March, and it was still running when I left to take my present position with the Government, Quart. Master Dept., Key West, West Barracks, Fla.

Yours truly,
ALBERT DI NEGRO,
Chief Engineer, Ocean Steamer.

SPECIAL OFFER

PRACTICAL ENGINEER POCKET BOOK, 680 pages, over 2000 subjects. Price 40c. post paid. We do not aim to make a profit on these books. We buy them in large quantities as an advertising medium and give Engineers benefit of low price. They are highly spoken of by Engineers. Address Montreal office.

Sold by leading dealers everywhere or by

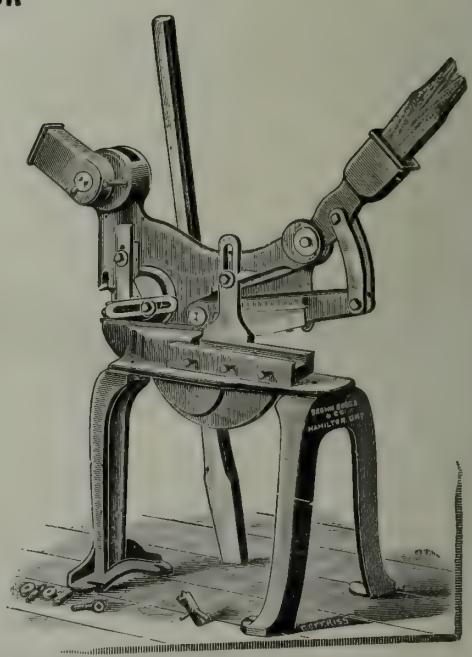
A Necessity to EVERY DEALER Who Handles Sheet Metal!

Our Combined Lever Punch and Slitting Shears



SAVE MUCH TIME AND LABOR

THIS is a machine that is constructed of the best material and made to stand years of hard service.

If you handle sheet metal and are not now using one of these machines you should install one at once. You will find it **indispensable after a trial.**

They slit any length or width of sheet required up to their capacity. Made in two sizes, viz.—Nos. 10 and 11. No. 10 will slit No. 12 gauge sheet iron, soft steel or bar iron 1/4″ x 2″ or 3/8″ round, and will punch a 5/16″ hole in 1/4″ iron or its equivalent in lighter metal.

No. 11 is the same as No. 10, only heavier and will cut No. 10 gauge sheet iron or punch a 3/8″ hole in 1/4″ iron.

Free If You Are Not Satisfied

The New Preston O. G. Square Bead Eavestroughing

We have always claimed that our eavestroughing was the best on the market, but we have gone ahead and gotten out something that is far superior to our old make. Now we can claim that we can't be beat when it comes to our eavestrough.

Some time ago we advised all the trade that we were manufacturing O. G. Square Bead eavestroughing by machinery which assured absolute uniformity in shape, but it developed that our machinery was not heavy enough to produce as sharp a bead as we desired. We have now perfected and patented automatic steel dies to fit our large power press and we now guarantee a trough superior in shape, appearance and fit to any other on the market.

You can save time and solder in the erection of this eavetrough FOR EVERY PIECE IS EXACTLY THE SAME and fits snug and tight. There are more profits for you and more satisfaction if you use our make. See our special offer below and take advantage of it at once.

Cut out this ad. and mail it to us to-day with your order for 250 feet of our new O. G. S. B. Eavestrough and if it is not exactly as we represent it we will make you a present of it. This offer is good for thirty days.

Planning and Arranging the New Store

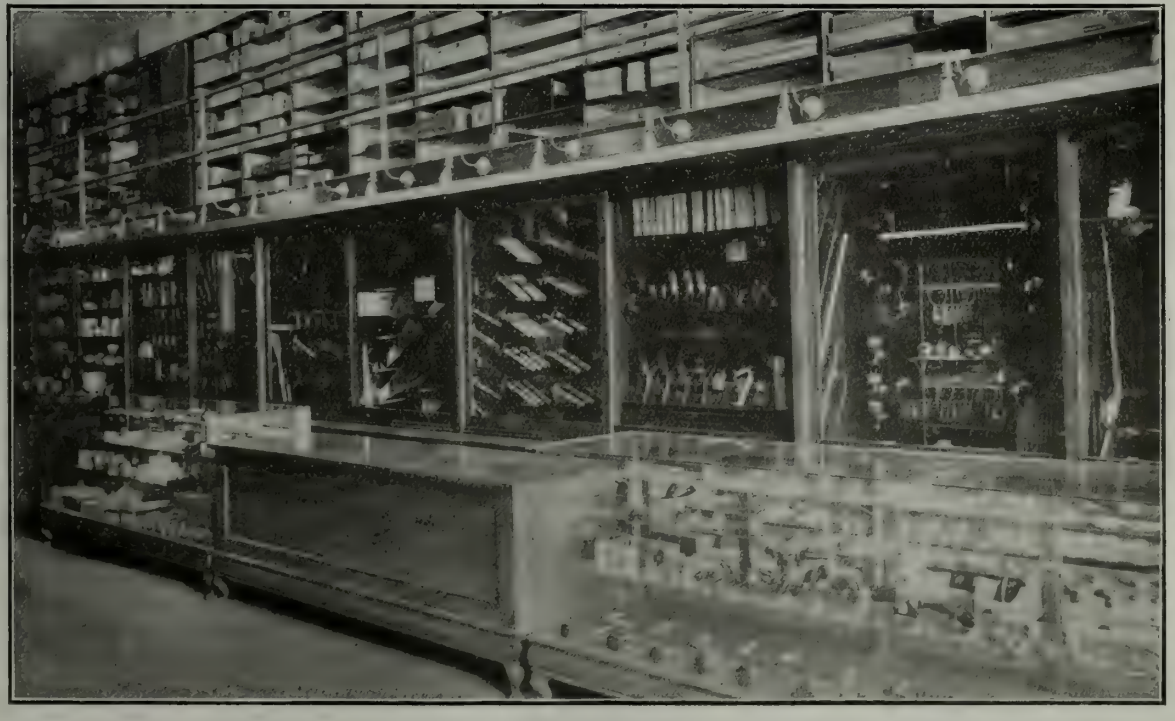
In Opening a New Establishment, the Dealer Endeavors to Avoid the Mistakes He Has Seen in Other Stores and Emulate the Good Points—The Arrangements Made in a New Montreal Store—Windows are in U Shape — Original Methods of Interior Display—Mezzanine Floor Gives Additional Space.

Written for Hardware and Metal by Hector A. Bernier, manager of the Bernier Hardware Co., Montreal.

Opening a new store, I think, is about the hardest work a hardware man can undertake. Stock-taking is not a summer vacation, and there are other tasks in the year's work which demand close attention; but opening a new store seems to me the hardest undertaking of all. A man expects so much of himself at such a time. He hopes that in this new establishment he will be able to overcome all the bad features he has noticed in the stores with which he has formerly been connected. He hopes that he will be able to embody the good features which he has noticed in other places of businsss. Indeed he hopes to make his store a model, and it disappoints him greatly when he finds obstacles in the way. However, there is little to be gained by lamenting over aims which have been found unattainable. It will be better to tell what has been done, by way of making a store which will be a good one in which to carry on business.

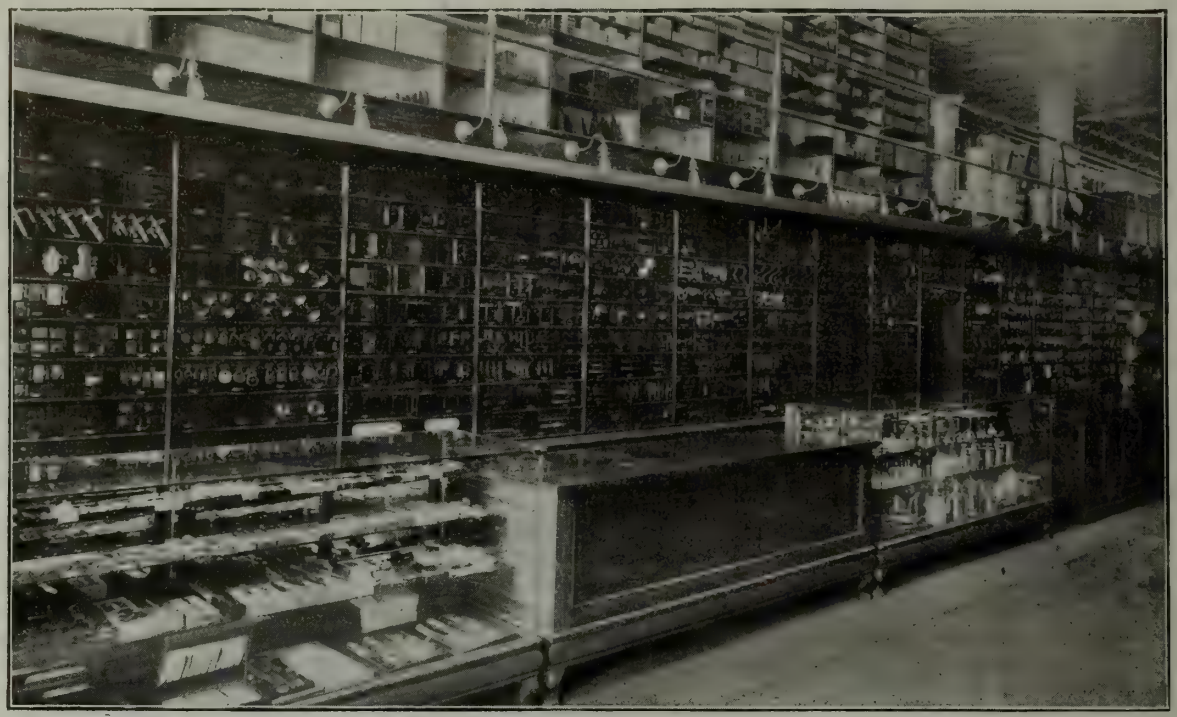
Aims Kept in View.

I have had several aims in preparing this place for occupation. I wanted to make it different from other stores, so that it would demand some attention from all passing by. I wanted to have plenty of room for display, so that the goods carried might be shown in a manner which would draw comment and bring sales. I wanted to have the whole store interior so arranged that it would enable the clerks to give quick service—which, I have noticed, has as much to do as anything else in making a store popular. To accomplish all those aims at once is not easy, but we have done a good deal in this direction, and hope to do more as the months go by.



Benefit of Wide Entrance.

When it became neccessary to remodel the store before opening for business. we determined to start at the very outside, for only by such action could we secure the desired distinctiveness. We made the front entirely of glass. Then we so shaped the windows, in the form of a "U," that a wide doorway was given without detracting at all from the size of the windows. People stand in that wide entrance to escape the sun. They run to it to escape the rain. And always they look at the window displays —which of course is what window displays are for. We can show a wide range of goods in these windows, and this I find of great advantage.



Something for All.

A public speaker, you know, in preparing an address, thinks not only of what he has to say, but of the class of people to whom he is to say it. He frames his remarks to suit his audience. Now the show window is the speaker of the hardware store, and it has to utter not only a good message, but a message appropriate to its audience. Situated as we are, we get a cosmopolitan custom. People of at least three races, and of many stations, pass. I have found it wise. therefore, to have something in the trims to appeal to all of these, and for that reason the large windows are of great value. They have, indeed, proved their worth in the short time our store has been open.

Inside the store we have attempted to do much the same as we have done out

The right hand side of the Bernier Hardware Co. store, showing an arrangement of tools which could hardly be improved upon.

One side of the Bernier Hardware Company store, showing some of the silent salesmen, the sampling of the shelf hardware lines, and a part of the Mezzinine story in the distance.

side—provide for the display of a wide range of goods. To me the method of showing tools and cutlery in glass wall cabinets has always seemed the best. When we planned opening this store, therefore, I planned to have a number of such glass wall cabinets. These meet practically every requirement. They show a maximum number of samples with a minimum amount of room. They keep the samples free from dirt and rust. They brighten the whole appearance of the store, and give it that look of neatness which is attractive to everyone, and which makes people feel that they are dealing in a place where they will get the best service.

Along one side of the store we have eight of these glass fronted cabinets. In the first one we are now showing fire arms, in the second bathroom equipment —a line which has proved exceedingly profitable this summer. Then there are behind the glass, saws, planes, hammers, bits, butchers' cutlery and table cutlery. The samples show splendidly, and though we are required to slide open the glass doors almost hourly, in order to show a customer some article, the cases do not get out of order, for the articles moved have each a place, and are immediately put back.

A Wise Arrangement.

The stocks, of which these goods are the samples, are as a general rule kept on shelves reached by the gallery. An exception, however, is made in the case of the butchers' cutlery. Only a few inches depth is needed to enable samples of these being shown behind the glass. The other cabinets are perhaps a foot deep. To preserve the uniformity this had to be made the same size, but we conserved space by arranging the display of knives on two green baize doors, which, when the glass sliding doors are open, themselves swing out, showing the stock behind.

We had several ideas in arranging the shallow galleries on each side of the store. To begin with, this enables a greater stock to be kept. Our ceilings are high, and if we had not these galleries it would be necessary to have long ladders with which to reach our reserve stock.

A clerk can quickly go up to them to secure any article which may be desired—though we have enough reserve stock down stairs to satisfy any ordinary demand. Moreover, these galleries give another opportunity for display. We are going to use them quite extensivley for placards telling about our goods—placards such as many manufacturers are now sending out. Such signs, I know, help to brighten the store, and they also help to give the patrons confidence in the goods carried.

These narrow galleries run off at the back of the store into a mezzanine story of considerable size. The front of this we are using as our office. It is an ideal situation for this, being quiet, and enabling me to see what is going on below. If I see the clerks have more to do than they can accomplish, I go down to help them. I can see well nigh everything that is going on.

The great part of this mezzanine story we are using to show kitchenware and hotel kitchen equipment. This last line requires a good deal of space, but we have the room to give, and as the line pays well we have adopted it. There is little competition, and a sale once made is likely to bring others.

I notice that a number of dealers are doing away with the counter in their stores. I can see what they hope to accomplish by this, but in our store I think counters are of value. We are reducing these to a minimum, however, substituti for them silent salesmen which enable the attractive display of attractive lines.

Uses of the Counter.

But there we sell a large number of tools, among others some heavy ones. We have a good trade with carpenters and contractors, and we have found these men like to lay the tools down upon the counter. The glass top of a silent

Making Room for the Fall Stock

The Advisability of Conducting Midsummer Sales to Clear Out Surplus Summer Stocks discussed—The success Achieved by Thornton Bros., Bradford—A Large Stock Disposed of in Two Week's Time.

A rapid turnover is what every hardwareman desires. The coming and going of customers, the musical clank of the cash register, the rapid transfer of goods from shelf to purchaser; these are the things that most please the merchant. The faster the turn-over, the larger the profit is at the end of the year, and the bigger opportunity the dealer has to improve his methods and widen the scope of his business.

There are a good many things which help to improve the turnover; attractive store premises, courteous service, the handling of best quality goods. One of the most important, however, is success in keeping the stock new and thoroughly seasonable. Nothing is more detrimental to business than the presence in the store of old and palpably shopworn stock. Let the flotsam and jetsam of the trade of past seasons collect on the shelves and on counter corners and the result will be a gradually slackening up all around. The business has to carry all this unsalable junk and its course is impeded as the natural result.

The worst feature is that the accumulation of old stock is just as sure and as rapid as compound interest. If the store contains a certain amount of unsalable material, more will collect; probably for the same reason that one fly attracts more flies.

It pays the hardwareman, therefore, to keep down these seemingly unavoidable accumulations of old stock by rigid measures. Many dealers, who are on general principles sincere believers in the one-price policy, are so convinced of the danger of keeping old stock on their hands that they hold clearing sales whenever they find that the necessity has arisen. They believe it is better to sell the goods at a smaller profit than to keep them so long that nothing is realized in the end, that it is better, even, to suffer an actual loss than to prejudice the disposal of the rest of the stock. In the opinion of the writer, they are fully justified in this opinion.

The course of each year is marked by the coming and going of certain well-defined selling seasons. Each season is succeeded by periods, more or less brief, of comparative depression. It is during these "off seasons" that clearing sales should be held.

At the present time, the hardwareman should make sure that he is not going to find himself loaded up with summer goods when the demand for the same ceases. People who are going to buy screen doors this summer have, except in rare cases, already done so. The bulk of the business has been done in similar lines. On the other hand, the demand is growing in harvest tools, preserving kettles, binder twine. Demand is veering with the advance of the season. It is time, therefore, for the dealer to see that he is not going to be compelled to carry over a stock of summer goods.

Hold Midsummer Sale.

There is an additional reason why a midsummer sale should be held. The fall is a busy season in the hardware store, particularly in the stove department. A rearrangement of the stock is necessary. If the dealer has to give room to a lot of left-over summer goods, he cannot display his fall stock to the fullest advantage.

Clear the decks for action by disposing of what is left of the summer stock before it is necessary to bring the fall goods forward.

Cleared Out Stock.

As an example of the good results which can be obtained with midsummer sales, the experience of Thornton Bros., Bradford, Ontario, is significant.

Late in June Thorton Bros. decided to hold a big sale and fixed the opening date for Friday, June 28. Their reasons for holding the sale were as stated, on general lines, above. In their advertising matter they declared that they were "going to add several new lines of merchandise and must clear out all the summer stock to make room for the new goods."

The sale was advertised in full page space in the local papers, and preparations for the big event were made on a wholesale scale. The goods to be sold were moved to the front. Price tags were used, each article on sale being priced in large figures.

Small Articles Featured.

Thornton Bros. have made a feature of counters for the sale of articles variously priced from 5 cents to 25. To quote W. H. Thornton, this has been "the best feature of the store." These counters were heaped up with small articles for the sale and the greatest interest centered around them.

A Cash Sale.

Reductions were offered on all lines, but spot cash was demanded. The firm are gradually working over to the cash system. They are convinced that it is the best method of conducting business, but believe that it is wiser to effect the change by degrees than to do so at one stroke. However, in a sale of this kind, they impose a rigid cash provision and have no difficulty in securing the money.

Among the goods placed on sale were screen doors, screen door hinges, screen windows, spray pumps, oil stoves, gasoline stoves, hay fork outfits, lawn mowers, paint oil, paris green, egg baskets, hay forks, galvanized pails, chicken fence rolls, hay forks, and countless articles of a small nature. A stock of approximately $15,000 was placed on sale.

Speedily Cleared Out.

And now for the results. It had been intended to continue the sale for three weeks, but it "caught on" to such an extent that the stock was practically cleared out in two week's time! There was a steady demand during that period. The store was kept open every evening during the fortnight, except on Thursdays, a half-holiday being observed on that day in Bradford. At the end of the two weeks the sale was declared over and the special prices offered were withdrawn. It had been a huge and unprecedented success.

Other firms are meeting with equal success, not only in midsummer sales, but in the holding of clearing sales at other seasons of the year. When properly and conservatively conducted, they are found to be not only expedient, but profitable. There is no reason why a reasonable profit cannot be made on all goods disposed of.

BIG HARDWARE STOCK.

Sacramento, July 8.—An official report of an operation performed upon Miss Letitia Miller of San Rafael, for the removal of 1,097 articles, mostly metal, from her stomach, says she is on the road to recovery. The report was filed with the State Board of Control. These articles were removed:

One hundred and eight wire hairpins, 55 open safety pins, 21 broken pins, 5 prune seeds, 23 buttons, three collar buttons, 13 nails, three screw eyes, 40 tacks, one staple an inch long, five parts of teaspoons, 425 broken pieces of hairpins, one piece of string, one piece of thread, 104 unidentified odds and ends, mostly metal, nine parts of combs and 280 small pins.

SECURE EARLY SHIPMENTS.

Stove manufacturers report that the majority of retail dealers are placing their orders for fall stocks early this year, but that they still exhibit the same reluctance to receiving early shipments. In view of the circumstances, this course is not wise. There are good reasons, undoubtedly, for the desire of the dealers to postpone shipments until such time as the stock will be actually needed, lack of store room being the foremost; but there are still greater reasons for stipulating early, if not immediate, shipment.

The transportation problem is a serious one at the present time. The railway companies have not the facilities to handle promptly the traffic which comes to them. Shipments are very much delayed as a result. From present indications, the fall trade in stoves is going to break all established records and this will mean congestion. Dealers, who do not get their stocks in early, will have to wait later, possibly at a time when delay means loss of business. Certainly this is one occasion when it will pay the hardwareman to "order early shipments and avoid the rush." With the goods shipped now and dated September 1, the only problem facing the dealer would be the housing of his stock until such time as harvest tools and other summer lines are disposed of.

THE TROUBLE WITH PARIS GREEN.

According to the song, men want what they want when they want it. Also, it might be added, they want what they want the way they want it. Which, as is shown by the present condition of the paris green market, means that they must order well in advance.

Paris green is scarce at present, but it can be supplied. The trouble is that it cannot be supplied in the way which many desire. The makers have little to go upon in preparing their stock. They can figure that the dealers will call for their supply in much the same form as they did the previous year. But the best made plans of mice and men—you know—gang aft agley. It was so with this plan this year. Last season dealers ordered a great part of their paris green in 50 pound drums. This year they are seeking delivery in one pound tins.

The orders for paris green, are, of course, largely placed in the fall. But at that season, those ordering merely mention the quantity wanted, saying they will specify how they want it later on. This was the procedure this year. The manufacturers could not get early advice, so, when the heavy ordering for tins came in—an unprecedented ordering—the stock was not on hand to fill it. Moreover, the intense heat made it impossible to fill tins, as this menaced the health of the workmen. As a result, dealers will have to take a good part of their paris green in a form which is not exactly what they want. Those who mentioned early not only what quantity they wanted, but also how they wanted it, of course got their supply.

STIMULATING SUMMER BUSINESS.

A lazy man can always find excuses to explain away his lack of energy. Sometimes he finds an excuse ready made, an excuse which has been generally accepted as a fact, even by men of more energetic mold. Such an excuse is the Summer Slump Myth, the barrier behind which men, who do not care to work in warm weather, find a convenient hiding place.

The salesman who does not care to hustle for orders when the heat is such that work spells discomfort, explains his failure to secure orders on the ground that, "You can't sell goods in the middle of summer." The merchant who feels inclined to comfortably let things slide, applies the same excuse as a sop to his conscience.

Undoubtedly the warm weather does create among the people, the ultimate consumers, an inclination to let things slide, and to postpone shopping, among other things. This should be accepted as a signal for the merchant to go after business a little harder to offset the increased indifference of the consumer rather than an excuse for extended loafing. He should figure that it is better to combat the lazy germ in customers rather than to encourage its spread by letting it grow on himself.

Speaking in all due seriousness, there is no reason why business cannot be made quite as good in summer as it is at other seasons, if the merchant features the right class of goods. A discerning campaign will bring results in the dog days just as surely as at times when weather conditions are more favorable.

SCARCITY IN METALS.

The scarcity in metals is becoming more pronounced all the time. Shortages are developing all along the line, and although no crisis has yet been reached, it is apparent that the situation is not reassuring.

Getting down to the root of the matter, it is apparent that the consumption, in this country, and in all others as well, has largely increased. Although varying conditions and manipulation are accepted as reasons for some shortages, the growth of consumption is the cause underlying all.

In many lines, consumption is no longer traveling in double harness with production. It is forging ahead. Under the circumstances, predictions are freely and confidently made that prices will go higher. This, of course, would have the inevitable effect on the prices of goods into the manufacture of which metals enter.

POINTED EDITORIALS.

The days of the turpentine dopester are numbered.

* * *

Remember that a really good clerk is working for himself as well as for you.

* * *

Watch for next week's issue. It will contain many articles of particular interest.

Swatting the fly may be cruel from the fly's standpoint, but it is humanitarian from man's.

* * *

The iconoclast is never a good salesman. Criticism of the opposition does not make sales.

* * *

The model store is hard to find, but that of the Bernier Hardware Co., illustrated in this issue, comes close to the mark.

* * *

John D.'s indebtedness, by the way, is for buns. Many men have got deeper involved than this over a single "bun."

* * *

The paint campaign should begin with the exterior of the store. From the standpoint of the hardware dealer, paint parsimony is poor policy.

* * *

Clear the decks for action. It will not do to devote all the space in the store to summer goods when fall business is looming up "in the offing."

* * *

This kind of weather makes the most aggressive men feel they would rather whip a trout fly through the alders than close a sale. The holiday germ is in the blood.

* * *

John D. Rockefeller is named debtor to the extent of 56 cents by a confectionery firm which has just failed. It is not likely this reverse to John D. will cause a general advance in oil.

* * *

Toronto hardwareman reports the sale of two dozen pairs of roller skates in two weeks. Some of the dealers who read this note have probably never even considered handling roller skates.

* * *

With Parcels Post dangerously close, the United States hardwareman finds the problem of distribution in the trade a most serious one. Undoubtedly, a crisis is near at hand on the other side of the line.

* * *

Men will sometimes flout facts and hug delusions. Which accounts for the faith most men pin to that mischievous old delusion, the Summer Slump Myth. Just about time it was banished for good and all.

* * *

Do you distribute your cost of doing business over all goods equally or according to the nature of each line and the position allotted in the store? This question is dealt with in next week's issue of Hardware and Metal.

* * *

American hardwaremen complain that as many as fourteen jobbers' salesmen call on them every week. It is hard on the retailer, but also hard on the traveler. Who would care to occupy the shoes of the fourteenth man around?

* * *

When a team does not trot evenly, there is usually trouble for the occupants of the vehicle. Metal production and metal consumption are not making even progress any more. Consumption is getting too skittish for production. What will be the result?

* * *

Conditions in Canada differ radically in many respects from what is found in the United States. It is not advisable, therefore, to reach the conclusion that what goes on there is going on here also. This is particularly true of the hardware trade, where American and Canadian conditions are widely divergent.

One Hundred Years Ago

THE human mind has a distinct turn toward reminiscence and nothing interests us more than records and anecdotes of the misty past. We are all antiquarians more or less. Hardwaremen will, therefore, evince a healthy interest in records dealing with retail ironmongery of so remote a date as 1812.

One hundred years ago hardware shops in Canada were undoubtedly few and far between. As far as we know there are not any firms in the Dominion to-day which date that far back. In the Old Country, however, there are many hardware concerns which have been doing business at the same stand for longer periods than a century. In dealing with the centenary of one of these, Lowdell, Cooper & Co., Lewes, Sussex, the Ironmonger gives some information relative to trade conditions in the early years of the nineteenth century.

The typical store of that date was different from the store of to-day. Our forbears had not learned to appreciate the value of displaying goods. Their windows were small with heavily leaded panes. There was seldom anything on the outside to indicate the nature of the stock carried within, unless it were a sign of a distinctly general description—a midshipman for a ship chandler's shop, say, or a large pair of spectacles to denote the optician. The store of Lowdell, Cooper & Co. in 1812 was a heavy, stone-front building, looking more like a grammar school than a "hive of commerce." Over the door was the single word, "Lowdell."

The old books of the original proprietors are full of quaint entries and records which throw light on the nature of the business transacted by the ironmonger of 1812 and the kind of stock he carried. There is, for instance, an entry against a Mr. Soper of Enfield for one dozen jockey combs. Perhaps some reader can tell us what a "jockey comb" was. Can it be that race track etiquette in those days, when horse racing was at its prime, was so severe that the jockey had to be currycombed as well as his mount? A farmer is charged with a dozen iron spoons. Aesthetic tastes, apparently, had not been so highly cultivated in those early years. One curious entry refers to "three double keys neat" and this is interpreted in modern terms as "blanks." Some men still drink their whiskey neat—though not, if records can be trusted, with the staying power that distinguished the late-Georgian bibster—but "keys neat," as a term, has lost all significance. An entry against one Mr. Markwick, of Chailey, includes such goods as cut brass, glue, glasspaper, bed sacking and bed cord. Can any bright clerk explain offhand each one of these items? Referring to still another entry, The Ironmonger says: "Those were the days when papier-mache trays were in vogue. For July 13, 1812, there is a record of two sales to a Mr. Tourle, of Swanborough (though the name was spelt 'Swanburgh' in those days), of a 32-inch tray and a 22-inch waiter with a hare and greyhound centre. Evidently a big size and a sporting picture appealed to the purchaser." The times have not changed in that respect.

However, one must not run away with the idea that the Georgian tradesman was slow. He was already feeling his way toward business "short cuts" and spelling reform. Business entries spell tacks "t-a-x." One clerk, apparently of a facetious turn of mind, went so far as to enter up a pudding mould as one "blamonge."

Business was not transacted with the rush that characterizes everything to-day. The traveler or "bagman" made his rounds by stage coach or in his own chaise.

Start the Fall Stove Campaign Early

A Record Trade is in Sight and Dealers Should Make Every Effort to Prepare for it Well in Advance—The Advantages of Constructive Salesmanship—Using the Tinshop as an Adjunct—Get Out After the Furnace Trade.

Written for Hardware and Metal by an Ontario Stove Dealer.

The stove trade and everything relating thereto should be given more serious consideration by the hardwareman this fall than ever before. The demand is going to be greater than ever. Present indications all point to a record trade.

This assertion is based on facts. There has been an unprecedented activity in building operations in all parts of the country and naturally enough the activity has spread to every industry and is felt in all directions. The stove trade up to the present time has reflected this activity to a marked degree. There have been heavy sales and, what is more to the point, a steady undercurrent of enquiry, pointing to a certain demand in the fall. The possibilities of fall trade are big indeed.

The past season has been a record one for gas stoves. People who have never been able to boast a gas stove before, have been investing. Once a luxury, to be found only in the homes of the well-to-do the gas stove has become a necessity. The kitchen in the average home to-day boasts both coal and gas range. This is an economical measure in reality. Gas is cheaper to-day and can be used for cooking at a comparatively small expenditure.

The largely increased demand for gas stoves has not hurt the coal range trade. The gas stove serves as an "auxiliary plant." In fact the range trade will be bigger than ever this fall. People are showing more of a tendency to buy the best grades. They are realizing that a cheap purchase is poor economy and are more ready to lay out a larger sum at the start with the certainty of getting it back one hundredfold in increased comfort and length of service.

Start in Early.

With such rosy prospects for the fall trade, dealers should see to it that they are well prepared. The demand is going to be of such substantial proportions that the dealer cannot hope to cope with it to his own and his customers' satisfaction unless he prepares himself ahead of time. It will not be possible to leave everything until the last moment this year.

When you come to think of it, an early start is the main consideration in most things. The athlete who lingers on the starting line is never in front at the tape. The man who gets down early to his office or store is the one who works up the biggest business.

The stove dealer must start early because he has a great deal of opposition to contend with. The mail-order houses are always "on the job." The local dealer cannot sit back and take it easy if he wants to keep the trade in his section out of the claws of the catalogue house.

A more important reason still, however, is that business in stoves must be worked up carefully and patiently. People do not rush off to buy stoves on the spur of the moment. If a woman needs a new kettle, she goes right down to the hardware store and buys it. If a man wants a hammer, he buys it at once. But if a certain family decide that they need a new heater or range, they think the matter over carefully, consult their bank book, read advertisements, study stove literature and, generally speaking, go into the matter very carefully. Their interest begins probably a month or more before the time when they actually make the purchase. It follows, then, that the families who will buy stoves in the fall are at the present time beginning to take an interest in the subject. The dealer who can engage their attention now by his aggressiveness is most likely to secure them as customers when they finally decide to act.

Constructive Salesmanship.

Selling a stove is a hard proposition. The purchaser knows that he must pay a big sum of money and he has to be convinced on every point. You have to show him that a cheap stove is a poor investment, you have—in many cases, at least—to get him away from the mail order idea, you have to demonstrate the good points of your stove. Stove salesmanship is a study.

There are, roughly speaking, two classes of stove salesmen—the constructive and the destructive. The latter is the blustery, bombastic sort of fellow who directs all his arguments to showing the bad points of other makes of stoves. He deals in comparisons. Instead of showing that his stove is the very one for the customer, he tries to prove that it is better than the stoves of the dealer over the way. This class of salesman is generally a master of what might be termed "glittering generalities." He makes sweeping assertions and claims a degree of perfection, amounting to infallibility, for his stove but does not back up his claims with the necessary facts.

The constructive salesman is by long odds the better man of the two. He avoids comparisons and devotes his time to explaining fully the good points of the stove he is demonstrating. He makes his explanations practical and convincing. If pressed, he will refer to the opposition but never in a disparaging way. He will even acknowledge that the other dealer carries a good make of stoves; not as good as his own, of course. This style of salesmanship is just what our term implies—it is constructive. It has the ring of sincerity which the other lacks. People can be convinced by a constructive line of argument but the destructive kind of talk often has the opposite effect.

Yes, the main thing about selling a stove is to know the stove, to understand it from top to bottom, through and through. The man who wants to become proficient should devote his time to studying the questions of stove construction and operation to collecting information on all points.

Tinning Work and Stoves.

Hardware dealers have shown a tendency of late to discuss the value of the tinshop. Wonder if they ever stopped to consider the worth of the tinning department as an adjunct to their stove trade? It certainly helps to bring along business.

In the first place, the dealer who has a tinning department can give better service. He has practical men to instal the stoves sold and to see that they work

IN A NUTSHELL.

Present indications point to a record fall stove trade.

Once a luxury, the gas stove has become a necessity.

The local dealer cannot sit back if he wants to keep trade out of the claws of the catalogue house.

People can be convinced by a constructive line of argument but the destructive kind of talk often has the opposite effect.

Warm-air heating is here to stay. It is gaining in popularity all the time.

properly. In cases of complaint, he can give prompt attention.

Then look at the business which can be brought in. The tinsmith has a splendid opportunity to pick up information and tips which are invaluable to the stove salesman. He goes from house to house repairing eavetroughing, putting up stove pipes, and so on and he is thus in a position to find out where stoves are needed. The tinsmith who keeps his eyes open can keep his employer supplied with a list of live stove prospects.

Experience has taught that business in stoves and tinning work runs parallel. If business is brisk in one, it is brisk in the other.

Feature the Furnace.

Does the average hardwareman appreciate to the fullest extent, the importance of the furnace? Some will tell you that the hot-water and steam-heat-plants are replacing the furnace entirely. How is it, then, that more furnaces are being made and sold than ever before?

The man who builds a house worth $4,000 or upwards probably has a steam or hot water plant installed. But what percentage of the houses built to-day cost that much? The percentage is very small indeed. The majority of houses run about $1,700 to $2,500 and the furnace is the ideal method of heating for homes of that size.

Warm-air heating is here to stay. It is gaining in popularity all the time. Make no mistake on that score.

Some of the Advantages.

The furnace has many advantages all its own. It heats the house well at a minimum cost. It is easily operated. It provides humidity. It does not use up floor space in all the rooms as in the case of other heating installations.

All these are prime talking points. Make good use of them, Mr. Dealer.

Now is the Time.

The furnace trade is important enough to justify a display of energy, even to the extent of going out after business.

Houses are in course of construction. They have not yet, in a majority of cases, reached the point where the heating apparatus has been installed. It would pay the hardware dealer to get out now and call on the architects, builders and owners. Furnaces will be installed in a great many of these homes but they should be put into a lot more which will otherwise be provided for in another way. Get your talking points well fixed in mind and proceed to bombard the owners and architects. The furnace is a good "talking proposition" for the dealer who makes use of the facts at his disposal.

The First of the Campaign.

To hark back to the beginning, the fall campaign should start at once. In the opinion of the writer, the dealer should start such work, as may be termed educational, now. He should have his stove stock where it can be seen and he should make sure that it is seen to advantage. In other words, the stoves should be looking their best. A window display or two and some newspaper advertising will be found resultful. Immediate results may not be obtained but the good will manifest itself later in the season.

The dealer should begin also, to get his lines out for "probables." Careful sounding will provide him with a list of people who are likely to purchase stoves this fall. He can then proceed to "concentrate" on them, sending out literature and perhaps even making personal calls.

Standard of Purity for Turpentine Set

It Has Been Brought Under Act Respecting the Adulteration of Food—Must be Free From Mineral Oil—Act Will Allow of Prosecution for Adulteration.

Canada now has a standard of purity for turpentine which will allow of prosecution for adulteration. Hitherto there has been no standard set by law, and it is alleged that a great deal of turpentine has been sold by unscrupulous firms which did not measure up to the mark recognized by most reliable dealers or that now established by law.

In fact, the last circular on turpentine issued by Inland Revenue Department, in July, 1910, showed a great many samples to contain petroleum, which would mean adulteration under the new act, which says that it must be entirely free from mineral oil.

Since the inspection of samples in 1910, it has been felt that a standard was necessary to protect purchasers, resulting in the addition of turpentine to the act respecting adulteration of food and other articles, and defining it as follows:

I. When turpentine is sold as a drug, for medicinal purposes or to the order of a physician, it shall meet pharmacopoeial requirements as provided by section 7 of the said act.

II. When turpentine is sold under any other conditions than for purposes of medicine, as above, it shall meet the following requirements:—

I. It shall be entirely free from mineral oil.

2. Unless sold as wood turpentine, it shall absorb not less than 340 times its weight of iodine (Hubl solution and method). If sold as wood turpentine it shall absorb not less than 240 times its weight of iodine by same method.

3. The undissolved (unpolymerized) residue on treatment of 10cc with 40cc of a sulphuric acid containig 20 per cent. of the fuming acid, shall not exceed 10 per cent. by volume of the sample.

4. The refractive index of this residue shall be not less than 1.495C at 20C.

5.—The refractive index of the sample at 20 deg. C. shall lie between 1.4680 and 1.4730.

6. The specific gravity of the sample at 20 deg. C. shall not be less than 0.860.

7. The initial boiling point shall not be lower than 150 deg. C. under ordinary atmospheric pressure.

8. At least 75 per cent. by volume shall distill below 160 deg. C.

9. The residue on evaporation over a steam bath shall not exceed two (2) per cent.

PLANNING AND ARRANGING THE NEW STORE.

(Concluded from page 30.)

salesman would hardly be suitable for this. A wooden counter seems to be needed.

In our silent salesmen we are arranging displays of particular lines, trying to keep these well classified. For instance one case we have given over almost entirely to bathroom equipment, such as sprays, mirrors, and brushes. Another case shows shaving material—not only razor, but strops, shaving brushes, soap and talcum powder. Some dealers do not seem to think soap and talcum powder are hardware lines. Perhaps they are not, but in a large number of cases where we sell a razor or a strop we sell also either soap or talcum powder. It seems to me that we might as well get the profit which comes from this sale as the druggist. Moreover by supplying these lines we are accomodating many—and of course that pays.

Other silent salesmen we have devoted to tools, and to fancy tea and coffee pots. These displays are drawing attention daily. No wonder there is a tendency to use these show cases instead of the old counters.

Our paint department we have had to put fairly near the back of the store. But it is prominent nevertheless. Our whole aim, indeed, has been to arrange a store which enables us to show attractively what we have for sale, and enables the customer to see not only what he came to see, but other things of interest.

Some Impressions of U.S. Convention

Fred C. Lariviere, One of the Canadian Representatives, Tells of the Big Rally at Detroit—Parcels Post Was Condemned Absolutely—A Big Social Gathering First—New Method of Appointing Committees Favored.

Written for Hardware and Metal by Fred C. Lariviere.

The National Retail Hardware Association, which held its annual sessions in Detroit, June 18-21, is a different body from anything we have in Canada. Although different from our gatherings, I am very glad that I was able to attend the sessions, for I met some splendid men, and observed some methods which I believe might well be introduced by our associations.

The National Hardware Association is, in my opinion, more of a legislative body than anything else. In the States the Hardware men are wonderfully well organized. Every State has its association. These hold annual meetings, and it is at these that the problems of merchandizing are discussed. The representatives at the National Association come from these State Associations. Their business is to discuss all questions —all laws which have been passed, or are about to be passed—which have a bearing on the hardware trade.

The representatives sent to this National Association are exceedingly well equipped to consider such questions. I met there several Senators, several Congressmen, and a number of members of various State Legislatures. They know the inside workings of the various legislative bodies, and they know the best methods to adopt in order to assist or prevent the passing of any law.

Debate on Parcels Post.

A question of law which is of interest to us in Canada, as well as to our fellow hardwaremen across the line, came up at one session. It was the question of parcel post. The debate upon this was to me one of the most interesting of the convention. There were a variety of suggestions made. Some thought that the proposal to give a limited parcel post should be allowed to pass unopposed. This measure, which would enable parcels to be sent within a small radius for a remarkably low postage, would, it was thought, work its own defeat. The cost upon the Government would be too great.

President Sharon E. Jones said: "I think the time is near at hand when we must submit to parcel post in some form or other," but it became evident that the general feeling of the meeting was against any such "laissez faire" attitude. The members feared that the local parcel post, instead of working its own destruction, might rather prove the thin end of the wedge which would make easy the coming of a wider reaching, and more harmful, parcel post law. The decision was to fight the coming of parcel post in every possible way.

Addresses were made by John A. Green, secretary of the National Association of Retail Grocers, and Arthur L. Holmes, on the Federation of Retail Merchants—an association which we have in Canada, but which is not yet organized in the United States. Canada is not always the last. I also enjoyed the addresses made by Messrs. S. Norvell, of The Hardware Reporter; Samuel Stern, of the American Artisan, James H. Kennedy, The Hardware Dealer's Magazine, and Roy F. Soule, of the Iron Age Hardware.

Open With Social.

The convention opened with a social gathering, and I think that is a scheme which might well be adopted by our associations. It gives all a chance to become better acquainted, and while no actual business is done a good many problems are considered in a free and easy way, and the ground is prepared for some fine discussions when the chairman's gavel has called the meetings to order. Holding our conventions in February and March makes it harder to arrange a successful social gathering. I sometimes think we might profit by changing the date of our meetings. But however that may be, I think we might well plan to have a social gathering at the start. It would bring the members together as I have said, and would prevent so many late arrivals.

At the National Association there was a committee called the Suggestion Committee, which merely proposed schemes of carrying out business more expeditiously and more effectively. The work of this committee struck me as good. It suggested, among other things, that the various committees should be appointed for the next year before the present gathering disbanded. Thus, it was argued, time would be saved.

I believe we might adopt some such scheme as that in our conventions. We are inclined to leave too much to our executives, and I believe the results would be better if more appointing of committees was done by the general associations.

Really the best time I had at the association was right here in Montreal. That sounds like an Irish bull, but will be understood when I say that the New England delegation, forty-five strong, stayed here over Sunday night and Monday on their way home. We went around the city together , and I was fortunate enough to be able to arrange a sacred concert for them in St. Louis de France church—similar to that which the Ontario Hardware and Stove Dealers Association members attended when their excursion came to Montreal in 1909—with a reception at our store afterwards.

CANADIAN DELEGATES AT THE DETROIT CONVENTION

Price Problems--5. Builders' Hardware

Higher Prices are Generally Paid Now Than Were Paid Twenty Years Ago—But the Style and Finish of the Goods is Much Better. The Same Class of Article Cheaper To-day Than it Was, and This Despite the Advance in Metal—Instances of the Improvement in French Door Catches and in Locks.

"A dollar would go further then than it will now."

The phrase has been much used in making reference to "the good old days." Also it has been much abused, for there are many respects in which a dollar will go further now than then. It will buy in some cases more goods, and in many cases better goods. Undoubtedly the cost of living has gone up, but the more this problem is studied the more it seems that the rise is largely due to a rise in the people's demands. They want better things now than they did, and they are willing to pay for them.

Builders' Hardware, it has frequently been said, has advanced tremendously in price. Whether or not this opinion is taken as correct, depends largely upon the point of view. People are certainly paying more for their builders' hardware now than they did—but because of this it is hardly fair to say that this line has advanced. A genuine rise can only be declared upon an article which has remained constant. Builders' Hardware has not done this. The articles for which people are paying a large price now, resemble the old articles bought in only one respect. They serve somewhat the same purpose. The new articles, however, are improved in a multitude of ways.

Higher Standard, Not Higher Price.

Really it can not be said that Builders' Hardware has advanced in price—since articles similar to those sold 20 years ago can be bought for less now than then. The higher prices paid are accounted for purely and simply by the higher standard demanded.

A few illustrations will serve to show that many simple lines can be bought not only as cheaply, but more cheaply than they could two decades ago. Locks, for instance, could not then be purchased for much less than 75 cents. To-day some styles are to be secured for 45 cents, or even less. Some will say that this old lock was better than the models now being sold. That may be so, yet none can deny that tremendous advances have been made in locks recently. However, this will be shown a little later, when builders hardware for hotels is considered.

Sets too are cheaper now than in the early 90's. Then it was practically impossible to get a better quotation than $5.00. Now plenty of sets are selling at $3,75.

Iron sash locks too are cheaper at present than they were. These used to bring $1.50 to $1.75 a dozen. Now $1.00 is considered a very fair price.

The Facts re Butts.

Cast iron butts, which are being largely used at present, are certainly as cheap as the steel butts so much in demand twenty years ago. They are not as cheap as the old cast iron butts, but an examination of the present product and that sold in those days which now seem so far distant, shows the reason. The cast iron butts of to-day are brass finished. They will not rust. They present a very fine appearance and can be used in place of regular brass goods.

Window pulleys too are as cheap now as formerly. Some models, which run on ball bearings cost more, but here the purchaser is paying more for a superior article, not for an article which could be secured those twenty years ago.

No, the true advance in builders' hardware has not been in price but in quality. The field has widened with the years. The making of these lines has become a fine art. Householders have become critics. They want the best, and they want the best often in unique designs. It is these things which have made a high price necessary. The only sense in which it can really be said that the manufacturers have raised prices is that they have raised the standard of the goods.

Some of the Improvements.

And how this standard has risen. Twenty years ago steel butts were generally used. Now bronze butts are common. On French windows there used to be bolts placed at the top and bottom to act as fasteners. Now the bolt runs the full length of the window, fastening at both ends, when a handle in the centre is turned. In the Chateau Laurier, recently opened in Ottawa, over 2,000 bronze metal butts, with fibre washers, were used. Those cost more than 2,000 butts would have cost in 1892, but consider the finish, the durability.

Then to-day everyone seems to be after some special design, and of course special designs cost money. Take the case of the Chateau Laurier again. The firm which finally got the contract for the builders' hardware, first submitted a plaster cast of the design, then a celluloid cast, and finally a casting. That meant a considerable outlay before the hardware itself was commenced.

Cut Glass Door Knobs.

People to-day are eager to get antique designs. They order these for their houses, and they are not daunted by the high price which they are told these will render necessary. Porcelain door knobs were wont to be used in bedrooms a score of years ago. Are porcelain knobs to be seen there now? Cut glass is the thing, and cut glass can not be had for a gramophone song. The only class of porcelain knobs being used now is a grade that is new because it is so old. But it is better made than the old knobs. It is antique and therefore is sold at a high figure.

The builders' hardware being used at present in public buildings is of an exceedingly high order—an order which simply was not known ten or fifteen years ago. The Montreal General Hospital has been equipped with solid brass butts with fibre washers. They are more expensive than the old butts, but do you wonder? In the Regina Hospital there are white enamel escutcheon knobs. Those are expensive too, but again the reason is patent.

Paying For Extra Service.

Then there is the question of locks, and swing door hinges. Locks are made more solidly now, and are much more burglar proof. It is for the security they give which people are paying, not for the extra price of the metal used. The swing doors have been so improved, that they do not fan too and fro after a person has passed through. They close, remaining quiet. Some of these spring door hinges have a latch which enables them to stay open—just as far open as may be desired. The door closed again, becomes once more a swing door. Such equipment costs more than the old spring doors. People are paying more for this extra service given.

Then take the case of hotel locks. Many do not realize that when they get a key to the door of their room in an up-to-date hotel they are getting but one of many keys. The guest goes out, locking the door. The maid comes along with a master key and can open it. So can the housekeeper with the grand master key. But the guest is inside his room, and turns the thumb lock on the inside of the door. This insures him

against intrusion on the part of the maid or housekeeper. But there is a key which will open that inside lock. It is the manager's emergency key. Supposing something should go wrong within the room. It would be necessary to make a quick entrance. The manager's emergency key will give access.

There is one other style of key used on some of these up-to-date locks. It is the display key. Say a guest has some valuable diamonds. He wishes to leave his room and to guard against the entrance of any servants. He locks the door with the display key. The master key and the grand master key are useless. Only the one key held by the manager, and the guest's own key, are able to open that door.

It is for such improvements as these that hotel owners are paying large sums. But office and house locks have improved almost as much. So have other lines. Indeed it is doubtful if there is a hardware branch where the advance has been more remarkable than in this line of builders hardware. Higher prices! Why, higher service should be the cry!

Catalogues and Booklets

Guns and Rifles.

Frederick Williams, Birmingham, England, has issued his illustrated price list No. 14. It contains a complete list of the guns, rifles, revolvers and saloon guns manufactured by this firm, as well as such sportsman's accessories as powder flasks, shot pouches, cases, loading and closing machines, bags, belts, covers and traps.

Small Ice Machines.

An interesting booklet has been issued by Pulsometer Engineering Co., Reading, England, illustrating and describing their small ice machines. It gives something on the principle by which the machines operate and outlines the methods of operation. The machines shown are hand machines and can be used with small expense and little exertion.

Stock List.

The July, 1912, issue of the monthly stock list of Drummond, McCall & Co., Montreal, has come to hand.

Shelton Vibrators.

The Canadian General Electric Co. have issued folders describing and illustrating the uses of Shelton Vibrators. These vibrators are used for facial massage, medical treatment of chronic appendicitis, treating obesity, etc.

A folder has also been sent out dealing with the Hart & Hegerman electric switches and buttons.

CEMENTS IMPORTS INCREASED.

Ottawa, July 16.—The custom figures for June show an increase of 115,749 barrels, or over 200 per cent., on the importations of cement as compared with June of last year. It is claimed that this is due primarily to traffic conditions; the difficult of getting cars for cement shipments in eastern Canada has, given the American manufacturers a chance to utilize the advantages of their nearness to the western Canadian market, and the principal increases in importation have been at westen ports of entry. British Columbia accounts for nearly 30,000 barrels of the total increase in importations last month. Spokane furnishing a convenient supply depot. The prairie Provinces absorbed the greater part of the balance of the increased importations. The Department of Customs is keeping close tab on importations and prices paid, with a view to getting data for consideration by the Government next fall when the question of continuing the reduction or restoring the old rate will be considered.

RESISTANCE TO CORROSIVE ACTION.

Recent experiments made at the laboratory of the Board of Water Supply, New York city, indicate that Monel Metal possesses about the same resistance to corrosive action as the better known bronzes, while it has the additional advantage that it presents the least change in appearance as result of the corrosive action. Specimens of several bronzes, Monel Metal and steel were weighed and embedded in rich earth which was kept wet for six months by periodical additions of very dilute solutions of corrosive salts. At the end of the test period all of the specimens were taken out, scrubbed, dried and weighed to ascertain the comparative loss from corrosion. The results were as follows:

	P.C. Loss.
Phosphor bronze	0.09
Tobin bronze	0.11
Monel Metal	0.12
Parsons manganese bronze	0.12
Muntz metal	0.33
Steel	1.04

ONTARIO REPRESENTATIVES.

The representatives of the Ontario Association at the Detroit convention were F. C. Lariviere, C. W. Conn and D. A. McNab.

Hardware Letter Box

Wire Baskets.

J. B. Crawford, Dutton, Ont. —"What firms manufacture wire baskets for displaying goods on bargain tables?"

Andrews Wire Works, Ltd., Watford, Ont.; Canada Wire & Iron Goods Co., Ltd., Hamilton; Dennis Wire & Iron Co., London, Ont.—Editor.

Electric Floor Scrapers.

Simmons Bros., Kingston, Ont.—"Can you give me name of manufacturer of Electric Floor Scrapers?"

Fox Supply Co., Brooklyn, Wis., U.S. A.—Editor.

Sterling Meat Choppers.

E. Boucher, St. Hyacinthe, Que. —"Can you advise me as to name of manufacturer of Sterling Meat Choppers?"

The N. R. Streeter Co., Rochester, N. Y.—Editor.

Gas Fixtures.

C.P.R. Men's Store, Redcliff.—"Kindly give me names of manufacturers of gas fixtures, chandeliers, wall brackets, mantles, etc."

Jas. Morrison Brass Mfg. Co., Toronto; Pittsburg Lamp Brass & Glass Co., Can. rep., R.E. Davis, 119 Wortley Rd., London, Ont.; Rochester Lamp Co., Church street, Toronto.—Editor.

Willband's Adjustable Door Hangers.

Sumner & Co., Moncton, N.B.—"Can you tell us who makes Willband's Adjustable Door Hangers?"

Probably the customer who enquired for this article made a mistake in the name. There is a Wilbern adjustable door hanger made by the Showell Manufacturing & Foundry Co., South Milwaukee, Wis.—Editor.

NEXT WEEK'S ISSUE.

A couple of articles intended for this issue have been held over until next week. These, added to the features previously arranged for the next week's issue, will make it one of the best put out in some time. One article will deal with window dressing and as the writer is a practical and successful window trimmer it will be well worth close attention. Another article will deal with the problem of cost distribution. This also will be of unusual interest.

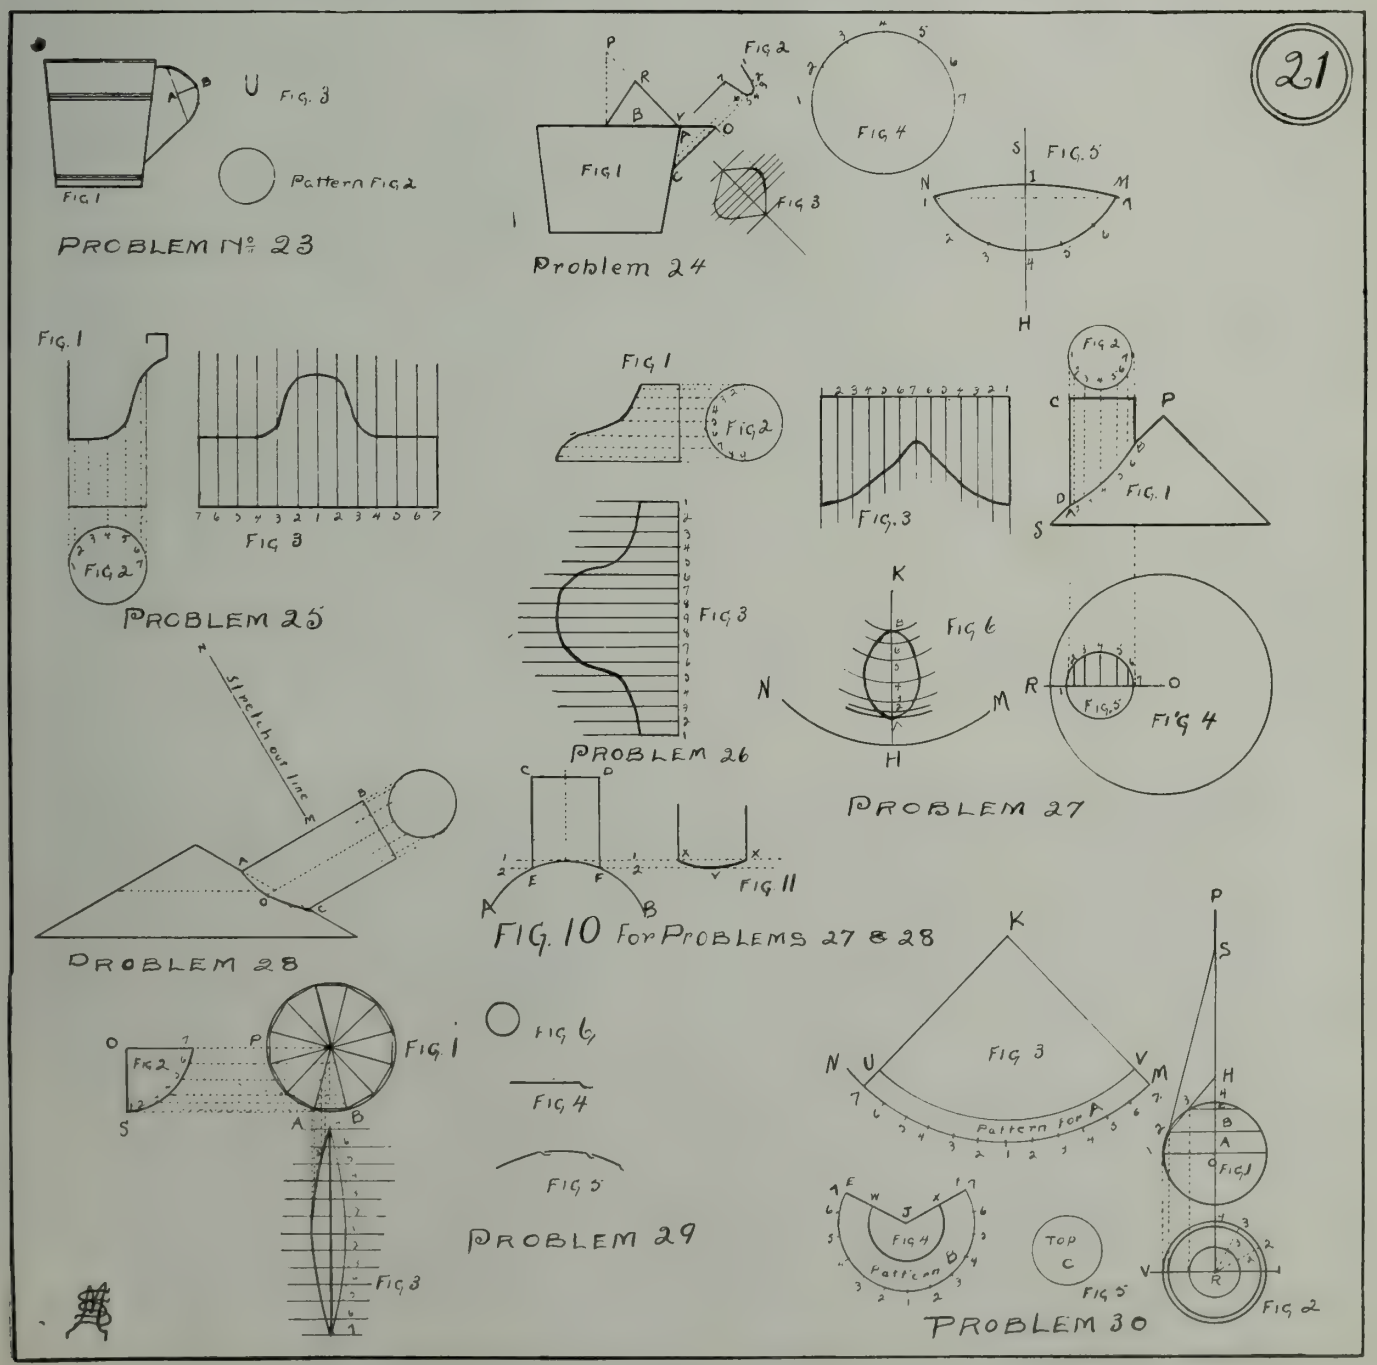
MERGER PENDING?

It is reported in the daily press that a merger is pending in the wire trade. which will include a number of independent wire mills. At time of going to press neither confirmation nor denial has been secured.

Complete Course of Sheet Metal Work

By L. W. KOSER

(This problem was started in the last issue.)



Now draw lines from each of the numbers into the centre R. By this means we divide the inside circles into the same number of equal parts.

Let us now develop the pattern for the zone A. Place the point of the compass at S, and the lead at 1, fig. 1, and with any convenient point as centre as K, fig. 3, describe the arc N-M, lay out the stretchout of the base of A, or the outside circle of fig. 2. Then draw lines from the points 7-7 into the centre K. Measure up on these lines the distance from 1 to 2, fig. 1, as shown by U and V. Then with K as centre, and K-U as radius describe the arc U-V. This completes the pattern for the zone A. Allow for flanges.

To get the pattern for the zone B, set the point of the compass at H, and the lead at 2, fig. 1, and with any convenient point as centre, as J, fig. 4, describe the arc E-F, on which layout the stretchout of the base of the zone B or the second circle of fig. 2, and draw lines into J, measure up the line E-J, the distance from 2 to 3 of fig. 1, and draw the arc W-X.

If there were more zones you would proceed in the same manner to get each one of them. To get the top part, put a circle a little larger than required, and raise it on the hammering block, or in other words, hollow it out to the shape of the ball.

The same remark in regard to flanges as set forth for prob. 29 apply to the zone method.

Lesson 18---Complete Course in Cardwriting

Showing the Lower Case of the Capitals Demonstrated in the Previous Lesson —The Three Cards Illustrated Introduce the Trade Mark Idea in Cardwriting.

By J. C. Edwards. Copyright Canada, 1911.

How many stores or commercial institutions work the trade mark idea to the extent that is possible? There are some that do, but there are hundreds that don't, and these are the businesses that remain small and immature, and the heads of these places wonder why those others grow and become industrial concerns.

The reason lies, to a great extent, in the advertising; either the advertising is too weak, or too little.

We suggest the selection of a good trade mark and advertising it everywhere, keeping it constantly before the public eye—in every advertisement, on every sign, on your electric signs, on every window card. Make it so common that every time it is seen it is at once associated with the firm's name.

The Trade Mark on Cards.

To demonstrate the trade mark idea on the show card, we are illustrating three sample cards showing the manner in which it is used.

The "hand bag" card has the double diamond trade mark, with the firm name or the firm's catch phrase inside. The space between the two diamonds is in a color which makes it stand out strongly in relief. In the "layette" card, the trade mark is more in keeping with the nature of the goods being advertised, the outline of the shield being in a light shade with the centre white, and the lettering in a light shade. The strength of the trade mark should be regulated by the style of card it goes on. The "suiting" card shows still another style which is in keeping with the general effect of the card, viz., the lined style.

Working Up a Design.

Get an idea into your head and improve on it wherever you can. Sketch the design in pencil first, just roughly, then, if it suits you, ink it in.

The design in the "hand bag" card makes a very good effect. The circles were made with an ink compass in alternate black and white lines, and then cross hatched with black ink. This design may be carried out to splendid effect in colors or tints. The floral effect is very simple, in fact only a suggestion is needed to illuminate the design.

First, the outline is made with the brush, then a light tint is added or filled in, with a few touches of the brush in the centre to complete it.

The Stork a Suitable Decoration.

If illustrations are used or drawings made on a card, they should harmonize with the inscription. The stork decoration used on the Layette card is quite in keeping with the "Dainty, Snowy Layette," as it is symbolic of infantile reception. This design is made by first drawing the bird in outline on the light champagne card, then coating the whole design with white and touching it up with a light grey and dark grey for the tips of the wings, the beak and the feet. The apple blossom designs used in the panel also lends a dainty touch to the card.

An Unusually Simple Treatment.

Note the very simple decoration used in the suiting card. It certainly is "distinctly different" and yet refined.

The word "suitings" is outlined first, with a brush No. 4, red sable, square point, drawn down small. Then the white line decoration is made, using the T square and small pen, say a number 5 or 6 soennecken, as shown in the upper corner of the plate. These lines may be made first, if desired, and the letter outlined over the top of them.

The letters then are filled in, leaving the space, as shown, open, allowing the white lines to show through.

The words "distinctly different" are made with a small soennecken pen and left in outline.

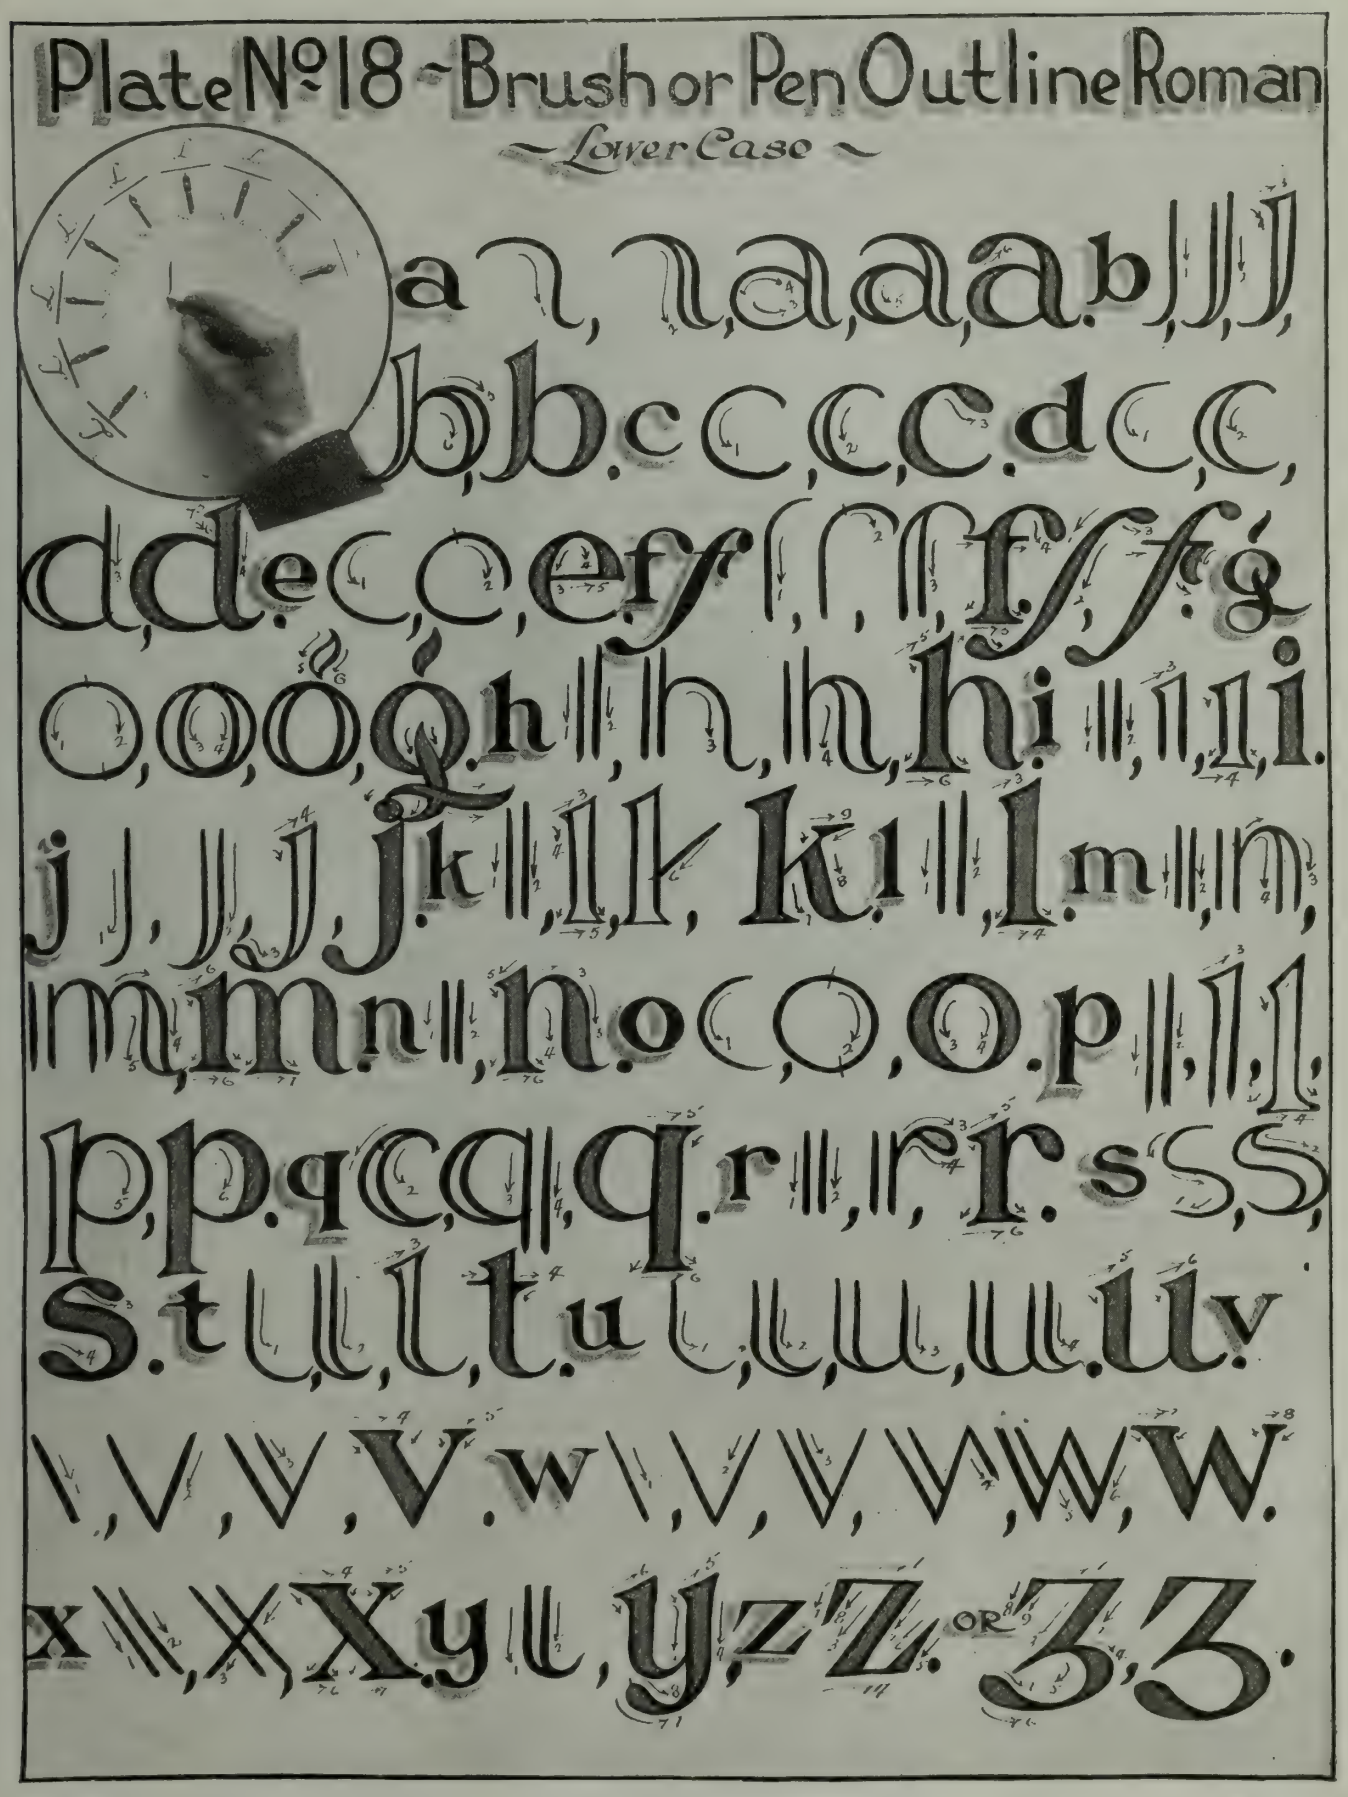
Ruling With the Square.

In ruling with the T square, be careful not to allow it to rest on the card, but to raise it high enough to allow the wide part or shoulder of the pen to rest against the edge. Hold the hand and T square steady and give a firm, quick stroke.

Another device for ruling is known as the ruling pen. It is a double affair, which may be regulated by turning a set screw. The ink is dropped in as needed.

Dainty Outline Lettering.

Nothing but dainty lettering should be used on such cards as the illustrated "layette" card. The pen outline letter gives a daintier effect than if filled in. The word "layette" is outlined with a grey shade and filled in with black, which brings this word out more prominently, as it is the main word of the inscription.



The Hand Bag Card.

The object in making the word "linen" the most prominent on the card is to bring out the importance of the novelty, otherwise the words "hand bag" would be given the foremost place.

For further particulars re brushes, pens, etc., write to the editor of this paper, 143 University Ave., Toronto.

Seasonable cards, introducing trade mark idea. See article.

This plate illustrates a letter that is particularly useful for fancy show card headings.

Progressive Hardware Retailing

Maritime Firm are Doing Nails up in Packages — Making Use of the Labor Saving Argument—Something With Reference to the Problem of Departmentalizing the Hardware Store—Profitable Methods of Getting After the Farm Trade.

NAILS SOLD IN PACKAGES.

St. John, N.B.—A time and money saving idea used by T. McAvity & Sons, Ltd., St. John, N.B., might be found worth adopting by other hardware merchants. It is only a detail but it is one of those things which make the difference between profits and losses. The usual style of retailing nails was found unsatisfactory. The old style nail bins were not an ornament to the store; the work of weighing out the nails took too much of the clerks' time and it was found that since nails were cheap the clerks were not careful about the weight and in some cases the customer would get nearer seven pounds than the five pounds he paid for. To obviate all this the firm started putting up the nails in cardboard packages of one, three and five pound sizes, each box plainly marked with the size of nail, nett weight and carrying the dealer's advertisement. The nails are put up by boys employed around the store in their spare time and carried up to the retail counters. With practically no extra expense the firm saves the time of their customers and their clerks, delivers the goods in neater form and does away with a serious leakage from the nail bins.

Editor's Note.— This is an idea of considerable value. The same troubles in handling nails are experienced in all hardware stores more or less and the solution presented in this case is the best we have yet encountered.

COST OR INVOICE PRICE.

A number of very interesting points relating to the management of the tinshop were made in the article by C. F. Fawcett, which appeared in last week's issue. The question of inter-department buying is well worth considerin When the various departments in the store are being operated on an independent footing, it will often be found necessary to take articles or material from one department for use in another and a proper charge should be made. In his article, Mr. Fawcett dealt with this matter as follows:

"I am not certain that we adopted the perfect method of doing this, but it seemed best to us. What the tinshop got from the hardware store it was paid for, but was paid only the cost price. On the other hand, what the hardware store got from the tinshop it paid for only at cost price."

A reader who states that he was deeply interested in the article, submits the following query: "What is meant by 'cost price.' Does this refer to the invoice price of the goods, or the invoice price plus the usual percentage for cost of doing business?"

We are not in a position to say, but presume that Mr. Fawcett meant the "selling cost" price—that is, the invoice price plus cost of doing business. To merely charge the invoice price would be to leave the door open for deplorable errors in figuring to creep in. If in figuring the price of a job in the tinshop, this charge were accepted on the real cost price of the goods, the result would be the striking of a low estimate.

AFTER THE FARM TRADE.

Summerside, P.E.I.—Brace, McKay & Co., hardware dealers, have devoted the whole of their advertising space to the goods now needed on the farm. The result of this concentration has been that they have aroused a great deal of interest in the agricultural sections.

Their ads., which are well illustrated, feature the following lines: Portland cement, paris green, haying tools, hay rope, harpoon forks, lock lever forks, hay carriers, pulley and blocks, rafter brackets, floor hooks, sling chains, rope hitches, pulley changers, rafter grabs, hangers, hay rakes, forks, scythes, swathes, whetstones, rivets, machine oil and oil cans.

Editor's Note.—This is undoubtedly the time to feature farm supplies. Concentration in advertising, especially when the lines selected are so distinctly seasonable, is bound to bring the best of results.

LABOR SAVING ARGUMENT.

The following extract from the advertisement of a Canadian hardware firm is well worth reproducing:

Beating carpets is hard work, and hard work is something you should avoid. The electric Vacuum Cleaner takes the dirt out of your carpets and rugs without removing them to the back yard and the only work in connection with the operation is the turning on and off of the juice. This is a modern age. Modern because of its labor saving devices. The ancient housewife is the one who still sticks to the old methods. The modern woman in the home employs the latest devices on the market. She is not only modern in this respect but also in the way of saving money and looking fresh and beautiful. Modern devices may cost a trifle more at first, but they pay for themselves in anywhere from three to six months, and all the remainder of the time in use they are continual and perpetual dividend payers. And then again when the wife does not work so hard she has a better chance to appear as the beautiful girl you courted. Isn't that so? You bet it is. And that's one reason why the honeymoon season wilts and dies in a few days. Don't let your wife drudge. Let your ideals of the courting days predominate. Buy an electric Vacuum Cleaner.

Editor's Note.—This is an age of "short cuts." The elimination of unnecessary labor is one phase of efficiency and consequently labor saving devices are sought for and valued. To demonstrate that a certain instrument or article saves labor is to insure its popularity and acceptance. Advertising writers might make more use of arguments similar to the extract reproduced.

BENEFIT FROM HEAT.

Rocanville, Sask. — S. Schwanz, who has adopted the slogan, "The man you know," has been taking advantage of the warm weather to feature goods which are particularly desirable when the weather is hot and trying. In a recent advertisement, he says:

PRETTY HOT, EH?

Yes, it is, but there are many things at small cost that will help you to keep cool.

He continues by dilating on the merits of his two-burner gasoline stoves, ovens, gasoline smoothing irons, hammocks, lawn seats and swings and ice cream freezers.

Editor's Note. — Every atmospheric condition created a distinct need or needs. The dealer who seizes every opportunity to feature the goods which will fill each need as it arises, will not have to worry about meeting his payments.

Current News of Hardware Trade

By-law Carried.

Owen Sound, Ont.—The by-law to ratify a loan of $20,000 to J. H. Cote who is to start a factory to manufacture wire and wire nails, was endorsed by the ratepayers.

Stolen Goods Recovered.

Woodstock, Ont.—A great part of the hardware stolen from the store of McKiggin and Son ten days ago was recovered from the man Mulhall who was captured in Toronto, and has been returned to its owners.

Fire in Saw Factory.

Galt, Ont.—A blaze broke out here in the hardening room at the Shurly-Dietrich factory. A heated pipe set fire to the ceiling. The damage done was small.

Portraits of Founder.

A large portrait in oil of John McClary, founder and head of the McClary Manufacturing Co., London, has been sent to each of the branch offices of the company. The pictures are striking likenesses and are very much prized by the staff officials at the various branches.

Broom-Makers Meet.

Hamilton, Ont. — The International Union of Broom and Whiskmakers held their annual convention here. Officers were elected as follows:—President, W. R. Boyer, Chicago; First Vice-President, R. Kienzie, Philadelphia; Second Vice-President, W. S. McAdam, Hamilton; Third Vice-President, F. Cole, Minneapolis; Fourth Vice-President, T. J. Mulick, St. Louis; Fifth Vice-President, J. J. Debarry, Wichita Falls, Texas; Secretary-Treasurer, C. T. Dolan, Chicago.

To Make Fittings.

Hespeler, July 16.—It is announced today that the immense mill, formerly belonging to the Canada Woolen Mills Co., but for the last eight years idle and unoccupied, has been acquired by a limited liability company for the purpose of manufacturing stove furniture and fittings. The company is composed of five men whose names have not been divulged at the present stage, who have subscribed $50,000 to the paid-up capital of the new concern.

Gasoline in Coal Oil.

Hamiota, Man.—A bad fire was narrowly averted at the Manitoba Hardware store. It seems that some mistake was made in the gasoline and coal oil barrels and a barrel of gasoline was dumped into the coal oil tank. The mistake was noticed at once and the clerks were in the act of taking the gasoline out again, when the lantern was placed too close to it causing an explosion. Fortunately the flames were extinguished before much damage was done.

Leaves Hardware Field.

Montreal.—W. J. Rogers, who has been with Starke Seybold for the last fifteen years, recently as manager of the Country Department, has severed his connection with the firm, entering the retail dry goods business in Montreal. The staff, wishing to show their good feeling for Mr. Rogers, presented him with a handsome travelling case. Col. Robert Starke made the presentation, telling Mr. Rogers that while the firm was sorry to lose his services he could be assured that he had every good wish for his future success. Mr. Rogers responded in a manner which showed that he will always look back upon the days spent in hardware with pleasure.

Business Changes.

Prince Albert, Sask.—Le Croix Bros., are adding a stock of hardware.

Briercrest, Sask. —A store has been opened here by the Miller-Volway Hardware Co.

Ponaka, Alta.—L. B. Coutright, hardware dealer, has taken F. H. Steele into partnership. The firm name will be Courtright & Steele.

Chilliwack, B.C.—H. H. Gervan, hardware dealer, has sold out to Menzies, Sons & Co.

Sintaluta, Sask.—Wilson and Vallean, hardware dealers, have dissolved partnership.

New Retail Firms.

Leask, Sask.—R. & A. E. Mansell have opened a hardware store here.

Fort Frances, Ont.—Holmes and Son have their new hardware store completed. R. Simpson has been appointed manager.

Personal Notes.

Chas. E. Stewart, president of the James Stewart Manufacturing Co., Woodstock, is in Winnipeg, attending the Winnipeg Exhibition.

F. W. Gaston, of Joseph Fenton and Sons, Sheffield, has returned to England after a trip through Canada.

Elgin, Ont.—Harold Becker has accepted an important position in the office of the Aylmer Pump and Scale Co.

Messrs. Peck and Stanley of the Stanley Rule and Level Company were in Montreal this week, and were entertained by a number of local hardwaremen.

S. Coomber, Canadian manager for Hy. Rogers, Son & Co., England, is at present making a busines trip through the west.

CLOSING OUT SALE.

Camrose, Alta.—H. W. Storey, hardware dealer, is closing out a number of lines, including certain farm and household implements. He is holding a special sale. "We sell for cash and sell for less" is the slogan of the sale.

HE SHOULD ADVERTISE.

The following story has been going the rounds, and has appeared in a number of publications:

A hardware merchant went home to supper one night and a new silver percolator was on the table. He asked his wife where she got it and she said, "Why, dear, I selected it out of Smith's catalogue and it only cost me $4.25 and the express." Of course, the husband was mad in a moment, and said: "Why in the deuce didn't you tell me you wanted the thing? I have lots of them in my store and they only cost me $3." Then his wife handed him one like this: "Well, John, if you would advertise once in a while so the people would know you were still in business, maybe the people wouldn't send away for so much stuff."

Editor's Note.—This incident is, of course, pretty far fetched, but it has a moral just the same. While lack of advertising may not drive a dealer's own family to purchasing elsewhere, it certainly does cause customers to acquire the mail order habit.

NEW BUILDING COMPLETED.

Montreal.—The Dominion Cartridge Company's new building, on the Canal bank in Cape St. Paul, is now nearly completed. This is a two storey structure, 30 x 100 in size, and is being used for the manufacture of paper shells.

NEW WINDSOR INDUSTRY.

Windsor, Ont.—The Ideal Mat Co. of this place has been incorporated with capital stock of $100,000, for the purpose of manufacturing mats and hardware specialties. The promoters are Franklin Davis, Windsor; Chas. Hendrie and Harry Dunham, Detroit; and A. F. and Alive Healy, Sandwich.

Weekly Market Report --- Metals

METAL NOTES.

Business all around is active but supplies are very short.

Lead is hard to obtain. Galvanized sheets are also becoming scarce.

Copper and tin are quiet but there is still a steady buying movement.

MONTREAL.

Montreal, July 18.—While there have not been any changes in price during the week, the likelihood—no the certainty—that such changes will come shortly is causing considerable interest. The market at present, indeed, is one very well worth watching. Not only are higher prices coming, but there is great need that dealers should take care in ordering, or else they are going to be pinched by the shortage which has already made itself felt.

This shortage is the feature which is causing the most anxiety. Handlers are not caring much now about the higher prices. They regard these as inevitable, but the lack of supply is a feature which all agree is serious.

Lack of Soil Pipe.

It is in soil pipe and fittings that the shortage is greatest—though galvanized sheets too are far from plentiful. Lead and lead products also are hard to get.

"Dealers will not order much ahead in spite of all indications," said the manager of one concern, when speaking of the present situation. "Those who do not, however, are going to be pinched. I don't say they may be pinched. It is certain they will be pinched. There is not a sufficient supply on hand to fill all requirements."

The advances in price are expected in those lines which are scarce. It is not altogether the scarcity which is bringing the advance, however; the high prices of the raw material is another cause.

Lead.— Of late the primary market has been a little vacillating, declining only to advance once more. At present the price is high, and the indications are that another advance may come.

Lead Still Scarce.

But to this no atention has been paid. The thing watched and commented upon is the diminution in the supplies. Those needing pig for manufacturing purposes have been unable to get all they need.

Copper.—For once there is little to report here. Prices have not been changed locally, the small declines on the primary market not having been sufficient to justify this. There is some conjecture as to the future of this metal, but generally it is agreed that a lower level is hardly likely to come at once.

Iron.—The supply is fair only. It is the products, however, which are most interesting at present. Soil pipe ,it appears, is certain to advance. Fittings too will reach a higher figure before many days pass. This is a good time to buy. The prices now are better than they may be for some months to come, and present buyers are likely to get what they need—something which manufacturers will not promise to give those who place their orders at the last moment.

Good Time to Buy.

Galvanized sheets (corrugated) are also scarce at present—partially because of the shipping trouble in England. They too, seem likely to advance in price. Those who need to replenish their stock might well order without delay.

Spelter.—In Montreal the supply is now very fair. Prices, however, continue high. Present indications do not seem to point to any decline.

TORONTO.

Toronto, July 18.—The metal situation is not just as satisfactory as it might be. "We are selling all we can get," stated one man. "But we can't get enough." That sums up the situation very concisely. Demand is heavy but supplies are, in some lines at least, pretty light. Shortages, in fact are developing in some lines.

Prices have not been changed but rumors are heard of impending alterations. All talk is of upward changes. The market seems on the verge of an advance in some lines.

No Developments in Tin.

Tin.—The tin situation reflects an unusual condition of dullness. Demand seems as good as ever but interest has declined for the time being. The price is a little weaker on the London market but this condition usually obtains before the Banca sale.

Copper.—The situation with regard to copper is very similar to the tin position. There is still plenty of buying reported at the price which has prevailed for the last few weeks and the confidence of buyers does not seem to have suffered any setback as the result of the temporary weakness reported on the primary markets. A despatch from New York outlines the situation there concisely:

"The foreign copper market seemed to have an improving tendency until the English and French statistics came out, showing an increase in the foreign visible supplies, spot and afloat. Market was firm on the first cable, sellers (second hands) shy, but later on they were more disposed to sell and buyers less disposed to do anything. There is no change in the producers' attitude which seems to be to ignore the foreign decline, and to hold their prices unchanged until the second hand lots which they believe to be limited, have been absorbed, when buyers will be forced to come to them for supplies."

Lead is Scarce.

Lead.—The scarcity continues as pronounced as ever. An impression seems to exist here that a deliberate effort among European handlers to create a shortage is the cause of the small supplies coming forward. Whatever the cause, the fact remains that lead is very hard to obtain here. The price remains the same.

Plates and Sheets.—A shortage is developing in sheets and fears are entertained that this is only the beginning of a siege of scarcity. Prices have not changed.

Spelter.—Spelter is in good demand and it remains firm. This is to be expected in view of the high prices which prevail on the primary markets. At American points demand continues good. The smelters are now confronted with a strong ore market at record high prices and in their efforts to avoid being obliged to pay prices asked by ore producers are trying to keep out of the market for ore. This they can only do by watching their sales of the metal. Any further advances are likely to send orders to Europe for eastern consumers. Market is quiet but very strong.

Pig Iron.—There is a good demand. Prices are firm.

WINNIPEG.

Winnipeg, July 16.—The scarcity of plate is a most unfortunate circumstance, very hampering to the trade at the present time. Local metal workers have been at their wits end to secure supplies, but so far with very poor success. The shortage is being severely felt by local manufacturers and others in the trade.

Lead prices are stiff and going up, a notable advance since last issue being a raise of 65 cents per cwt. on lead pipe. Copper is also very firm.

The local iron works and foundries are extremely busy, and their capacity is taxed to supply demands notwithstanding heavy importations.

The rapid increase in the building permits during the last two weeks indicates that business in steel and cement is not likely to fall off for some time to come.

Weekly Market Report --- Hardware

ACTIVE TONE TO TRADE.

The wholesale hardware trade has been very busy. No signs have yet been felt of the trade "calm," which usually comes in the mid-summer months.

There is a firm tone in regard to prices, but only one change has been made. Shot is now being sold net.

MONTREAL.

Montreal, July 18.—It is not often that a net price list is noted these days, but within the week shot has been put on that basis. This is the one price change of any moment noted since the last report; but the advance indicates that lead products are still on the rise.

Generally business is reported as being in an exceedingly healthy state. The retailers are finding a heavy demand for all seasonable goods. Especially is the demand good for such goods as are needed for preserving. So large has the demand been that sorting orders are being sent daily to the jobbers.

Widening of Seasonable Lines.

Seasonable Goods:—Owing to the somewhat peculiar season, the class of goods which may be regarded as seasonable is now larger than usual. Still lawn mowers and lawn hose are in demand, while clippers and sprinklers are being bought daily. Retailers are still finding it advisable to arrange window displays of this class of goods, and certainly they are getting results. The hot weather has made hose necessary, and the long grass demands trimming.

Preserving goods, as has already been said, are wanted now. Apple parers and fruit presses, cherry stoners and similar lines are being ordered largely. The retail demand for these is only well started, but indications are that the business will be larger than last year.

Many Ordering Early.

Retailers, moreover, are now preparing to meet the demand of the growers and packers. Apple nippers are being purchased, also barrel hatchets and barrel headers. These are being shipped immediately now, and those who are placing their orders will be sure of the goods when they need them. It seems that all who find a good business in such lines would do well to estimate at once what they will need, and get their orders off.

Builders Hardware:—The orders continue large, but aside from this there is little to report. No more price changes have been made, and it seems more and more unlikely that any such changes will occur.

Harvesters Tools:—Here the business is growing daily. Many orders have already been filled, but more are being received—some from new firms, and some from firms which have already had one shipment of goods and find they will need more. For binder twine and rope there is a remarkably good demand—and this in spite of the recent advances. It seems that there are things more unlikely than a still further advance in some of these lines. Both rope and binder twine are being sold at an exceedingly low margin of profit just now.

Shot Takes Another Rise.

Sporting Goods:—Aside from shot, which has been raised so that instead of a 5 per cent. discount the list is now net, there have been no changes. All lines are selling finely. For bicycles there has been a good demand. These seem slowly to be regaining the ground they have lost. Perhaps they will never become as popular as during the years of the bicycle boom, but it seems men are taking to the bicycle once more.

TORONTO.

Toronto, July 18. — The wholesale hardware trade has been extremely good. A general activity is noted and, although business is usually expected to fall off about this time of year, there have been no signs of a slump so far. The volume of trade to date has been in excess of last year, and, from present indications, the present month will help to swell the margin.

While only one price change is reported this week, an advance in shot, there is a general tendency toward firmness noted. This is due to a number of causes, but is probably attributable to the advancing cost of metals more than to any other single reason.

Harvest Tools.—The big feature of business at the present time is the sale of harvest tools. Orders are pouring in from all sections, particularly from rural points. The weather has been favorable to the crops and harvesting work is now well under way. The demand extends to all tools and utensils needed by the farmer during his busiest season.

There is a big trade being done in binder twine. Sales this year will be larger than ever before.

Preserving Goods Move.

Household Goods.—There is a distinctly big demand now for preserving kettles, cherry pitters and similar goods. General household lines are moving in satisfactory bulk.

The refrigerator demand has fallen off to some extent, but the complete output of the manufacturers is mortgaged nevertheless. Some manufacturers refused to accept orders for this year several weeks ago. The large number of apartment houses being built has resulted in prolonging the demand for refrigerators well into the fall. Many large orders have been placed for shipment between September 1 and November 1.

Seasonable Goods.—The demand for summer goods is now pretty largely of the sorting variety. While the volume of business is good, it is made up of a great variety of small orders.

Builders' Hardware. — Business all around is good. The demand for brass and bronze finished hardware has been exceptionally large this year as a result probably of the large contracts which have been let in this city. All through the province, however, there is a great amount of building going forward, and this has livened up demand for hardware.

Heavy Hardware.—Business is reported to be good in all lines.

Sporting Supplies.—As a result of the high price of pig lead, an advance has been made in shot. It is now being sold net, the former discount of 5 per cent. having been withdrawn. Trade is active in all sporting goods at the present time.

WINNIPEG.

Winnipeg. July 16.—This week in Winnipeg was a little out of the ordinary on account of the start of the Exhibition and the arrival of thousands of visitors among whom are the business men of other western cities and towns. While no doubt the seed will be sown at this time from which will be reaped much future business, there is no doubt some breaking up of the ordinary routine owing to celebrations and the general excitement that obtains at such seasons.

The grain crop of Western Canada has now reached a stage where a good average yield is practically assured. Confidence in the situation has completely taken the place of the doubt beginning to be felt two weeks ago and the promise of an abundant crop selling at a remunerative price makes the business outlook in the west most satisfactory to all western people.

The demand for all lines of seasonable hardware continues as strong as ever. There is an active trade being done in harvesting tools. The heavier hardware in use for buildings is moving freely and houses handling machinery and machinery repairs report a season of exceptional activity.

Should Original Bills of Lading be Supplied?

Western Dealer Contends That the Practice of Sending Copies or Memos Means Delay in Cases Where Claims for Shortage or Damage are Preferred—Should Weights be Marked?

Adanc, Sask., June 28.

Editor, Hardware and Metal:—

Would like you to give publication to the following question. The C.P.R., in the event of claim for damage or shortage of freight, demand the original bill of lading before they award the claim. Fifty per cent. of the firms we deal with send us memo of bill of lading instead of the original and, in the event of claims—which are common with us—we have to write away for the original. This delays settlement, especially as the railways take two or three weeks before they ask for the original bill of lading (sometimes.)

Again, we have asked two or three firms we deal with to state weight of goods on bills of lading instead of leaving it to the railroad to guess the weight. This morning we paid for 210 pounds when the goods only weighed 140. The agent grumbled when he had to alter the weights. We asked the firm on a former occasion to state weight on bill of lading and they said that they would do so if it were at all practicable. Now, we consider that it is practicable and very simple. Most hardwaremen know the weight of a crated washing machine or grindstone and it would take no time for the shipper to fill in the weight.

We would like you to sound the general opinion of the hardware trade on this question. Perhaps the Ontario dealers are not affected by this as much as we are. We have more damage of freight in the West, hence more claims and more need of proper bill of lading; viz.: the original, with weights marked. We can name some good houses who send us memo of bill of lading with weights of shipment correct.

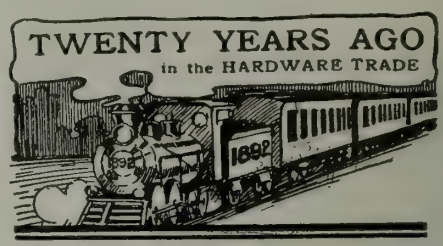
MOORLEND & SON.

In accordance with the request of our correspondent, the above letter is placed before the readers of Hardware and Metal. It deals with two questions of interest and any opinions relating to either point, or to kindred matters, will gladly be published.

Since receiving the above communication, Hardware and Metal has made some enquiries into the practices followed in connection with the handling of bills of lading. The enquiries have been made from Eastern firms, but it is believed that Western firms have adopted the same idea.

All firms approached stated that they had made it a practice to retain original bills of lading.

"This is done," said one man, "in order to protect the consignee. It is always well to keep original documents and, if we were to send them out, in a great many cases, they would be lost. The wholesaler or manufacturer always follows a regular system of filing, while some retailers are careless and do not carefully file all such documents. If the originals are retained, they are sure to be kept and can be produced if emergency arises. If sent to the consignee, they may be kept. If we err in sending copies only, we err on the side of safety."



A Toronto wholesaler states that whereas some dealers undoubtedly are sure to keep all records, others are not careful. "If a dealer really wants the original we would send them to him," he declared. "We do not consider it safe in all cases, however. We make it a practice never to send the originals to the railroads in case of claim, until they are specifically asked for."

In the West, claims are more common than in the East, on account of the longer distances that goods have to be shipped in so many cases.

It is not the general practice to mark weights on bills of lading.

"It would mean considerable work for us," said one jobber. "However, we would be prepared to shoulder the burden, if we thought it was likely to benefit our customers any. I am not convinced that it would. The railroad man approximates the weights pretty largely, and in a majority of cases he is inclined to be lenient. I am honestly convinced that, taking it on the whole, the dealer gains by not having the goods actually weighed every time. There are, of course, cases such as the one you quote, but generally it is the other way around."

A number of dealers were seen with reference to this question. "I watch shipments very closely," said one man. "Sometimes I have been charged too much, but have been able to get this adjusted. Frequently the weight is estimated low.'

The following items are taken from the issue of July 23, 1892:

"The contract for the heating apparatus of the public building at Peterboro, has been awarded to McGuire & Bird, of Toronto."

Editor's Note.—This firm is now known as W. J. McGuire & Co. They are among the largest concerns of the kind in Toronto.

* * *

"Black Bros. & Co., wholesale hardware dealers, Halifax, register the co-partnership of Geo. J. Troop, Wm. H. Troop and Gilbert Troop."

* * *

"A very disastrous fire broke out in Montreal on Monday evening. It spread to A. Ramsay and Sons' paint and oil establishment after demolishing two nearby buildings. The total loss will be almost about $200,000."

* * *

"All the foundries in Hamilton are now reported to be working full time and with full force. Wages are $1.50 to $3.00 instead of a general scale of $2.50 for all hands."

Editor's Note.—The moulders and employes of stove foundries are paid considerably more now. In fact, the cost of everything in connection with the manufacture of stoves has increased to a marked degree in the last two decades.

* * *

"A deputation of wholesale merchants waited upon the Hon. J. A. Chapleau, Minister of Customs at his office in Montreal. Their purpose in doing so was to ascertain if greater uniformity could not be secured in the interpretation of the tariff. J. B. Learmont, R. Angers, T. H. Newman and Gordon Macpherson spoke for the hardware trade, and A. Ramsay for paints and oils. Each gave instances where appraisers at different points classed certain articles under different heads.

Methods of Retailing Paints and Varnishes

Linking Paint and Profit Closely Together

Adequate Interior Display is One of the Prime Essentials—Points Which Should be Remembered in Arranging Department—Stock Should be Kept Intact and Exclusive—A Quebec Dealer's Model Department.

Paint and profit are quite a distance apart in the dictionary, but in the up-to-date hardware store they are as close together as peas in a pod. They are almost synonymous terms. Paint and profit go together.

In order to find the close connection between the two words, the dealer has to see that he is handling his paint stock in a profitable way. He must feature paints—not merely carry them. There is a wide difference between "featuring" and "carrying." The carrier of paint is the man who buys a certain amount of stock at long intervals, puts it somewhere or anywhere, in the store and sells it to people who come in and ask for paint. The featurer of paint is the man who buys at frequent intervals, places his goods prominently in the store, and tries to work up the maximum demand.

Space does not permit of a complete dissertation on the many ways of featuring goods necessary to establish closest relationship between paint and profit. One of the most important, certainly, is that of giving adequate interior display. Give the stocks properly prominent housing in the store and sales will follow.

"Paint should be given one side of the store at the very front," was the emphatic opinion expressed by a progressive retailer recently. His argument was that, although in reality a necessity, paint was not yet fully recognized as such. Some people considered it more or less of a decorative luxury. To educate these people to the true value of paint, it was necessary to keep the subject before them and this he accomplished partly by placing his stock at the very front of the store. "This space," he explains, "was formerly occupied by goods which were necessities in the real sense of the word. People couldn't get along without them. What, then, was the use of giving them part of the best space in the store, when I had other stock which needed that preferred position badly?"

It is not always possible to give the front of the store over to the paint stock, of course. Lack of space is one of the problems most hardwaremen have to face, and it frequently happens that the paint must be less prominently housed. However, if a front seat in the orchestra is not available, there is no reason why the end row of the top gallery should be selected. An effort should be made to give the paint stock a position as close to the front as possible.

"I have always contended," said an Ontario hardwareman, "that the goods shown at the front of the store must show a more rapid turn over and a bigger profit than goods placed further back, in order to pay for the valuable space occupied.

"Recently I moved the paint from a rear position to a prominent place in the front and I decided that I would assess that department an extra margin of the overhead expense on that account. If the department did not pay the same profit as formerly over and above this additional assessment, I was prepared to 'shunt' it back to the rear again.

"I need not have feared on that account. My paint profits exceeded the old figure by a good sum after allowing for the heavier expense."

Position is not the whole thing, of course. The goods must be attractively arranged. It is quite possible to find cases where men who keep their paint stock at the rear of the store are selling more than those who display their stock at the front. Prominence of position will not completely overcome the detrimental effects of an untidy arrangement and the resultant unkempt appearance. On the other hand, a poor position will not completely offset the salesmaking power of a well kept stock. Good position plus care in arrangement results in the dealer's securing the maximum of business.

A MODEL DEPARTMENT.

This is a view of the paint stock in the store of P. Larochelle, Farnham, Quebec. The arrangement is a model one in many respects. The stock is well sorted and complete. It occupies a prominent place in the store and as a result has sales-making power to a marked degree. There is a close connection between paint and profit when the stock is handled so effectively.

A point which should always be borne in mind is that when a certain position is alloted to the paint stock, it should be given over absolutely. Nothing is so destructive of selling force as to mix in other lines of goods. It is not uncommon to find stores where the paint stock is scattered pretty much throughout the store. You find a row of carriage paint in with the graniteware. Floor paints are piled up on a counter some distance off. Varnishes are back in the stove department; and so on, right through the whole establishment. In other stores, the paint stock is kept centralized, but other goods are allowed to creep in.

These methods are bad. The paint stock should be kept both intact and exclusive. The particular corner set aside for this purpose should have "the paint stock, the whole paint stock and nothing but the paint stock." In that way the best effect can be secured.

Making it Attractive.

To make the paint department attractive, the dealer must see that the stock is properly sorted up, that the tins are dusted regularly and thoroughly and that no old supplies are allowed to accumulate. As an extra step, use should be made of the selling helps supplied by the manufacturers. Nothing helps to improve the appearance of the stock more than the display of lithographs and color boards.

A Model Department.

On the previous page, an illustration is given of the paint department in the store of P. Larochelle, Farnham, Quebec. This is a model department in a great many respects. Nothing is seen but paint, and the usual accessories, the stock is well arranged and good use is made of lithographs.

Attractive and complete arrangements such as this are indeed rare.

Paint and Profit.

To sum up, the hardwareman who is anxious to realize the fullest profit on his paint stock, must among other things see to it that his stock is kept both prominent and attractive.

Getting the Master Painters' Trade

Complaints Are Heard That Some Dealers Are Selling to the Painters at Practically Cost Price—The Folly of This Course is Demonstrated—At the Same Time, the Trade of the Painter is Worth Trying For.

A hardware dealer complains that other firms in his locality have introduced unfair methods in going after the trade of the master painters. They cut their prices, in some cases almost to the wholesale figure. As a result they have been getting the bulk of the painters' trade, but have certainly sacrificed their profits in doing so.

This complaint is not a new one. It has been heard on many occasions before. The practice has become a common one in some sections.

The dealer who deliberately cuts his price to the master painter so low that no profit can be realized—and there are many who do this—can have but one object in view. He aims to corner the trade of the master painters and so work up so large a trade that he will be able to buy in big bulk and, perhaps, get a closer figure.

The practice cannot be too strongly condemned. On broad general principles it is harmful to sell goods regularly without securing the necessary margin of profit. The existence of an ulterior motive does not justify the step. The dealer may think that by sacrificing his profits on these sales, he is going to build bigger profits elsewhere. A bird in the hand is worth two in the bush and a profit on present sales is worth a bigger one in prospect. Getting a fair margin of profit all around is the safe and sane method.

It is very doubtful, of course, if the expected profit on such methods would materialize. The dealer who sells at cost price to the master painter expects to make a larger profit on his sales to consumers. It is doubtful if he would ever realize a margin on consumer sales large enough to offset what he would lose on his business with the master painters.

But is the Game Worth the Candle?

A great many dealers contend that they would far rather increase their business with property owners than with master painters. "Whatever losses I have had on paint sales through non-payment," said one dealer, "have been incurred with master painters. I always feel surer of my money when I sell to the owner of the house than when I sell to the painter."

Another dealer states that at least 90 per cent. of his bad debts have been with master painters. While it is probably not as noticeable in all cases, the general experience of dealers is that their margin of loss with master painters is larger than with property owners. This is due to the fact that the bulk of the sales to property owners are on the cash basis, while master painters invariably run accounts. If they fail, or get into financial difficulties, the dealer is the loser. The larger the business with the master painter, the larger the margin of losses will be. How are these going to be met, if all profit is taken off the goods? Must the losses be made up out of the profit on other sales?

Go After Painters' Trade.

At the same time, the writer does not agree with the dealers who state that they would rather not sell to master painters. To adopt this stand would be to deliberately throw away the opportunity of working up a very profitable trade.

The painter is the largest individual consumer of paint. If he is a good workman, he finds no difficulty in securing steady employment. If properly regulated, trade with the master painter can be made most lucrative.

The average painter still prefers to buy white lead and linseed oil and mix his own paint rather than to buy prepared paint. Gradually, however, he is coming around to respect the superior qualities of the ready mixed article, an opinion which is doubtless being strengthened by the gradual advance in the price of white lead. When a dealer can convert a master painter to the use of prepared paints, he secures a steady customer. By careful supervision of credits, he can guard against heavy losses on poor pay customers.

But, it may be argued, the cutting of the price is a good way to educate the master painter to use ready prepared paint. It may be, but the trade is not worth getting at that price. If the master painter cannot be convinced that he should use prepared paint without offering the goods at a price which includes no profit, he might as well be allowed to remain in his ignorant adherence to the old way, for all the good the dealer reaps from it.

MANUFACTURERS DELIGHTED.

Montreal, July 16. — The party of British manufacturers arrived in Montreal last evening after a forty-day coast-to-coast tour of the Dominion. Their trip, which was made with the co-operation of the Dominion Government for the purpose of investigating the possibilities of Canada, covered approximately ten thousand miles, and all the principal cities from the Atlantic to the Pacific were visited.

While the tour has been a continuous round of sight-seeing and entertainment since their arrival in Quebec on June 8, the visitors stood the strain well and all return to Montreal in excellent health and spirits. "Somewhat tired, but delighted," was the expression heard from many of the Britishers.

The party will sail from this city on the Allan liner Victorian Friday morning.

And That Varnish Is "ELASTILITE"

A beautiful all-round varnish, not too sensitive, and easy to apply. Good indoors or out, except for floors. Used for 20 years by all sorts of varnish users.

Stock ELASTILITE and you'll get the benefit in the trade it keeps for you—one of the best high-gloss varnishes a retailer can sell—it makes good in so many uses.

Don't Rock The Boat

"Business is a great sea, and there are many wrecks upon it, because too often the mariners rock the boat."—*Lawson Moore.*

You may think it quite safe to play with one or two inferior brands upon your shelves—brands that show a very handsome profit—but very often an inferior line of cutlery or say inferior paint is the little thing that rocks the boat and endangers the whole stock.

Lowe Brothers' "High Standard" Paints may prove the very ballast that will steady your ship. They win custom and keep custom.

Don't rock the boat.

Weekly Market Report --- Paints

PAINT NOTES.

Linseed oil has gone down in price 3 cents in Montreal, 8 cents in Toronto. These reductions have come as the result of changed conditions in other countries.

White lead is still very scarce in all sections.

Alarm is felt over advices from Belgium, which indicate that trouble may be experienced in getting fall shipments of glass.

MONTREAL.

Montreal, July 18.—While there has not been any further advance in the price of white lead this commodity occupies the limelight on the paint stage by reason of its scarcity. "There is not the lead to be had at any price," stated the manager of one paint house. "We are getting some, but not nearly as much as we need."

The market at present is a little peculiar. Linseed oil, for instance, has dropped slightly in price. Yet there is no desire on the part of the handlers to sell this. The falling market across the border has made a lower price seem necessary, but the difficulty experienced in getting supplies here makes all manufacturers anxious to keep the supplies which they now have.

Only Filling Part of Orders.

Generally the paint business is good. The mid-summer quietness has not appeared yet. Makers almost wish this would come, as then they would be given an opportunity to catch up with their orders. Many are not filling these completely at present, but are sending the dealers a part of the supplies asked, with the statement that the balance of the order will follow later.

Glass still is being carefully watched. The rumor that trouble in Belgium may cause a higher price for glass has caused a good deal of early buying. Locally supplies are none too good, but there is yet enough in the warehouse to meet the present demand.

Linseed Oil.—While prices have dropped three cents, being now generally quoted at .97 and 1.00, there is yet a scarcity in the supply. The crushers seem unable to meet all the demands put upon them. They expect to catch up shortly, but for the time there is no surplus supply. A good deal depends upon the Canadian and the American crops.

Turpentine.—No disquieting features are noted here. The supply, both local and in Savannah, seems good. Prices are generally quoted at .68.

Lead Exceedingly Scarce.

White Lead.—Owing to the scarcity of the pig, manufacturers are finding it exceedingly difficult to get the dry white lead which they require. It is not a question of price now, but rather of getting the material at any price. The scarcity of this product, combined with the continuance of the demand for mixed paint, is causing a situation which the manufacturers are meeting by making only part shipments. It is hoped, however, that conditions will improve rather than become worse.

Paris Green.—Great difficulty is being experienced in making deliveries of this, not that the supplies are low, but these are not made up in the form which is desired. Last year the demand was largely for 50 pound drums. This season it is the one pound tins which are wanted, and as the hot weather made it impossible to put these up there is a scarcity. Some who ordered their paris green in the tins will have to accept it in other forms, it is said.

Glass.—The whole market hinges on the political situation in Belgium, and is practically marking time just at present. All are waiting to see what will happen between the Flemish and the Walloon element. The impression here is that prices will advance. Considerable buying is being done on this supposition.

TORONTO.

Toronto, July 18.—Business has been extremely brisk in practically all lines. The mid-summer slump, which generally arrives some time in July, has not given any signs of its impending arrival. "Guess we are going to have no slack season this year," said one manufacturer. "We haven't quite caught up with back orders yet."

The feature of the market was the drop in linseed oil. The first decrease came suddenly and rather unexpectedly and the other followed with a rapidity which gave to it the element of surprise also. Turpentine is also a little easier in price. Other commodities have not changed although rumors are heard of impending advances. Certainly there is no sign of weakness in other lines.

A Big Decline.

Linseed Oil.—In Wall Street parlance, the bottom has fallen out of the linseed oil market. There have been two reductions in price since last writing. The first came on Saturday when the price was made $1.04 for raw and $1.07 for boiled—a reduction of 4 cents. To-day a second reduction of the same size was announced so that now the price is $1 and $1.03.

This is due to a number of causes. The supply has been increasing while, according to reports, the demand has fallen off some. English oil has been easing off in price. For all of which reasons, the price here has gone down, for how long it is impossible at present to foresee.

Turpentine.— The price quoted here now is 67 cents. There is a fair demand.

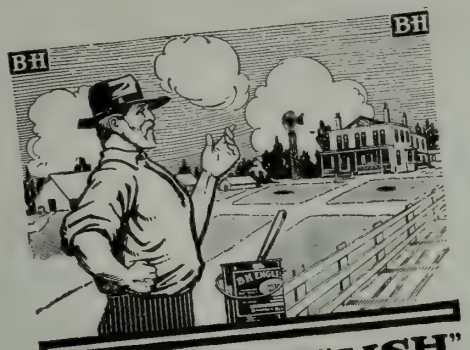
White Lead Firm.

White Lead.—There are no particular developments to report in the white lead situation. The price remains firm and there are rumors to be heard that another change to a higher price level is pending. The demand is strong and, in consequence, the supply on hand is still small. The shortage promises to last some little time yet.

Alarm is Felt.

Glass.—Advices from Belguim are far from encouraging. The glass manufacturers anticipate that there will be social disturbances in the fall which will partially, if not wholly, paralyze industry in that country. In consequence of these advices, the importers are not at all sanguine in their outlook. Large shipments will be needed in the fall and, if anything occurs to interfere with these, the results will be indeed serious.

Putty.— Trade remains steady with prices the same:—Standard bulk in casks, $2.40; in 100-lb. drums, $2.55; in 25-lb. drums, $2.65; bladder in barrels, $2.80. Pure putty prices are as follows: Bulk in casks, $3; in 100-lb. drums, $3.40; in 25-lb. drums, $3.50; bladder in barrels, $3.40.



Prepared Paint.—There is a good demand, sorting orders bulking largely. Usually the sales of paint during July are small but there has been nothing diminutive about the business done so far.

WINNIPEG.

Winnipeg. July 16.—As regards prices there is nothing new to announce in the paints and oils departments. Linseed oil and turpentine have been steady for some weeks and there is nothing to indicate a break.

Unsettled weather has to some extent affected the retail trade during the past two weeks, but this will only mean increased activity in the immediate future.

Wholesalers report a very active sorting business and there has been an active demand for Paris green and lubricating oils.

SAID THE FARMER.—"I never look for bargains in Paint—and I wouldn't buy cheap paint at any price. My time is worth money to me, so I use BRANDRAM-HENDERSON, Limited, "ENGLISH" Paint wherever I have a job of painting to do. I find B-H "ENGLISH" Paint spreads easier than cheap paint—I can do my painting quicker with it and I find too that it holds its color longer—so I don't have to paint so often. All in all, therefore B-H "ENGLISH" is the cheapest of all the paints I have used. 88

Covers Canada From Coast To Coast

Brandram-Henderson, Limited, "English" Paint is 70% Pure White Lead—30% Pure White Zinc—mixed ready for use, with Pure Linseed Oil, Pure Turpentine and Dryer, and nothing else.

There is a B.-H. "English" Paint for every color you wish to paint. Ask for a sample card. 86

Said the Architect—"I have specified B-H ENGLISH PAINT because I have found it the best, and the cheapest in the end. It costs less to apply—covers more surface—protects better—and holds the color longer.

It is the 70% Pure White Lead and 30% Pure White Zinc Paint —an Ideal formula.

Then, too, it is guaranteed by BRANDRAM-HENDERSON LIMITED —and the guarantee is printed on the can.

It is the kind of Paint for **your** house, sir. 77

SAID THE MAN WHO BUILDS.—"Yes sir, I am going to use Brandram-Henderson, Limited, "English" Paint. You don't suppose I would put so much good money in a new house and then paint with cheap paint. That would be absolutely wasteful, wouldn't it? I am building and painting for permanence—and B-H "English" Paint is the only paint I shall use. None but the best for mine. It wouldn't be fair to the house." 87

The paint with the guarantee. And the guarantee—signed by BRANDRAM-HENDERSON LIMITED—goes on every can.

50 shades, including black and white. 78

SAID THE HOME OWNER—"I told the contractor I wanted a first class job—and I insisted on his using B-H "ENGLISH" Paint. I knew that the perfect formula for color, spread, durability and economy was 70% B. B. White Lead and 30% Zinc White, and I knew too that I could get this formula only in BRANDRAM-HENDERSON, Limited, "ENGLISH" Paint. So I paid a fair price and I believe in B-H "ENGLISH" I got the best paint obtainable in Canada—in fact, the best obtainable anywhere or at any prices". 89

Here are some of the new series of newspaper ads—five inch double column—running in Canadian papers in the interest of Agents for B-H "ENGLISH" Paint.

Back of every can of B-H "ENGLISH" Paint which goes on the shelves in your store is an active force of reasonable, practical, effective selling-helps.

B-H "ENGLISH" Paint is 70% Pure White Lead—30% Pure White Zinc—100% Pure.

If there is no B-H "ENGLISH" Paint agent in your town write for agency proposition.

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

In your Paint Department a clean-cut quality stock is a prime essential for successful trading.
When such goods as these are backed by strong co-operation on the part of the manufacturer—as in the case of

Minerva Paints and Paint Specialties

the famous British Brand—success is assured.
Feature the MINERVA line, which has held pride of place for every kind of painting for 78 years.
Ask any Minerva Agent about the quality of Minerva products and direct selling helps. Names furnished on request.
Every can contains Full Imperial Measure.

HOW ABOUT YOUR PAINT OIL DEPARTMENT?

If you could find a way to increase the profits in your paint oil department you would at least investigate it, wouldn't you? Then why not take the time NOW to increase your paint oil profit by investigating the

BOWSER PAINT OIL SYSTEM

We have installed systems for many of your fellow merchants—it pays them—it will pay you.

You can get one outfit or a dozen, just as your requirements demand. You don't have to invest much money but you get enormous returns.

The Bowser not only prevents all waste and over-measure, but it gives your store tone and attractiveness. It draws trade because you can give better service and cleaner oil. The pumps measure the oil directly into the customer's can—no measures nor funnels. It computes the charge and counts the gallons.

Send a card to-day for free book No. 15.

Paris Green—21½ cents per 112-lb.

Something Good for Your Customers

The modern finish for hardwood floors is wax. But waxing a floor with the old-fashioned paste beeswax preparation is a tiresome job at best.

Give your customers

JAMIESON'S LIQUID FLOOR WAX

Its convenience appeals to everyone.

Made from Hard Vegetable Wax, applied with an ordinary brush, and then polished when dry, it produces a finish that in appearance and durability can not be approached by any beeswax preparation.

Your customers would appreciate it.

MURESCO

30,000,000 POUNDS SOLD IN 1911

WHY?

BECAUSE

It covers more surface and covers it better with one coat than any other similar material on the market.

Of the nature of its ingredients it is highly sanitary.

It does not rub off, crack, peel, blister or show laps when properly applied.

It is so easily applied.

Every lot manufactured is carefully tested before shipping.

Send for Color Cards and Literature.

Benjamin Moore & Co., Limited

TORONTO NEW YORK CLEVELAND CHICAGO

Stephens

"WA-KO-VER" Stains

Give Good Results

both to the dealer and the user.

They have a **remarkable toughness** and **elasticity** and can be washed with soap and water without impairing the brilliancy of their finish.

These stains do not cover up the natural beauty of the wood—they emphasize the grain and impart any desired effect.

Just as we claim or money back—that's our guarantee. Write for our agency proposition and color cards.

The "RENFREW" Handy Two-Wheel TRUCK SCALE

"A Convenience and Protection for Farmers"

This is a scale that pays the dealer A VERY ATTRACTIVE PROFIT—a scale that is becoming more and more popular every day with farmers.

It is absolutely accurate and has many advantages over the common scale.

With this scale in his possession the farmer knows the exact weight of the products he is selling—he is armed against short weights.

The "RENFREW" TRUCK SCALES are GOVERNMENT TESTED and have been awarded their GOVERNMENT CERTIFICATE without question, and are backed by our WRITTEN GUARANTEE to be just as represented, and to give a long, reliable service. Capable of weighing anything from a single pound to 2000 pounds.

The "RENFREW" TRUCK SCALES are rigidly built and will stand all kinds of rough usage.

LET US SEND YOU ONE. Show it to every farmer who comes into the store, and see how many you can sell.

Write for Circulars and prices NOW.

Renfrew Scale Co.

RENFREW, ONT.

The man with the stock on his shelves gets the business

Now is the time of the year to watch your paint stock closely. At this time your customers want their paint or varnish or colors, or whatever they need, at once, and so if you let your stock run low, they will buy elsewhere.

So go over your stock carefully. Send us your orders for "fill-ups" and we will make prompt shipment.

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

If, for any reason, you have never given this line a prominent place on your varnish shelves, write us to-day for prices.

Whether it is on one of the Big-Five listed at the left or an item of less extensive use—

Whether it is in your interest, from a sales and profit point of view—

The interest of the painter who does the work—

Or the satisfaction of the "man who pays the bills"—

The trade mark label of Berry Brothers, Ltd., has a deep significance that grows out of its continuous use for over fifty years, plus the wide publicity given to it by extensive advertising.

That trade mark **must** "make good" — everywhere, every time.

TRADE MARK LIQUID GRANITE — For finishing floors in the most durable manner possible. There is no substitute.

WOOD FINISH LUXEBERRY — For the finest rubbed (dull) or polished finish on interior woodwork. It has for upwards of 50 years been the standard.

ELASTIC INTERIOR FINISH — For interior woodwork exposed to severe wear. Stands the action of soap and water to an unusual degree.

ELASTIC OUTSIDE FINISH — For front doors and all other surfaces exposed to the weather. Great durability under most trying conditions.

SPAR VARNISH LUXEBERRY — For ship spars, decks, yachts, launches, canoes and all other surfaces exposed to wind, wave or weather. Has never turned white. It has stood years of test in actual service.

THESE are but five out of the most complete and extensive line of Varnishes, Shellacs, Japans, Lacquers, Stains, Fillers, and Dryers offered by any manufacturer.

You'll Find it in the W. & B. Line

Every little twist and turn of "W. & B." Wrenches has a meaning, resulting from some specific requirement. "W. & B." Wrenches are designed to the minute and have the distinction of holding first place wherever wrenches are used.

Look up some unusual wrench job, then notice the trade mark on the wrench. Ten to one it's a "**W. B.**"

The demand for these wrenches is growing as a result of satisfactory service. Tons of "W. & B." Wrenches are shipped to every part of the globe to meet the demands of exacting wrench service.

Get them from your nearest jobber or send order direct.

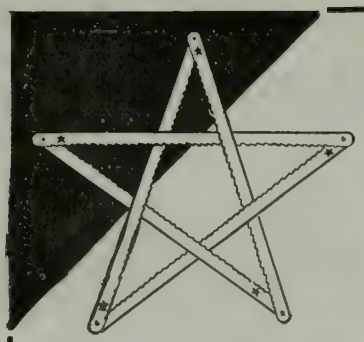
The Mechanic Special Service Ladder



This ladder is all that its name implies and is highly prized for use in the shop or wherever a handy ladder suitable to sustain a great weight is required. The legs are connected by rounds so that one or more may make use of the ladder at one time, and the rounds and steps are staggered so that a plank can be placed through and find support every six inches. The ears are of malleable iron and steps are trussed.

If you want to increase your profits, that ladder will help you.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

No Dirt Can Lodge in the "All-Metal"

It Stands to Reason

that an all-metal washboard made in one piece will outwear the old-fashioned wooden kind many times. Then if this is a fact, the all-metal washboard is the most economical. This feature alone is one that prompts the housewife to buy MEAKINS' SANITARY WASHBOARDS when the dealer shows her this modern production in the art of wash-board making. Meakins' Sanitary Washboards give no chance for dirt to lodge or metal to loosen to scratch the hands. The "All-metal" has won favor for its practicability, and sanitary construction. It will not rust or corrode. Send for particulars and prices.

Does Your Mind Ever Feel Sluggish?

There are hundreds of patent medicines which claim to cure the sluggish mind.

It has been discovered by hundreds who are susceptive to this trouble, that the most successful and permanent cure is to join the sales force of MACLEAN'S MAGAZINE, and take subscriptions for this great monthly.

It gives relaxation from your regular routine of work. It is healthful, pleasant and educative. It develops you physically and mentally.

Hundreds of men and women are to-day earning $10.00, $12.00 and $15.00 per week during their spare hours, by taking subscriptions for MACLEAN'S MAGAZINE, who a year ago, some only six months ago, were wasting their valuable spare hours doing nothing.

Work never killed any man.

Taking subscriptions for MACLEAN'S MAGAZINE is pleasant, healthful work and pays you better than you think.

Join our organization now. Do not put off writing for full information to

Not an Enterprise for the "Quitter"

"If there is one enterprise on earth," says John Wanamaker, "that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick like a barnacle on a boat's bottom

"He must know before he begins it that he must spend money—lots of it.

"Somebody must tell him that he cannot hope to reap results commensurate with his expenditure early in the game.

"Advertising does not jerk; it pulls. It begins very gently at first, but the pull is steady. It increases day by day and year by year, until it exerts an irresistible power."

Pilabrasgo Portables

PILABRASGO

Great Big Sellers

¶ You can ginger up your sales a lot by featuring these splendid goods. And the quicker you get them in the better start you'll have.

¶ This season's line is by far the best you've ever seen. Simply *telling* about it doesn't begin to do it justice. There's absolutely nothing like it on the market. Wait till you see it—you'll say that yourself.

¶ Come on then. Let's get it going for a whirlwind season Canada's due for a big Portable business. Let's get it this year.

¶ Let's start it *now* while everything's brand new. We've got the photographs all ready for you. Want to see them ?

THE PITTSBURGH LAMP, BRASS AND GLASS CO.

Canadian Representative

R. E. Davis, 119 Wortley Road, London, Ont.

General Offices and Factories, Pittsburgh, Pa., U.S.A.

There Will Be A Large Demand
For the
CORONA ROASTER
After Once Introduced

This is a roaster that has become indispensable in thousands of homes.
It is **very attractive,** and is sure to find ready buyers in your vicinity.
A double air jacket, yet all of one piece of steel. **The hard, glossy enamel is as easily kept clean as a dinner plate.** Has no seams to cause trouble, or creases to make it hard to clean.
Absolutely guaranteed and backed by our long retained reputation for **high quality.**
Write us for catalogue and full particulars.

There Are Lots of Men With $70.00

Quite a few go to your store and could be tempted by a "Ross" High Velocity Rifle.

In fact, every sportsman, who has the price, will look longingly at this arm and require very little coaxing to buy it.

And this one sale is not a bad day's work!

If you have not any in stock, write at once for discounts and full particulars.

ROSS RIFLE CO. - QUEBEC

ROBERTSON SOCKET HEAD

WOOD SCREWS

Have a decided advantage over other styles of wood screws. By having a square hole, into the centre of which a specially designed screwdriver fits snugly, it does away with all possibility of slipping, which often proves disastrous to the screw, and wastes a considerable amount of the workman's time.

They will sell on sight—get our prices at once.

We also manufacture high-grade Hand Drivers, Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails and Wire.

SEND FOR CATALOG.

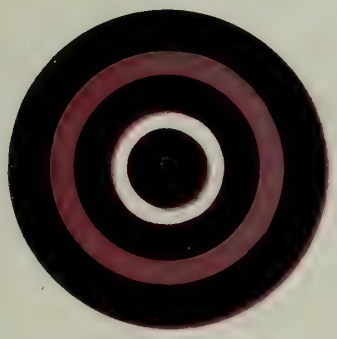
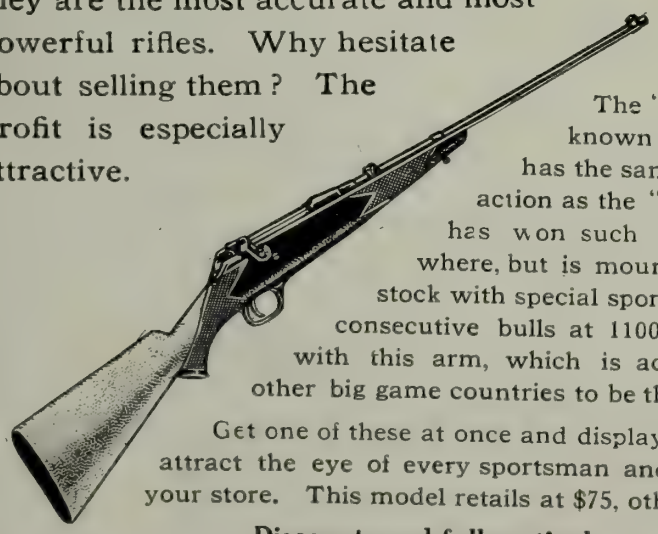
THE MACLEAN PUBLISHING COMPANY, LIMITED



Vol. XXIV. Publication Office: Toronto, Canada No. 30



July 27, 1912

The "ROSS"

280 High Velocity Sporting Rifle

The "Ross" Rifle has won the long range championship of the world. It has gained such a good reputation that it requires but little effort on the dealer's part to effect a sale. **"Ross" Rifles** have proved that they are the most accurate and most powerful rifles. Why hesitate about selling them? The profit is especially attractive.

The "Ross" 280 high velocity—known also as the Deerstalker—has the same barrel and same breech action as the "Ross" Match Rifle which has won such fame at Bisley and elsewhere, but is mounted on handsome sporting stock with special sporting sights. Twenty-seven consecutive bulls at 1100 yards is a sample record with this arm, which is acknowledged in India and other big game countries to be the best to anchor any game.

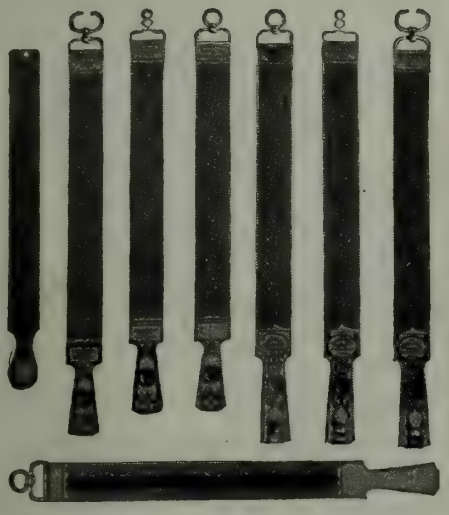
Get one of these at once and display it in your window. It will attract the eye of every sportsman and draw new customers to your store. This model retails at $75, others from $25 and upwards.

Discounts and full particulars on application.

The Ross Rifle Co., Quebec, Que.

Big Ben Store Helps

In order to enable Canadian dealers to get the maximum benefit from the Big Ben campaign now running in Canadian magazines, we are packing Big Ben specially for Canadian trade, six in a carton with a full set of store selling helps (two posters, two show cards, two metal signs.)



On an order for 12 we add a solid mahogany display stand. On an order for 24 or more, we print your name on dials, give the posters, display stand, and a beautiful metal sign lithographed in five colors.

Big Ben and his selling helps are being carried in stock by 54 wholesale Canadian distributors. We will be glad to let you have their names upon request. Any will tell you Big Ben is the best made and the best selling alarm that's ever been put out.

In broken and dozen lots, $2.15 less 2%. In lots of 24, $2.05 less 2%.

Here is a Carborundum Product that will Make the Sales Jump

The Carborundum Razor Strop

THE best strop for home or shop—made from the best of selected leather—soft, smooth, pliable. One of the big features of the Carborundum Strop is the Corrugated Sharpening Side—the corrugations and the texture of the leather are filled with the finest of Carborundum powder—this gives a sharpening side that is lightning fast. The finishing side is soft, smooth, velvet-like. The hardware and fitting of the strops are novel and practical—especially the split ring holder. Every strop is backed by the Carborundum guarantee.

More Reliable Than the Windmill

Every Farmer is a Prospective Buyer

At one time the farmer endorsed the windmill as a convenience and necessity. Since then times have changed. New things are constantly taking the place of the old. Such is the case with

The "ECLIPSE" Pumper

With it the farmer does not have to depend on the wind or the weather —he has pumping power when he needs it.

The "Eclipse" will pump as much water as a 10 or 12 ft. windmill running in a 20 mile wind. It uses about one pint of gasoline per hour, and pumps over 1,000 gallons of water.

This small operating cost will appeal to every farmer.

Put an "Eclipse" in stock and get after the farmers. You will get surprising results.

Write for full particulars.

HIGH-CLASS TOOLS

The measure of your success is governed by the class of goods you have to sell, for there is something in the appearance of a well-made tool which carries to the mind a conviction of its efficiency. *That is "Selling Force," while the actual working qualities keep it sold.*

Particularly true is this of the Disston Saws and Tools, and in calling special attention to the

Disston PLUMBS and LEVELS

you will find they stand in a class apart from others in regard to Quality of Material, Workmanship, Efficiency and Beauty of Finish.

The simplicity of the adjustment feature is one which will appeal to all users. Operated by double jamb-screws, easily accessible, the adjusting requires but a moment's time, is firm and secure, there being no spring tension to get out of order, nor can the screws rust in position.

The stocks are made of selected lumber, long and well-seasoned. All brass ends are of solid drop-forged metal, not hollow castings.

"DISSTON"
is a guarantee of

Marlin Hammerless Repeater
Model 28, 12 Gauge, 6 Shots, Matted Barrel

SELL THE GUN EVERY SHOOTER WANTS! —THE BEST PUMP GUN IN THE WORLD

THIS new Model 28 Marlin is in every way the best repeating shotgun made. Has no objectionable humps or bumps, no holes on top for gas to blow out through or water to get in; its Solid Breech is not a thin shell of wood but is **solid steel** inside and outside; it has a neater action and a more finely modeled buttstock, better lines and more style than any other similar construction. **It is the safest breech loading shotgun ever built.** Note these features:

Hammerless; Solid Steel Breech, inside as well as out; Solid Top; Side Ejection; Matted Barrel; Press-Button Cartridge Release; Automatic Recoil Hang-Fire Safety Device; Double Extractors; Take-Down; Trigger and Hammer Safety.

Cartridge Release Button and Matted Barrel on all *Marlin* Hammerless Shotguns

The barrel is handsomely matted on top for its entire length, exactly the same as our highest grade hammer guns. The matted barrel prevents radiation of heat from top of barrel or reflection of the sunlight from interfering with shooter's aim. **This high-grade and exclusive feature has never before been furnished on standard grade repeating guns.**

Shooters would willingly pay more for this gun—it's worth more than any other—but it is priced at $22.60, **so you can sell it and make a good profit.** Place your stock order now—you will need a good supply.

Ask us for circulars for your trade—or price lists or electrotypes—free on request.

HIGHEST AWARDS RECEIVED AT ALL EXHIBITIONS WE HAVE TAKEN PART IN

Plymouth Cordage Co.
ESTABLISHED 1824

North Plymouth Mass. July 6th 1912.

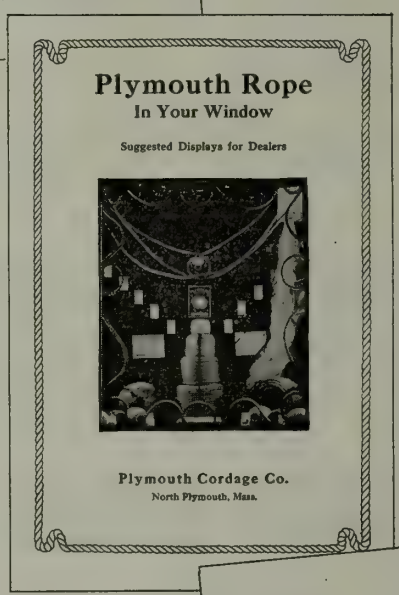
SUBJECT: FREE ADVERTISING SERVICE.

R. Godfrey & Son,
Jonesville, Mich.

Gentlemen:

We are glad to send you, as requested, the Plymouth advertising material consisting of a bank of Manila hemp, various display cards and a quantity of illustrated booklets.

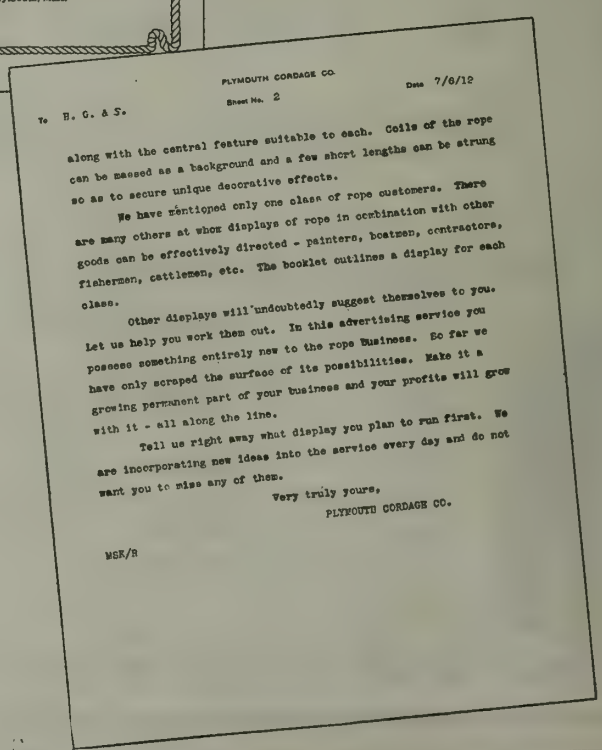
To help you in putting the display material to the most effective use we are sending you also the illustrated booklet "Plymouth Rope In Your Window." It contains numerous suggestions for the planning and arranging of window displays and outlines sixteen different displays of rope and other goods. We plan to send you outlines of additional displays from time to time.



You will do well to run several displays for the farmers, who you say constitute a good percentage of your rope customers. The hay carrier, wire-stretcher and stump-puller are excellent for central features because their actual manner of working can be easily shown in the window.

The sale of your pitch forks, rakes, fence wire, spades, sledge hammers, axes and saws can be stimulated by displaying them

We Show You How



Set the Plymouth free advertising service at work in your store —it builds trade.

No great demand on your time. You can install a Plymouth window the day you receive the display material — our booklet shows you how.

Our letters will help you to work out questions peculiar to your store and community. Our bulletins will give you plans used by other stores.

Plymouth dealers can secure this service now by request—others as soon as they stock the rope. Write for full information.

PLYMOUTH CORDAGE CO.
Sheet No. 2
Date 7/8/12

To H. G. & S.

along with the central feature suitable to each. Coils of the rope can be massed as a background and a few short lengths can be strung so as to secure unique decorative effects.

We have mentioned only one class of rope customers. There are many others at whom displays of rope in combination with other goods can be effectively directed - painters, boatmen, contractors, fishermen, cattlemen, etc. The booklet outlines a display for each class.

Other displays will undoubtedly suggest themselves to you. Let us help you work them out. In this advertising service you possess something entirely new to the rope business. So far we have only scraped the surface of its possibilities. Make it a growing permanent part of your business and your profits will grow with it - all along the line.

Tell us right away what display you plan to run first. We are incorporating new ideas into the service every day and do not want you to miss any of them.

Very truly yours,
PLYMOUTH CORDAGE CO.

Sternauware Summer Specialties

The Cocktail Mixer

A NEW IDEA in Sternauware, so simple that you wonder why nobody thought of it before. The ingredients of one or several cocktails having been carefully poured into the shaker, it is closed and the separate elements of the appetizing drink are shaken into delightful unity. Then the knob is turned back and the cocktails are poured out. They, on Sternauware Trays, may be served to an appreciative party on the veranda or the lawn.

This Mixer and the Milk Shakers illustrated herewith are made in nickel-plate, handsomely finished and well built.

THE STERNAU SELF-CLEANING REVERSIBLE FILTER WILL APPEAL TO YOUR TRADE, FOR IT GUARDS THE HEALTH

THE STERNAU SELF-CLEANING REVERSIBLE FILTER

is superior to ordinary filters in that it is self-cleaning—a patented feature fulfilling a long-felt want.

By reversing the filter every day without taking it apart or off the faucet and then letting the water run through the filter until the water comes out clear, all accumulation is removed. Thus the filter is kept clean.

Illustrating the Filter adjustsd to faucet; also how it can be cleaned daily by reversing without removing from the faucet.

All drinking water should be filtered, for even though the water may appear clear it is not necessarily pure.

Some say to boil the water, but this makes the water both flat and impalatable.

Much disease is caused by not filtering the drinking water.

Therefore it behooves everyone to drink only filtered water, which can be had by using the

STERNAU SELF-CLEANING REVERSIBLE FILTER

Making a Flat World Round

When Columbus set out to reach India by sailing west-ward, he met with opposition and ridicule. He believed the earth to be round.

Wise men held that it was flat—that Columbus was mad—and that he'd fall off somewhere if he departed from established beliefs.

But Columbus' belief found him a continent and made him blessed of memory.

The Business World is flat to some men. Their profit-bearing shores of Opportunity stretch only so far as their grandfathers trod. Custom, superstition and apathy have set them confines which they may not pass.

For instance, they believe the business year is a flat one—not an all-year round of trade, with East joining West, with Spring merging into Autumn—but just two distinct seasons, with sawed-off edges gaping into space.

They confine their activities to a Spring trade and to a Fall trade. To them there is no intervening continent with stores of waiting wealth. Their world is flat. They have not explored the mid-year months of Summer trade. June, July and August are never-never land.

Surely this conception of Summer as a "dull" season is as fallacious as the delusion that the earth was flat. People have just as much money in the hot weather and spend quite as freely as in Spring and Fall. Granted that they are not buying skates and snow shovels in August, yet they are buying staple articles. Furthermore, they have an eye on luxuries and comforts they are counting upon purchasing in the Fall.

The modern Columbus has discovered this Summer Trade—this golden West lying between the known continents of old beliefs. Departing from established habit, many have made their energies and their Advertising an all-year-round proposition.

Keeping up Advertising during the Summer months not only links your Spring and Fall, but produces rich harvests from the Summer months themselves.

Advice regarding your advertising problems is available through any recognized Canadian advertising agency, or the Secretary of the Canadian Press Association, Room 503, Lumsden Building, Toronto. Enquiry involves no obligation on your part—so write, if interested.

Secrets of Success in Window Dressing

Love of the Work and Co-operation are Assets Which Lead to Resultful Displays—How Display Can be Arranged at a Small Cost—The Author of This Article does Not Spend Over Five Dollars a Year, But Manages Nevertheless to Produce Elaborate Window Trims—Other Pointers.

Written for Hardware and Metal by R. H. Thornhill, of P. Hymmen Co., Berlin.

There is no doubt whatever that window dressing is not only now receiving the close attention it deserves, but it is more and more becoming recognized that it must be in harmony with the daily or weekly newspaper advertising. One strengthens the other. In fact, show me good newspaper advertising and ten chances to one it goes with good snappy, up-to-date window displays.

This is due to the closer attention given by stores to changing displays much more often and to a great extent due to the energetic steps taken by manufacturers to supply proper window displays and accessories, including showcards and cutouts.

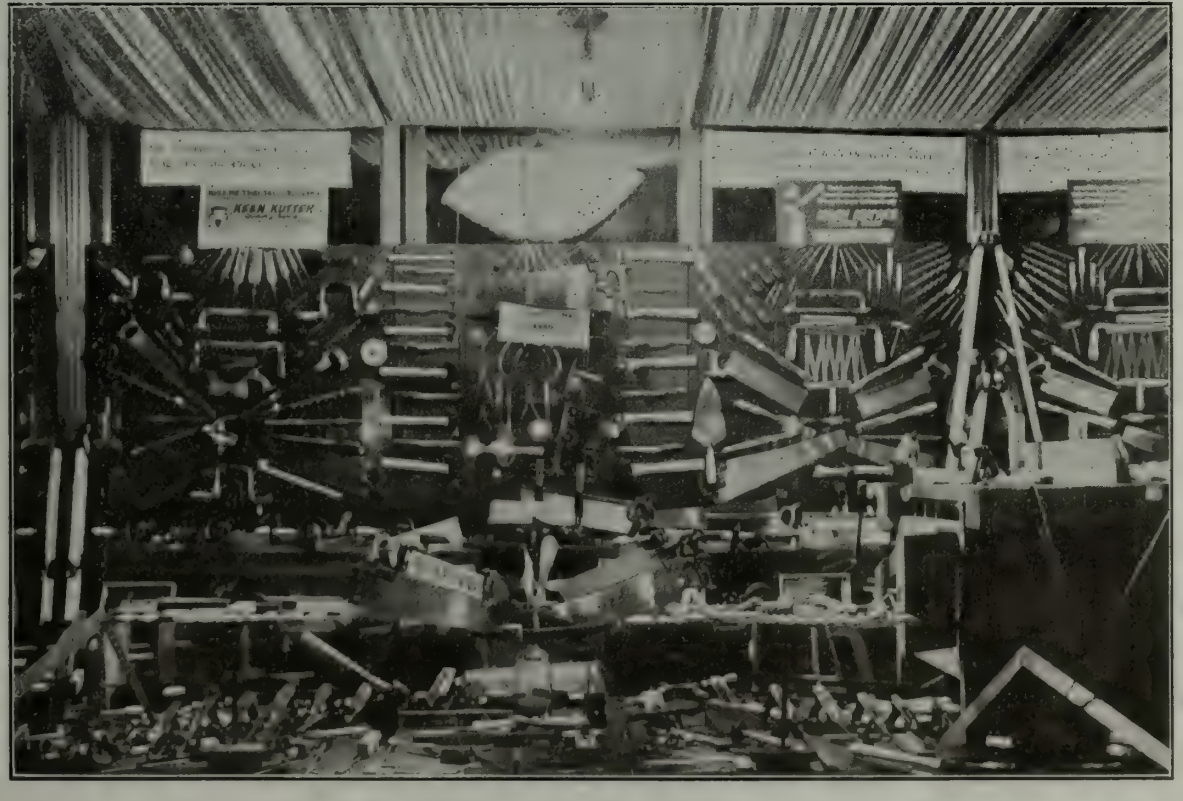
Window dressing is an art. It rises or falls just as one throws ones whole heart into the matter. Some of us do it because it is part of the daily business, some of us do it because we love the work. Number me among those who glory in a fine display. I take the stand

The writer of this article has won first prize in Hardware and Metal's Christmas window contests, for places over 5,000, for two consecutive years. In the accompanying article he sets forth some of the plans which he follows. They are practical and well worth consideration. Mr. Thornhill's statement that his expenses for a year do not exceed five dollars is one of distinct interest.

---

that as, to a great extent we are judged by the company we keep, so is the modern retail store judged by the window displays. For, as the eye is the index to the mind, so is the window the index to the store, the stock, and the policy. Some displays stick out like a sore thumb; some simply are there and attract no attention. The ones that stick out are an investment, those that simply exist to fill up the window are an expense pure and simple.

Now as the old French saying is "to get back to our muttons"—in my judgment the best results are to be obtained when the windows are cased in at the back; I use steps and pedestals with various floor coverings to change the color and arrangements.



The Material Needed.

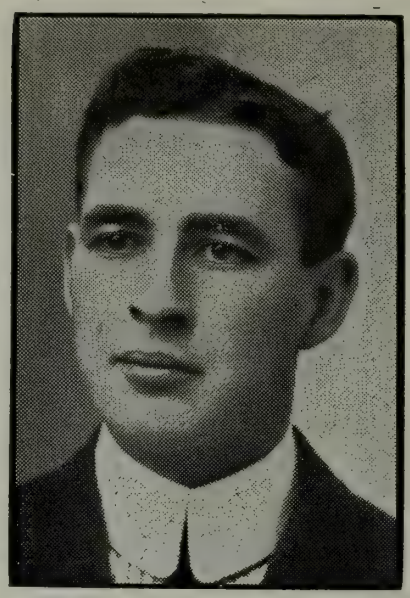
An original investment in the spring of twenty-five yards of cheese cloth or colored cotton, or even cheap, black or colored velveteen lasts the year with overlays in strips of a good color.

Many of my windows, owing to this, do not cost a cent above the initial cost of materials.

Keep Tab on Sales.

Strange as the figures may seem, I figure my window display cost to be about five dollars a year. It is not the expense that stands between good and bad windows, it is the "Know How"

A tool window recently dressed by R. H. Thornhill—It presents a complete assortment of tools, arranged in most skillful manner.



the chief ingredient in this being a love for the work, plus good stock.

We know what our windows do, because we are in direct touch with every sale through the cash registers and a good system of departmental dissection of daily sales.

I am a strong believer in the "One Line" window display. It tells the tale and tells it in clarion notes that are heard.

I am fortunate in being able to get individual window display cards from one who loves that work just as much as I love window dressing, and good showcards mean a lot, even with the best windows. They focus the attention on a word or sentence that tells the story briefly, but convincingly.

The simpler they are the better; in our trade TONE counts, catering as we do to the medium and better class of trade of a large community.

R. H. Thornhill.

We price everything in plain figures in the window and in the store. We have but one price, the lowest possible for cash. In our windows, however, we use a uniform card printed in two colors embodying our trade name in the same design as figures in all our newspaper advertising, in fact we have cards reading, "As advertised to-day in the News Record."

I cannot refrain from here expressing my idea that what success has come to me in window dressing is due to my love for the work plus the hearty and continuous support of the members of the hardware firm I have the honor to serve. That means a lot as any window dresser will tell you. I wish "Hardware and Metal" every success in its laudable desire to help the entire trade to better realization of the importance of good window displays and anything I can do to help on the good work please call upon me.

Stimulating Trade in Midsummer

Dealers Should Take Measures to Ward Off the Slackness—Work Hard and Feature the Right Kind of Goods—No Reason Why Business Should Not be Kept up to the Notch—Methods of Maritime Firms.

Down in the Sunny South, the darkies put knots into their kinky hair to scare away witches. The same manner of hair dressing is resorted to if the idea gets into Sambo's head that someone is "digging roots" for him. It is a talisman or a charm to ward off evil. The average baseball player is equally careful to break up hoodoos and jolt jinxes. If a team discovered there were thirteen men seated on one bench, they would expect to lose thirteen games in a row. Ever see a player stride up to the plate with his fingers crossed? The writer has; and he was a big leaguer at that.

Delusions, of course, and of the worst kind. But darkies and ball players are not the only ones who bring delusions. Plenty of retail merchants—and many of them hard-headed hardwaremen too—believe that business is going to fall off when the summer season arrives. They take it for granted that when Old Sol turns on full power, the retailer will see only such customers in his store as are driven there by dire necessity. Unlike the darky and the ball players, however, they do nothing to ward off this "mid-summer hoodoo." They sit down resignedly and wait for the fall with its usual rush of business.

And yet there is a charm to ward off summer slackness. Work a little harder instead of a little easier and feature the right kind of goods. There is this much truth in the idea that mid-summer brings a slackening trade; people do as little as possible and are inclined to let shopping slide. On the other hand, the warm weather creates certain conditions which open possibilities for trade in certain lines. By taking advantage of these conditions, the hardwareman can make enough sales to cover what he loses in other ways.

People leave town on vacations, it is true. Statistics show, however, that there are never more than 10 per cent. of the population away from any one place at one time. When people go to summer cottages, they generally find it necessary to buy more articles in advance than they would have required had they stayed at home.

It is interesting to note the methods adopted by progressive dealers to fight off the depression. With the prospect of slackness, they find it necessary to cope against it by making extra efforts to induce trade. A representative of Hardware and Metal made a tour of a number of important places in New Brunswick within the last week and found that a number of firms were conducting effective mid-summer campaigns.. The following despatch tells of the methods followed by these firms:—

St. John, N.B., July 22.—The windows of the local hardware stores tell their own story, and the advertising matter sent out or used in the daily press adds another chapter while the climax is found in the jingle of the cash register and the recording of increased sales. The plan of campaign is an extensive one and is carefully attended to, for with warm weather and holiday thoughts, it is difficult to cause the trend of mind of the public to turn to making purchases of hardware goods. But dealers realize the advantage they have over others, and hence their action in featuring such lines as are needed for outings, about summer homes, camping trips, or on the farm. By continually "boosting" the same, they find that their efforts have proven satisfactory.

For instance the firm of Emerson & Fisher put in a hammock window in their store on Germain street which attracted considerable attention. Those who knew the delights of summer life aided by having a hammock or two about the premises were envious of the cosiness, ease, and picturesqueness of the scene. Special values were advertised and good sales resulted. Tennis supplies, rackets, nets, tapes, covers, etc., were featured and a fairly brisk demand developed in these lines.

To take advantage of the fine summer nights, "sleeping out on your back lawn in one of our tents," "getting next to nature," and "living the simple life," etc., was an idea boosted by T. McAvity & Sons, St. John, and Jas. S. Neil & Sons, Limited, Fredericton, both

(Continued on page 46)

Have Prices on Hardware Increased?

Cutlery is Taken up in This, The Sixth Article of the Series on Price Problems —Cutlery is Cheaper Than it Was Twenty Years Ago, But the Cost of Manufacture is Less—The Quality Has Been Greatly Improved—An Important Point For the Dealer.

In starting to compare prices of to-day in any manufactured line of goods with prices of yesterday, one is immediately confronted with serious difficulties. There have been such improvements and changes effected in all manufactured goods that their very nature has been changed The article sold to-day is vastly different from that of twenty years ago. Conditions have changed just as radically. Comparisons, it is said, are odious; sometimes, they are well nigh impossible.

The student of comparative prices is in his element when dealing with certain lines, foodstuffs, for instance. The beefsteak, the loaf of bread and the prune of to-day are the same as they were twenty years ago. The statistician gets along swimmingly when dealing with such unchangeable commodities but when he comes to certain lines of hardware, as Mark Twain would say, "his tail droops."

Consider cutlery. The output of the cutlery manufacturers is radically different from the goods placed on the market two decades ago. Conditions are altogether different. Under the circumstances, how can it be determined whether prices are higher or lower?

As a plain matter of fact, cutlery costs less to-day than it did in the early nineties; and this despite the fact that modern cutlery conforms to more exacting standards and has most certainly been placed on a higher scale. An American contemporary recently made the statement that "silver plated solid steel knives, 12 d. quality, twenty years ago were selling at $3.50 to $4.00 a dozen; now the average price is $2.25. Common goods twenty years ago brought $10.00 per gro., now the price is $6.50." These figures show a rather marked decline. They represent the trend of prices here, in some lines at least, fairly accurately.

Lighter and Neater.

The cutlery of to-day is lighter and neater than the old-time patterns. The designs and styles are more artistic. At the same time, the goods now being produced are more suitable for every-day use, more convenient. The modern article could not have been put out twenty years ago for anything like the price then charged.

Production Costs Less.

It must be borne in mind, however, that the cutlers have made vast strides toward increased efficiency. Methods have been improved. Machinery has lessened the labor and increased the output. Hand work has been largely discounted.

The cutlery industry has indeed made rapid strides. A piece of steel is put into one end of a machine and comes out at the other a pocket-knife. No wonder then that knives can be put out at such low prices. The cutler of to-day has so increased his efficiency that he can produce goods at a much less cost than he did twenty years ago.

Labor is Higher.

Labor costs more, it is true. Wages have advanced probably 25 to 50 per cent. But when a workman turns out one thousand knives in the time that he formerly turned out two hundred, the result is a gain for the manufacturer after allowing a higher wage. Improved facilities and increased efficiency have done this.

Material on the whole is not quite as expensive. Silver is lower. The methods of manufacturing steel have been so wonderfully improved that the cutler makes a big saving there.

On the other hand, the cost of material for specialty lines has been soaring. Mother-o'-pearl for handles has advanced from 30 to 40 per cent. Those who are in close touch with the situation state that further advances are pending in mother-o'-pearl, owing to the big demand and the scarcity. The price of ivory has been doubled. Buffalo horn is very much higher; stag is 10 to 15 per cent. higher; cocobola has doubled in price; ebony has advanced over 60 per cent.; bone is over 30 per cent. higher. It is practically certain that the upward trend in these lines is permanent for the material is becoming harder all the time to obtain. The elephant is becoming scarce and his tusks are hard to obtain. All of the larger orders of animal life with tusks and horns are being thinned out and total extinction is far from an impossibility. Prices are likely, therefore, to become higher rather than lower.

Quality is Higher.

There are exceptions to every rule and there are always individuals to stand out against the general consensus of opinion. As a result there will always be a few individuals to contend that the goods made and sold in the "good old days" are superior in every way to modern products. Some will tell you that the cutlery made twenty years ago was better than the kind sold to-day. Such opinions to the contrary, the improvement in quality of modern products is very marked. People have demanded a better class of goods; and they have got what they demanded.

It is interesting to note that the demand has veered to the better grades; and here we lay our finger on the basic reason for the advance in prices in other kinds of goods. It is not so many years ago that the majority of families used pewter knives and forks for ordinary use, keeping the silver wrapped up in chamois and put away for use when there was "company." How many families use pewter nowadays? The number is, comparatively speaking, very small indeed. Beside your plate you find a variety of knives, forks and spoons, of all shapes and sizes. Each has it's separate and distinct use and woe betide the luckless wight who uses any piece at the wrong time! It is not only in the families of the plutocrats that this plenitude of cutlery is found People who used pewter twenty years ago have cutlery now for every course.

To sum it all up, cutlery is undoubtedly cheaper now than it has been in the past. Conditions have changed, of course, making the reduction a natural sequence of the improved methods of manufacture. Putting reasons and explanations in the background, however, one fact stands out. Cutlery sells for less. In this day of continuous increase, the fact is somewhat unique, and the hardwareman should make good use of it. To sell a better article at a lower price should be a comparatively easy feat.

Play the price argument strong with prospective customers, Mr. Dealer.

WANT PREFERENTIAL DUTY.

It is reported that a deputation of Welsh tinplate manufacturers waited upon Hon. Geo. E. Foster in London the other day and urged upon him the advisability of Canada putting a five per cent. duty on American plates. There has ben more or less agitation in that quarter for some time. Recently a deputation presented facts to Lord Strathcona bearing on the rapidity with which the American tinplate manufacturers have been gaining the upper hand on the Canadian market. It was shown that United States exports of tinplate to Canada had enormously increased within the last few years. At one time Canada looked almost entirely to Wales for her supply of tinplate, but the trade has been veering most rapidly toward our American neighbors.

The chief reason for this change is that the American home market has been dull of recent years, forcing the manufacturers there to look for export trade. Naturally they turned toward Canada, and, finding the Welsh firmly entrenched, they resorted to the argument of lower prices, always a convincing and potent one.

The tinplate consumption in Canada has developed enormously and is showing every sign of continuing to grow. The question opened up is, therefore, of deep interest.

GIVING FALSE IMPRESSION OF TRADE CONDITIONS.

Under the heading "A hardwareman's experiences in Canada—some queer deals," an article appears in the June 28 issue of the Hardware Trade Journal, of London, England. It is a recital of the numerous occasions on which the writer, ostensibly an Englishman embarked in the hardware business in Canada, has lost money either through the sharp practices of customers or the purchase of poor quality goods. After careful perusal of the article, one sees that the writer, no matter what his intentions may have been, has not conveyed the impression that his misfortunes were due to trade conditions in this country, but instead has fixed upon himself the odium of poor judgment. Cheap quality goods are offered for sale in all countries, and it takes a discriminating buyer to escape being loaded up occasionally with "stickers." Also the "dead beat" and the bogus cheque artist are found in all climes, persistently endeavoring to ease the bank rolls of trusting merchants. Credulity inevitably leads to losses.

However, all who read or skim through this sketch may not draw careful conclusions. Seeing a column and a half of solid matter, filled with complaints and the recital of instances where the writer has been "bamboozled," many readers will get the impression that pernicious trade conditions pertain in Canada, that it is a land swarming with sharpers and manufacturers of cheap goods. It is hardly necessary to state that such is not the case. Trade in reality is in a particularly healthy condition in Canada. It is developing rapidly, and good profits are being made. Idleness is the school from which crooks graduate and, as everyone is busy in this country, we have comparatively few of the smooth members of society who live by preying on their fellowmen. We desire also to emphatically protest against the supposition that the class of goods sold here is cheap. The output of Canadian factories is second to none.

The article in question is one of a series. We trust that the writer in future instalments will proceed to tell of the many bright sides to the hardware business in Canada. He should not find it hard to secure the material; and by doing so, he may correct false impressions created by this dismal diatribe.

OVERCOMING OBJECTIONS TO PRICE.

Preeminently, perhaps, the series of articles on Price Problems is proving this—that while there has been an advance in the price of many lines, this advance has been made necessary by the higher quality of the goods—their enhanced beauty and serviceability. This is a thing which many dealers might well bear in mind.

When a customer complains of the price which he has to pay for a certain article, it would be well not to say, "Yes, the price is higher than you had to pay a few years ago, but then everything has gone up." Forget for a time that everything has gone up. The customer knows that to his sorrow. Meet the argument differently. Say, "yes, you have to give more for the article now than you did, but the article gives you more now than it did."

Back up that statement. Just show what the old time article was like. Show how it would last, what protection it gave, and how it looked. Then show the article of to-day. Show where changes have been made—where it has been improved along the lines of art and service. The customer will understand such an explanation. Exactly what would have to be said, would, of course, differ with the different articles—but roughly there are the two points which might be brought out. The increase in beauty and the increased efficiency. Both appeal to people of this year of grace. Perhaps something might also be said of the high cost of raw material—which, of course is helping to keep prices up, but the others are the points which will interest the customer most.

POINTED EDITORIALS.

In summer days prepare for fall.

This latest effusion of the fly campaign poet is enough to make Tennyson turn in his grave.

Swat, swat, swat,
Near the garbage pail, I sit.
I would that my arm could swat 'em all,
The flies that arise in it.

The Value of a Dollar

THE high cost of living has become the predominant question of the present day. It affects everyone, great and small, rich and poor; and it affects us in a more vital way than any other problem.

In most lines prices have advanced very materially of late years, in fact the general increase in the cost of living has been, so statisticians agree, about 33 per cent. in the last two or three years. This is indeed an alarming state of affairs, and it is no wonder that the common expression of the face of Pater familias nowadays is one of deep anxiety.

It is not so much that prices have gone up rapidly as that money has depreciated in purchasing power. There has been a glut of gold (if such be possible) on the market of late years, and the result of this abundance has been to make the metal cheap. This is the course most commonly ascribed to the rapid rise in the price of living necessities. The theory has been assailed, but there is nevertheless some ground for the supposition. The production of gold in the sixteenth century is said to have been $500,000,000; in the seventeenth century, $600,000,000, and in the eighteenth century, $1,270,000,000. In the nineteenth century the output was $7,700,000,000; the first half $790,000,000, the second half $6,910,000,000. So far the record of the twentieth century is: 1901-1905 inclusive, $1,611,000,000; 1906-1910, $2,100,000,000. In other words there has been produced more gold since 1900 than there was from the period of the discovery of America to the Californian gold rush, three and a half centuries.

Perhaps the most striking evidence of the loss of value that the almighty dollar has sustained is found in the facts recently unearthed by an economist of a retrospective turn. Finding out the number of pesetas raised to finance the expedition of Columbus, he discovered that it was the equivalent of $7,000! In 1492 the sum of $7,000 was sufficient to buy and equip three vessels, provision them for a year and pay the crews for the same period. In 1912 the sum of $7,000 is sufficient to buy a modern eight-room house or start a snug little hardware business. It would meet the cost of plating a very small area on one side of a modern ocean greyhound. It must also be borne in mind that Queen Isabella had to pawn the royal jewels to raise that sum of money. Money was pretty scarce in those days. We know quite a few men in the hardware business to-day who could drop over to the bank and negotiate a loan of $7,000 without any difficulty whatever.

During the last two months, Hardware and Metal has devoted considerable space to this problem of the high cost of goods. A number of staple hardware lines have been taken up in turn and the result to date has been to show that prices have not advanced in the hardware trade. The present selling price in some lines is actually smaller than it was twenty years ago. In others, it has been demonstrated that, while the price is higher, the value of the article has increased in proportion. In other words, the dollar will go as far in buying hardware to-day as it would twenty years ago.

At first thought, one may not be inclined to accept this statement, but the proofs are not lacking. A stove to-day costs about 20 per cent. more than it did twenty years ago, but the stove of to-day is at least twenty per cent. more valuable than the old models. In some lines—plates and sheets for instance—the modern article is sold at a lower figure than in the early nineties, despite the fact that the raw material has nearly doubled in price.

Do Demonstrations Pay? Yes.

Hamilton Hardwareman Recites His Experience—Held Demonstration of Varnish Stain and Business Has Been Increasing Steadily Ever Since—A Demonstration is Coining Curiosity Into Cash—Effectiveness of a Practical Display.

Written for Hardware and Metal by Jas. H. Callaghan, Hamilton.

Do demonstrations pay? This question has often been asked by members of the hardware trade. Our experience has been that ,if properly conducted, a demonstration is about the most valuable means of publicity that a dealer can resort to. It brings direct results and, in addition to that, it builds up business for the future.

Speaking along general lines, the demonstration is a measure calculated to insure success. The average person has a big store of curiosity and anything that appeals to their inquisitive sense is bound to interest them. Any street fakir or peddler who starts to demonstrate on a street corner draws a crowd in a moment. People group around him and he can keep them interested as long as he continues to show them the articles he is selling. A good many of them will buy. Put a demonstrator in your store window and a policeman will soon be needed to move the crowds along. Yes, the average person is intensely curious. It behoves the dealer to coin that curiosity into cash.

The way to accomplish this is to announce a demonstration in the store. People will flock to it, if you give the event plenty of advance publicity. Many who come will not be prospective buyers in any sense of the word. There will be a large number, however, who will be genuinely interested. Some will make purchases at once, while others will come back later. In order to attract the real buyers, the dealer can afford to give a certain amount of his time and attention to those who do not give any returns.

An Outgrowth of Progress.

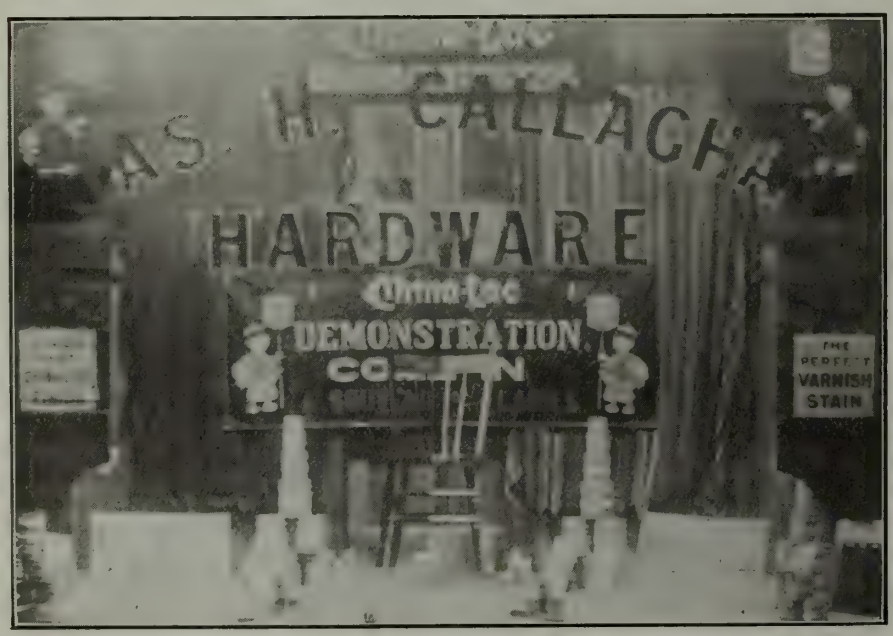
The demonstration is a natural outgrowth of the great progress this world is making. Man's inventiveness is bringing new articles to the fore all the time and is perfecting improvements in old articles and in methods. The things we used a few years ago are antiquated now. A man has to travel fast to keep up with the times. People realize this and they expect to hear of new things all the time. What is more, they are anxious to keep up with the times and on that account will attend demonstrations. They say to themselves: "This man is showing something worth while. Perhaps we had better drop in and see about it."

Other Lines Benefit.

It must not be thought that the benefit is confined to the one particular line demonstrated. When people enter a store they look around. They may have come for the sole object of attending the demonstration, but it is quite certain that they will give the rest of the stock a more or less thorough inspection. They will see goods that they need, articles that they particularly want. Some will buy there and then; others again will defer purchasing but they will come back in the end. A demonstration is, therefore, a measure of general publicity which advertises the whole store and the stock in its entirety.

Planning the demonstration.

It pays to arrange the event well ahead of time and make sure that it is well advertised.



We decided early in May to hold a demonstration of varnish stain and selected Saturday, June 8 as the date. We then started to advertise it, using the store window as the chief medium.

As will be seen from the accompanying illustration, we arranged a display that was in itself a demonstration. A chair that sadly needed re-varnishing was secured and half of it was finished, the other half being left just as it was. This chair was then made the centre of the display and it served as a most effective object lesson of the good results which can be obtained by the use of varnish stain. The contrast between the finished and the unfinished halves was indeed most striking.

A card in the window advertised the fact that we would present a souvenir to every woman who called. An expert was secured to look after the demonstrating.

A Big Attendance.

The attendance was exceptionally large. People came to the store from all parts of the city. We gave roses and carnations as souvenirs and the size of

DEMONSTRATION ADVERTISING.

This window display is a demonstration in itself. The chair, half of which has been revarnished, demonstrates in the most practical way the advantages of varnish stain. In this case, it was found distinctly effective and heavy sales were traced directly to this display.

The demonstration in the store was also eminently satisfactory, a result partly attributable to the window display.

the crowd can be judged by the number of flowers disposed of. We gave away twenty-five dozen altogether.

The results were convincing and quite satisfactory. Many sales were made and we have since been able to trace business directly to the demonstration. Sales were very active for a long time afterward. For two or three weeks we had people coming in and asking for some of the varnish stain we had on that chair in the window. The most striking proof is that OUR SALES HAVE BEEN STEADILY INCREASING EVER SINCE.

Do demonstrations pay? Judging from our experience in the matter, we would say most emphatically, yes.

The Distribution of Store Costs

Is it Possible to Find a Practical System of Assessing the Exact Cost of Handling on Each Article in the Store?—The Opinions of an Eastern Hardwareman on This Important Phase of Retail Merchandising.

Written for Hardware and Metal by James B. Dever.

One of the discouraging things about figuring out an ideal cost distribution system is that the ideal and the practical do not always agree. The theory that each article that passes through the store should bear its exact proportion of the store's costs is perfectly reasonable and might be practical in an Utopian community where trade could be governed by cast iron rules. Under present business conditions, however, there are many things to interfere with the adoption of this system. One of these is the matter of competition, which would make some large holes in such an arrangement. Another is the necessity of selling advertised goods at advertised prices fixed by the manufacturers, which under varying conditions leave profits of different sizes to different merchants.

The lines which do not carry their fair proportion of the cost cannot be summarily dropped. They must be carried at competitive prices in order to keep the stock complete and retain the trade in more profitable lines.

Another serious objection to the attempt to distribute costs more scientifically is the fact that in many, probably most, stores the cost of the bookkeeping required would be a serious drain on the business.

These arguments do not necessarily damn the system, but they are the weaknesses which are found by intelligent merchants who have given the subject some thought and who have tried to apply it to their own business. There can be no disputing the soundness of the basic idea, and if it does nothing else a careful study of the idea and an attempt to apply it to a business is liable to show up some of the weak spots in the business, even if it also shows that the system cannot be used permanently to advantage.

Charles Coster, secretary and chief accountant of T. McAvity & Sons, Ltd., one of the leading wholesale and retail hardware concerns in St. John, read the recent article in Hardware and Metal on the problem of cost distribution with especial interest as he had given considerable time to the working out of the problem in their own business. In a discussion of the problem with a representative of Hardware and Metal he said: "Our system of cost distribution is roughly according to the average cost as found by an analysis of the year's business. Even this cannot be maintained rigidly, however. On some lines we cannot add sufficient to cover the real cost of handling and a reasonable profit. On staple lines the price is low, and is fixed by competition. We must sell these lines at the same price as others or lose more profitable business in other lines. A more careful study of cost distribution by the trade generally might lead to a reform in this, as it might lead to a more equitable adjustment of selling prices in the lines where this fault lies. Until these conditions change, we will have to be content with smaller percentages of profit on some lines and depend on larger profits on other lines to enable us to come out square.

"As a matter of fact, however, the business conditions which produce different ratios of profit on different goods follow, in a general way, the theory of cost distribution. For instance, on staple goods, which do not carry the average percentage of cost and profit, we save on display and floor space, while the extra margin on fancy goods is partly absorbed by the added cost of show cases, window display, advertising, etc.

"We are firm believers in the policy of securing exact and definite information about every feature of the business, and in the past we have experimented with systems for the purpose of keeping track of the cost of handling each class of goods. To do so, it is, of course, necessary to carefully classify the records of sales as well as the records of costs. If our stock did not contain so many lines or if the volume of business in each department was big enough to justify their being separate, this might have worked out satisfactorily, but we found that the cost of the extra labor involved directly, to say nothing of the added trouble and inconvenience, did not compensate for the results secured sufficiently to warrant us in continuing the system. The experiment was of value to us, however, as it helped to demonstrate that the system on which we were working was very close to what it should be.

"A scientific cost system is much more easily adaptable to a manufacturing business than to retail merchandising. In our brass foundry the records of cost on the output are almost definitely exact, and in our iron foundry absolutely so.

"As it is, the best we can do in the retail stores is to watch each item of cost as carefully as possible, and to study each problem as it comes up in the light of our general experience. Our cost and expense account is carefully analyzed and compared with the volume of business. If any item appears too large, it is studied with a view to finding a remedy and in this way we manage to keep our cost of operating at as low a figure as possible commensurate with good service."

C. Edgar, has been making collections in Western provinces for some of our trade and technical papers and magazines, but has not made any remittance to us.

Subscribers are requested not to make any payment to him, and if he makes any attempt to make collections, we would appreciate it if subscribers would promptly telegraph us at our expense so that we can get in touch with him at once.

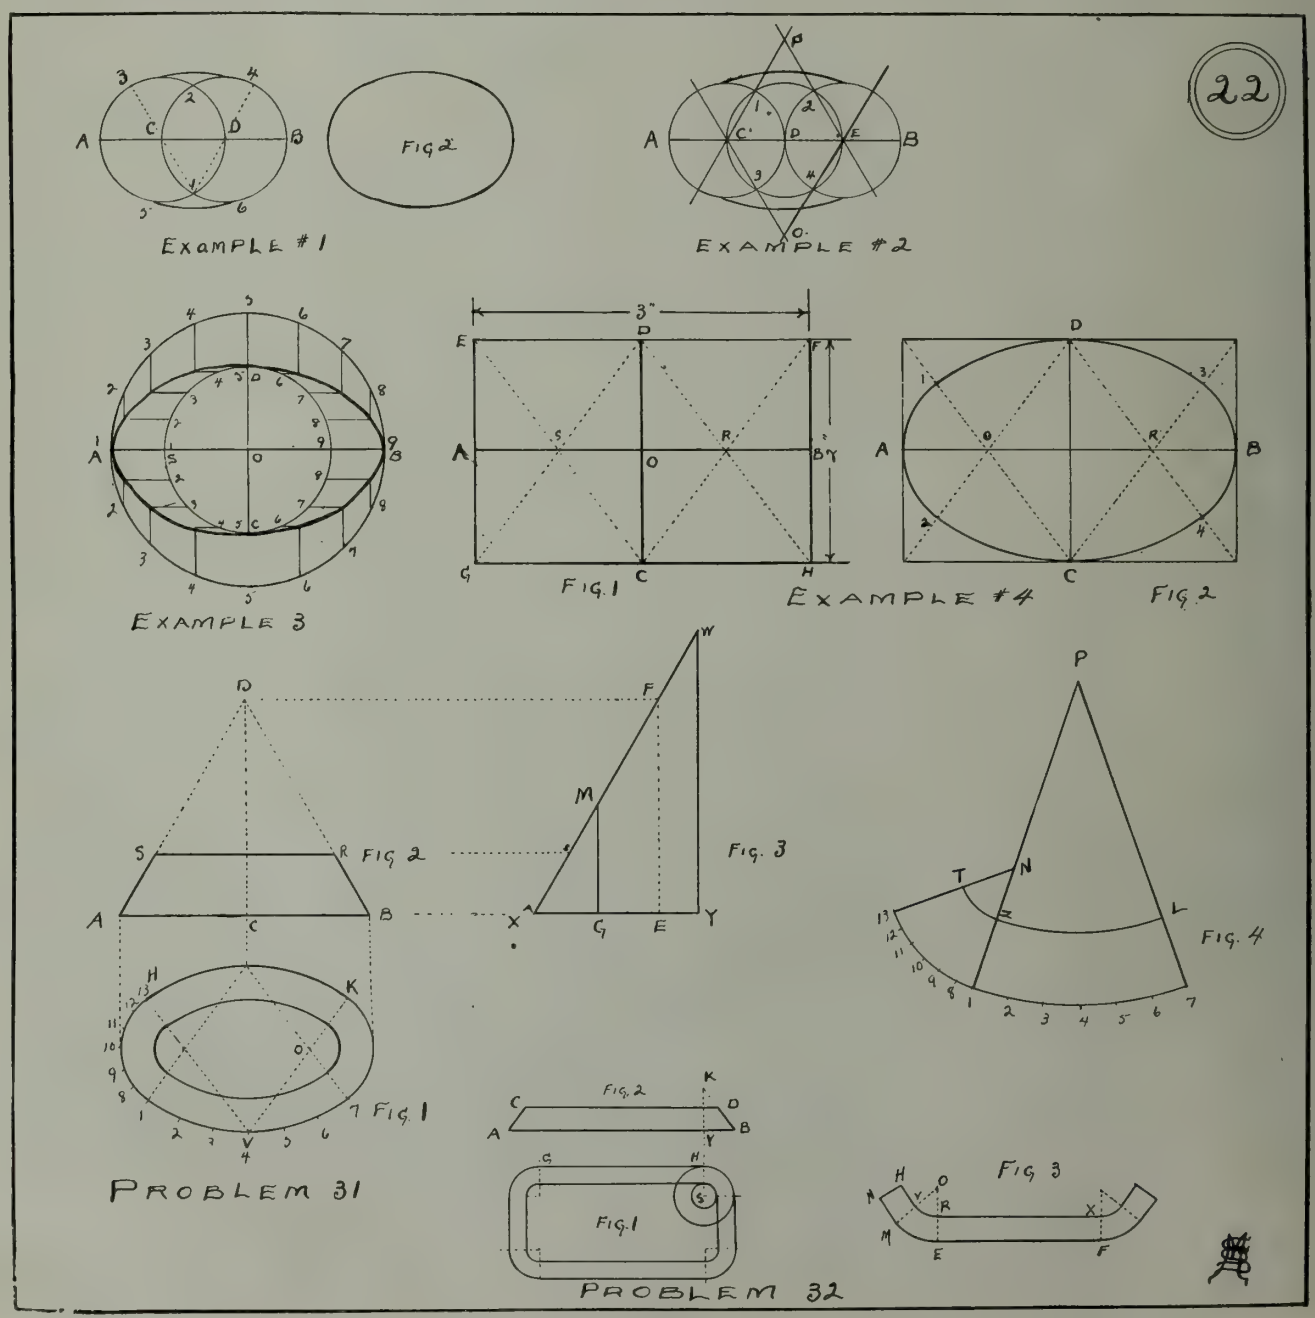
Complete Course of Sheet Metal Work

By L. W. KOSER

Plate 22 shows different methods of getting an ellipse. How to develop the pattern for elliptical shaped articles, also oblong articles with regular flaring sides and rounded corners.

In examples No. 1, the ellipse is formed by drawing two circles and connecting their outer edges by arcs, the radius of which is equal to the distance from intersection of the circles to the opposite edge of the circle.



To explain, suppose we want to draw an ellipse as shown by example 1.

We first draw a straight line as A-B, the length of the desired ellipse. We then divide it off into three equal spaces and mark the two centre spaces C and D. Then with C as a centre and A-C as radius, we describe the first circle, then with D as centre and the same radius we describe the second circle.

Where the circles intersect as at 1 and 2, we draw light lines through the points C and D, and on through to the outside edges as shown by 3 and 4.

Then with 1 as centre and 1-3 as radius we describe the arc 3-4. In like manner with 2 as centre and the same radius we describe the arc 5-6, thus completing the ellipse. The finished ellipse with the construction lines rubbed out is shown at Fig. 2.

Example No. 2 shows another method of getting an ellipse by equal size circles. First draw the line A-B the desired length. Then divide it off into four equal spaces, and mark the centres as C-D-E. Then with C as centre and C-A radius we draw the first circle. Then with D as centre and the same radius we draw the end circle. We then draw lines from C and E where the circles join, through the points 1-2-3 and 4 These lines are extended on one side until they meet the outside edge of the circles and on the other side until they meet at the points O and P. Then P and —are the centres for drawing the large arcs to complete the ellipse.

Current News of Hardware Trade

Fence Co. Growing.

Sarnia, Ont.—A big addition is being built to the plant of the Sarnia Fence Co.

New Powder Company.

Ottawa, Ont.—Letters patent have been issued incorporating the Olympic Powder Co., of Toronto, with a capital of $100.000. The Company will make olympic powder, dynamite and other explosives.

Record Output of Nails.

Sydney, July 14.—The Dominion Iron and Steel Company's new nail mill made a record output on Friday last when over 500 kegs of nails were turned out in twenty-four hours. This is the largest output yet reached since the mill went into operation.

Tin Tub Factory.

Halbrite, Sask.—This place will receive one material blessing this year in the shape of a tin tub factory. The Council authorized the issue of debentures of $3,000 and expect to have a start made in the near future to make Halbrite a manufacturing metropolis.

Death of C. Macpherson.

Prescott, Ont.—The death occurred last week of C. Macpherson, father of W. F. Macpherson, second vice-president of the Ontario Retail Hardware and Store Dealers Association. The deceased was well known to the hardware trade, having been for some years in the store with his son. His death has created widespread regret.

Death of Miss McClung.

Trenton, Ont.—The death took place here of Miss Margaret McClung on July 9. Miss McClung was the eldest daughter of S. B. McClung, and had been ill for several years a bookkeeper in the hardware store of S. B. McClung & Co. She was well known in the trade and sincere regret has been felt at her sad demise.

New Stores Opened.

New Westminster, B.C.—Lawson and Co. have opened a store here. They will carry cutlery, knives, razors, silverware, paint, varnish, tools, etc. It is understood that they will carry on a wholesale business as well as retail. They will deal exclusively in British-made goods.

Appointed Representative.

Prescott W. Robinson, 288 St. Paul St., Montreal, has been appointed Canadian representative of the Bridgeport Hardware Manufacturing Company, Bridgeport, Conn. He will call on the jobbing trade throughout the Dominion. Mr. Robinson also represents a number of other companies in this country, and is a familiar figure in the trade.

Burgess—McFadden.

The marriage was solemnized at Cayuga of Sergt.-Major Hunter E. Burgess of Dauphin. Man., to Miss S. Hortense McFadden. The groom is a member of the traveling staff of the McClary Manufacturing Co., in the territory west of Winnipeg.

Burglars Caught Red-handed.

Brampton, Ont., July 18.—Two would-be burglars were captured in J. A. Henderson's hardware store early this morning. The suspicious actions of one of them were noted by a lady who lives opposite the lane at the rear of Mr. Henderson's store, and she notified the night-watchman. He secured the assistance of several men, and the building was surrounded. When called on to surrender themselves the two men crawled out of the window and submitted to arrest.

To Locate in West.

Foreseeing the opening up of a market in Canada, the Hart Accumulator Company of London, England, will establish a factory in the west, as soon as the authorization of the board of directors can be obtained. E. J. Clark, managing-director of the company, who is one of the party of British manufacturers touring the Dominion, stated that he would recommend to his directors on his return that a plant of large capacity be built either in Winipeg or at Fort William. Mr. Clark explained that the principle material used in the manufacture of storage batteries was lead and lead oxide, the supply being obtained from the British Isles.

Business Changes.

New Westminster, B.C.—H. T. Kick, hardware dealer, has opened a branch store at Edmonds with a complete line of hardware.

Chilliwack, B.C.—The Menzies Hardware Co. have taken over the old established hardware business here of H. H. Gervan. Business in this section is reported to be good.

Vancouver, B.C.—Geo. H. Watts has bought out the Bailey Hardware Co.

New Retail Firms.

Gasby, Alta.—Geo. H. McIntyre has started an implement store here.

Calgary, Alta.—Middleditch & Co., are starting a hardware store here.

Personal Notes.

F. W. Lamplough, Canadian Agent for R. Heinisch's Sons Company, has left Montreal on a business trip to Europe.

D. G. Smith, of the Smith Hardware Company, Montreal, is spending a short holiday in Mount Tremblant.

A. Becker, hardware dealer, Langerburg, Sask., has returned from a trip to Winnipeg.

E. Fielding, commission merchant, Yonge street, Toronto, is on a trip to Europe.

H. A. Sharpe has resigned his position as manager of the Bell and Rochester Hardware Co., Haileybury. He has gone to Ottawa.

PROGRESS OF CREDIT MEN.

Toronto. July 25.—Henry Detchon of Winnipeg, general manager of the Canadian Credit Men's Association at a meeting of the Ontario branch on Tuesday evening outlined progress of the organization since its inception three years ago.

The association now has offices in Winnipeg, Toronto, Calgary and Regina, and branches are about to be opened in Montreal and St. John, N.B. Montreal starts off with a record membership of 104, including several hardware and paint firms.

WAREHOUSE OF REVILLION, LIMITED.

Revillion Wholesale, Limited, of Edmonton, Alta., have had plans prepared for a warehouse, costing $250,000, at Fourth street and Athabasca Avenue, where the corporation have a site of 150 by 135 feet. The structure of steel, concrete, pressed brick and cut stone, will be six storeys in height, plus a full basement, with walls of sufficient width to carry two additional floors. Work will begin as soon as the men and materials can be assembled. Two shifts of men will be engaged to rush the work day and night, the aim being to complete the building early next January.

J. E. Brown, local manager of the company, says the hardware sample rooms will be most modern, being finished in quartered oak with glass show cases and other high-class fixtures. The floors are to be of hardwood. There will be three freight elevators, one of the spiral gravity type for sending heavy ware from the upper floors to the shipping floor and basement.

The firm were recently re-incorporated under the laws of Alberta with a capitalization of $1,000,000.

Weekly Market Report --- Metals

METAL NOTES.

Although no price changes have been made, a number of early advances are predicted.

Soil pipe and fittings are very scarce and advances are believed to be certain. Lead is very scarce also.

Copper has gained strength this week.

MONTREAL.

Montreal, July 25.—Though there have been no price changes locally, the situation is such that these are practically certain to come in several lines. Indeed, all things considered, this seems to be a good time for dealers to cover their future requirements. It is not only that prices will advance, but present shortages make it very evident that the metal houses will later be unable to fill all their orders.

Soil pipe and fittings prehaps are the most certain to advance. This was predicted last week. The lapse of time has only made the advance more certain. It may come in a day or two. On the other hand the higher figure may not be struck for a month, but that it will be struck there seems not the slightest doubt. Exactly what the advance will be cannot be stated with absolute certainty, but it seems likely that the discount on pipe will be changed from 65 to 60 per cent. and on fittings from 70 to 65 per cent.

Buy Soil Pipe Now.

This, however, is not the most serious side of the soil pipe situation. The gravest feature is that early though it is, the stocks are depleted. In view of the fact that dealers experienced great difficulty in getting their supply last year, it would appear that those who do not order in good time will have little chance to get what they need this fall.

Galvanized pipe too is scarce already, and seems likely to become scarcer. Especially is this true of the smaller sizes. It is not certain yet that the prices will be advanced, but this seems likely. Certainly dealers would do well to cover.

Galvanized sheets too are scarce. Especially is this so of corrugated. The demand has been large, and what supply is on hand has been pretty well depleted. New stocks will likely be received, but as the demand continues it is very doubtful if the situation will become easy. With sheets too, this would seem a time to buy—not so much for speculation, although that might bring profits, but to make sure of having the material when it is wanted.

Lead Continues Scarce.

Lead:—Here there have been some fluctuations in prices, but these have not been large enough one way or another to cause a change locally. Stocks are still low, and herein lies the seriousness of the present situation. Manufacturers are being hard put to it to get enough lead to meet their requirements.

Copper:—The price, which fell during the latter part of last week, has risen again, and the metal is still at an exceedingly high figure. There is little likelihood of a change locally—either one way or the other—for some time.

Iron:—Stocks are low. This is one of the causes—perhaps the principal cause—of the present scarcity of soil pipe. The great demand, however, must be remembered when the situation of this product is considered. Manufacturers have turned out much more this year than last, yet their reserve supply is practically nil.

Banca Sale Near.

Tin:—The Banca sale is close at hand now, yet if any effort is being made to force the price down it is not succeeding entirely. The present price is higher than it has been for a week or so. Still the prediction is that a higher level will be seen after the sale has taken place.

Spelter:—Little to say here. Locally stocks are sufficient. The prices have not changed.

TORONTO.

Toronto, July 25.—To quote one man "things are booming" in metals at present time. Demand is heavy but there is one detrimental feature, however—the scarcity of supplies existing in several lines. This is quite pronounced in case of lead and also in tin plates and sheets of all grades.

There have been no price changes but under these conditions market maintains a firm tone, with talk of an upward movement in some lines.

Copper.—Purchasing of copper continues on same liberal scale despite bearish conditions which have been reported from foreign markets. Violent attempts were made to weaken general markets but they have come through the attack in a pretty steady condition.

Tin.—There was a weaker feeling in tin on London market, hinted at as result of skilful manipulation, but situation has since rather steadied. There is a good general demand in evidence.

Lead.—Lead situation has shown no improvement, supplies continuing as scarce as ever, and amount coming forward insufficient to meet present brisk demand. Market appears to be in control of European handlers and they are just feeding out enough to keep market firm. At least this is impression of one local dealer. Dealers do not expect an abatement in demand for some little time.

Plates and Sheets.—There have been no changes in prices. Important feature is scarcity developing in sheets of all grades and which is in fact becoming quite marked and with shipping troubles in England outlook in this direction is not particularly bright.

Spelter.—With high prices ruling on primary markets, there are no indications at least at present of price of spelter showing any wavering. Market remains firm with appreciable demand.

Pig Iron.—Prices are steady to firm with an active business being done.

WINNIPEG.

Winnipeg, July 22.—No amelioration in the condition as regards plate are to be reported, supplies are almost impossible to obtain.

Lead is very firm, and even further advances are not improbable.

Customs figures show that the imports of cement into the Western provinces for the month of June have increased 210 per cent. The figures show that 171,000 barrels have been imported during the month as against 56,000 for the corresponding month last year at 23 cents a barrel, the duty still remaining. In Manitoba the increase has been 17,803 bbs. against 251 in 1911, an increase of 7,000 per cent.

MANY WANT CORRUGATED IRON.

Montreal, July 24.—A heavy demand for corrugated iron is reported here this week, indeed business in this line had grown tremendously of late. The use of this metal for roofs has come into great favor. It is said to be cheaper, more durable and in every way more satisfactory than shingles. Moreover the quality of shingle is deteriorating while the quality of corrugated iron has greatly improved. At present the difficulty is to fill the orders which are being received.

ASK PREFERENTIAL DUTY.

London, July 23.—Hon. George E. Foster yesterday saw a deputation of Welsh tinplate manufacturers regarding the duties. The manufacturers are desiring that Canada put five per cent. on American plates.

Weekly Market Report --- Hardware

ACTIVITY PREVAILS.

The general trend of business is toward greater activity, despite the fact that this is generally considered to be the dull season of the year. Orders are pouring in and some fall booking has been started.

Advances are noted in some lines of builders' hardware, and an increase is predicted in screws.

Optimistic reports are heard from the West.

MONTREAL.

Montreal, July 25.—It does seem that the value of early ordering is being appreciated by a large class of the dealers. This, the season of the supposed summer dullness, is proving not a poor season at all, but a good one; and this is true because the travelers are being able to book orders for goods which will not be needed until fall or winter. Retailers are still selling summer goods, but they are now preparing for the coming demand in other lines. They are not waiting for the demand to come before preparing to meet it. The parable of the foolish virgins is apparently being appreciated in a business sense.

Only a few price changes have been noted recently. There has been a rise in one or two lines of builders hardware, due of course to the advance in metals. An advance in the price of screws is predicted too. These have been selling at a low figure, and it seems that a higher price will be fixed shortly.

Skates Ordered Already.

Seasonable Goods:—These lines—the cherry stoners, meat choppers, the pots and pans necessary for preserving, continue to move well. But a large part of the ordering is for goods which will be wanted in a few months. A demand for lanterns is noted; also for cow ties, and even skates and hockey sticks. Last season was not an exceedingly propitious one for skates, and it seemed that a number of dealers must have had stock left on their hands. Present appearances, however, would indicate that the business in this line will demand new ordering.

Horse blankets are another line for which an early demand is being shown. Dealers are taking no chances of being unable to get these when the proper season comes.

Builders Hardware:—For all styles of builders hardware there is a heavy call. Building is progressing rapidly now. The season when the builders hardware is needed is at hand, and dealers are preparing to meet this demand.

Some Price Changes.

The price changes have been of some importance. Bronzed front door sets for example, have been generally advanced 5 per cent. Almost all inside sets have gone up, some of the cheaper lines more than 5 per cent. These advances were expected some time ago, then it appeared that competition might keep the old figures in force.

It is indicated that wood screws, bright brass and bronze, will be put upon a higher level before long. At present the discount is 85-10-15-2½, but the opinion seems to be that the quotation will shortly be 85 and 10 off the list price. It was a slaughter market, caused by exceptionally low prices quoted by a United States firm, which brought the present low figures. It is said this source of supply has now been removed, and there will likely, therefore, be a revision to the old figures.

Killing and Revolvers.

Sporting Goods:—The demand here is keeping up in gratifying manner. Still fishing goods are being sold, and the approach of the hunting season is causing some to order rifles, shot guns, and ammunition. Recent killings which have taken place in the city are thought likely to hasten the action of those who are anxious to pass laws regulating the sale of revolvers. This may affect ordering in this line.

TORONTO.

Toronto, July 25.—Hardware jobbers report that business has been extremely healthy. "Not only is business up to standard," said one man this week, "but is exceeding it." He considered that improvement was due to general rosy business conditions while late opening of season might explain in part the continued briskness.

"We generally look for a falling off about the middle of July," stated one man, "but so far the usual lull has not made its appearance. However, we can shortly expect the dog days in business to set in."

There are no price changes reported this week in general lines but there is a general tendency toward steadiness evident.

Harvest Tools.—With harvesting now well under way, the big demand at the present time centres around harvesting tools which are moving freely from both wholesaler and retailer, more especially the latter as retailers have by this time pretty well anticipated their wants, although there is always a sorting business to be cared for. There is a good business to be cared for. There is a good business in binder twine and such lines as forks, scythes, rakes, grain cradles, etc. These are the lines the retailer should now push strongly.

Household Goods.—Earlier in the season it was refrigerators and similar lines which held the centre of the stage but the position has now been usurped by preserving necessities, such as kettles, jars, cherry pitters and similar goods.

Seasonable Goods.—The retailer is still finding an appreciable demand for those lines naturally called for during warm weather. Those articles to bar the fly from the house or destroy it after it enters, are selling well.

Builders' Hardware.—Builders' hardware is finding a fair demand from both city and country points. There is considerable building in progress at present time, indicating a demand later on for finishing goods.

Heavy Hardware.—There are no special features. Business is acknowledged as good in all lines.

Sporting Goods.—There continues a good demand for sporting goods. Baseball and lacrosse supplies are naturally less brisk than a while ago but fishing tackle is selling well while there is a demand for motor boat supplies, canoes and associated lines.

WINNIPEG.

Winnipeg, July 22.—The wholesale situation has varied little since last review. A large number of retail merchants from country points are visiting the market on the occasion of the exhibition. It is understood that a large amount of business was transacted not only for goods for immediate delivery, but for next season.

There is perfect confidence now in the crops and the business situation. Harvest will be general on August 15, and Western Canada stands to gather in from 225,000,000 to 250,000,000 million bushels of wheat of above average quality. The only cause for uneasiness is the labor market, which is ill-supplied to meet the great demands that will be put upon it.

Harvesting machinery and repairs are moving freely now. There is no falling off in demand for builders hardware, and there is a good enquiry for fall sporting goods. A heavy trade in ammunition may be expected, as reports of game are satisfactory.

There is a good demand already for binder twine, but the volume of consumption will be less than last year as straw is comparatively short and light as compared with last season's rank growth.

Stoves, Furnaces and Accessories

Make Store Window Displays Practical

Lack of Space Prevents the Trimmer Attempting Anything Elaborate in the Average Store—Efforts Should, Therefore, be Bent Toward Making the Displays Demonstrate Certain Points —Ideas and Suggestions.

Many hardware dealers pay little attention to their store department. This is doubly surprising because no branch of the business is more difficult to handle well.

It calls for a rare degree of skill and a good stock of practical knowledge to sell stoves. No man becomes a good store salesman until he has used his "grey matter" pretty steadily, studying the subject. He has to know human nature as well as his store. It is correspondingly difficult to arrange catchy store window displays. Altogether there is every reason to give much time and study to the subject and it is hard to understand why some dealers give so little of either.

However, the object of this article is not to stir up recalcitrant dealers, but to discuss the question of arranging store windows. Despite the fact that there is a long stretch of summer still ahead, the subject is a timely and pertinent one. Stove displays will soon be in order, and in the meantime every window dresser will be interested in matters relating thereto.

At first glance it does not appear that the window trimmer has much scope when it comes to arranging stove displays. Stoves are bulky, and by the time one has been lugged into the window there isn't much room left for anything else. Where the window is of exceptional size, it is a different matter, of course. But in the average hardware store, the window space is limited, and the trimmer has a somewhat knotty problem when it comes around to stove time.

He is practically compelled in the first place to abandon the idea of making an elaborate display. Space does not permit this. The very best thing he can do, in the opinion of the writer, is to plan a practical display, something which will be demonstrative. Endeavor to make the display demonstrate some of the good features of the stove, or better still, concentrate on one special feature. This will be found more effective than attempting a fancy display.

To illustrate. A certain stove dealer made a unique display by exhibiting a base burner with two hods filled with coal, one on either side. One hod was very much larger than the other, and a card announced that

"This much coal will be burned in the ordinary base burner."

Against the small hod was a card which read as follows:

"This much coal will be all that is necessary if you use our 'name' base burner."

To further attract attention, he scattered a quantity of dollar bills on the floor of the window. A large sign read: "You can pick up money no easier than by buying one of our (name) base burners. They will save you money by the big saving in your coal bills."

The last feature was hardly necessary. In the opinion of the writer, it partook a little of quackery. It smacked of the methods of the mystery fakir who boldly announces that he will give one thousand dollars (or some other impossible sum) to any person who can prove that he is resorting to deception.

The main idea of the display was amply sufficient. There you had it—— a contrast which drove home the lesson. A display along such lines emphasizes the value of buying a stove which will be a light consumer. It is a one-idea display, and as a result the one idea stands out prominently and unmistakeably.

Showing Each Part.

The store is a practical proposition. It is intended to perform a number of very practical functions. People approach the question of buying a stove in an eminently practical frame of mind. Ergo, if the window trimmer wants to attract them, he must make his display practical.

One of the surest methods is to put a stove in the window and expose each part to view. Have the oven door open and the lids lifted. Spectators are thus enabled to get a clear view of the interior of the stove. This method may perhaps detract from the appearance of the window (judging from an artistic standpoint), but it makes a good practical display. If cards are shown, explaining briefly some important features of the stove, you have a display which will win the serious attention of every man and woman contemplating the purchase of a stove.

A somewhat hackeneyed method is to suspend a number of signs around the stove, invisible wires attaching them to the ceiling. Strings are then strung from the signs to the parts which they refer to. The effect is a good one, although the idea has been worked by a great many hardwaremen, it is still well worth trying.

Have a Background.

A feature which is commonly neglected is the background. Many window trimmers apparently think that as the stove occupies so much space, it is not necessary to bother with the background. This is a mistake. Any article will show up better when a proper background is provided and, in the case of stoves, it pays the trimmer to provide one. Best results are obtained when a plain background of one color is arranged. The stove stands out, and the outline is plainly describable from the other side of the street.

Moving Devices.

A motion device is just as certain to attract attention as a side show "spieler." People will gather in front of the window to inspect the device. The majority of them will probably not be interested in stoves, but some will. In cases where the trimmer is showing an article which he wants people to study —as in the case of stoves—the motion device, is both an advantage and a disadvantage. There will be a crowd around the window continuousuly, and every person who passes will be attracted by the crowd and stop. Thus no stove prospect will pass the store without seeing the display. On the other hand, the presence of the crowd will make it difficult for anyone to study the display as closely as they should. On the whole, perhaps, the advantage outweighs the disadvantage.

JAMES STEWART PICNIC.

Woodstock, Ont.—On Saturday, July 20, the fifth annual picnic of the employees of the James Stewart Manufacturing Company was held at Fairmount Park. There was a very large attendance, and it was universally voted to have been the most successful picnic yet held.

The day was cloudy and cool, but this added to the enjoyment, and the programme was carried out expeditiously. It included a number of unique events. A vote was taken to determine the most popular lady on the grounds, and the honor fell to Miss V. Kelley. A second

vote was taken to get a consensus of opinion as to the most handsome gentleman, and Geo. Childs, Sr., was the proud recipient of the most votes. A baby show was next in order, little Miss Helen Dickson being judged the winner.

The big event, however, was the baseball game between the married and single men. After a hard struggle. the bachelors won out by a score of 5 to 4. A number of races were run off, including a number for the juveniles.

Weekly Market Reports---Stoves

A RECORD YEAR.

Indications all point that way. It is becoming more apparent all the time that the fall demand is going to be exceptionally heavy.

Fall shipments have begun. The manufacturers are anxious to ship out as much now, and thus avoid congestion in the fall.

MONTREAL.

Montreal, July 18.—While there has not been a price change noted here during the week, the market is far from uninteresting. During the last few days there has been a great revival in this line of business. Orders are coming in largely, and the manufacturers are now busy figuring if they will have a sufficient supply of stoves to meet the demand. They are also figuring out the shipping problem which caused such a lot of trouble last fall.

This shipping problem is a serious one--and one which the retailer might well consider as well as the manufacturer. The difficulty which has been experienced in the past has meant slow shipments. If there is a shortage of drays and cars again, as seems quite likely, it will mean slow shipping once more. Those who send their orders at the last moment, therefore, will be in great danger of having to wait. A wait may lose a sale, and is therefore something to be avoided, and the way to avoid it is undoubtedly to order early.

Prepare For the Rush.

Mails being received daily indicate that many of the dealers are awake to the need of early ordering. They are sending word of their early requirements. Some are having these shipped at once. Others are merely getting their orders on file, having these call for shipment at a later date. They are thus safeguarding themselves, for, in a rush time, orders are of course sent out as they have been received.

At present the demand is for kitchen ware especially, but stoves and refrigerators are also moving.

Kitchen Ware:—The preserving season is keeping up the demand for this line. Kettles and sauce pans are moving regularly. These are now moving at the old price, but copper goods seem to face another rise and it is impossible to say when this will come.

Many Stocking Stoves.

Stoves:—As has been indicated the ordering is largely for the future. Many dealers, however, are getting in a good supply already. If they have room these would seem to be the wise ones, for people seeing a good display of ranges will be likely to bear the dealer who has these in mind, and will go to him when there is a purchase to be made.

Refrigerators have moved better this month than was expected. The late arrival of the hot weather stopped some early sales, and the excessive heat, when real summer really came, made people banish all thoughts of doing without a refrigerator. Even yet the demand does not seem quite over.

Furnaces:—A demand for these has sprung up early—largely because a number of buildings are already nearing completion, and are being installed with heating equipment. Radiators too are commencing to move, for much the same reason as the furnaces.

TORONTO.

Toronto, July 25.—The outlook is improving all the time. Manufacturers are pretty well agreed that the fall trade will be far ahead of last year. When it is recollected that 1911 was the best stove year in the history of the country, it will be seen that expectations at the present time are of a very high order. Fall shipments have begun. Although as a general rule the dealer does not want shipments before the middle of August, enough have specified early delivery to make the outgoing movement pronounced. The manufacturers are sending out just as many orders as they can conveniently fill. In few cases are the orders filled completely.

The shipping is being done on the whole a little earlier than usual. This is indeed satisfactory as the manufacturers are anxious to avoid congestion as far as possible. Only by getting out a lot of orders now can congestion be avoided.

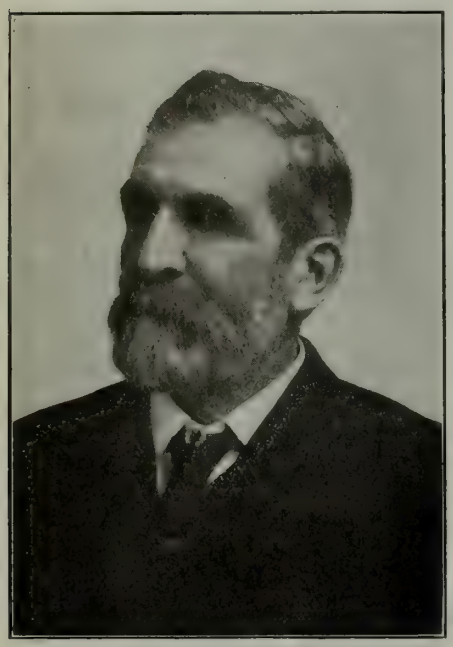
Gas Stoves.—The cooler weather has brought about a partial resumption of activity in the gas stove trade. The best of the trade has been done, however, and only sorting orders are being filled now. In fact, most of the stoves shipped out were to supply dealers who had already sold them. It has been a splendid gas stove year.

Oil Stoves.—Demand has been revived considerably. This is probably due to the fact that campers and summer cottagers have been feeling the need of something to heat up their quarters in the evenings. There has been a pretty general call for oil stoves from all sections.

Coal Ranges. — Fall shipments in ranges are fairly heavy. Booking is proceeding rapidly and it is becoming apparent that the fall trade is going to be extremely heavy. The western demand has been particularly heavy for ranges and big shipments are being sent beyond the Great Lakes. Northern Ontario is also showing a steady demand.

Furnaces.—The rapid advance of the building season is bringing about a corresponding advance in the call for furnaces. A Toronto furnaceman stated today that he saw more contracts ahead than in any previous season. "I'll soon be rushing you for shipments," he told a manufacturer. "You won't be able to keep me going this fall." It certainly begins to look as though the demand would keep the manufacturers "hustling."

Accessories.—There is a big demand for stove pipe, plates and other stove accessories.



WINNIPEG.

Winnipeg, July 22.—There is nothing new to report in the heating and cooking apparatus lines. There is a fair business doing and no more need be expected till the advent of cold weather stirs up the community to the fact that heating apparatus is a prime necessity.

Installation of heating plants for larger buildings is much in evidence, and there is much to do in this line.

FIFTY YEARS IN BUSINESS.

Kingston, July 24.—Congratulations are being extended to the two veteran hadwaremen of Kingston, Messrs. John M. McKelvey and Samuel Birch, of the firm of McKelvey & Birch. They have just celebrated their 50th year in business. In referring to the veteran hardware men, the British Whig had this reference: "Messrs. McKelvey & Birch

John McKelvey.

are numbered amongst Kingston's substantial citizens. Their business career has been a striking example of what may

Samuel Birch.

be attained by progressive enterprising men whose energy equals their ambition."

McKelvey & Birch have purchased the George property on Gore Street, and will use it as a store house. They have been forced to give up the old quarters on Johnson Street to allow the convent school to be built on that property.

Editor's Note.—Sketches of the careers of both members of the firm have appeared in recent issues of Hardware and Metal. They are undoubtedly among the most widely known men in the hardware trade in Canada.

Picnic of the B.C. Hardware Dealers

A Splendid Time Spent on the Ranch of Fred Cunningham—Baseball and Boxing Prove Features of the Day's Sport—About Thirty Were in Attendance.

Vancouver, July 18.—Members of the B.C. Hardware Dealers' Association held their annual picnic, and from all reports they had the time of their lives. Many impromptu and novel features were introduced, with the result that everyone enjoyed themselves.

There were about thirty in the party that went to Fred Cunningham's ranch on the north arm of the inlet, the mode of transportation being by three launches, owned by G. Parsons, Jack Paine and Fred Cunningham. After the first getaway, the crowd went to Belcarra and played a baseball game. This was only a preliminary, and after the return to the ranch (according to Mr. Cunningham this is pronounced rawnch) the party retired to the basement. Retire is used advisedly, for the boxing gloves were put on, and with thirty present, everyone taking part, there were fifteen goes of three rounds each. As said before, the party retired to the basement, and later some were retired in the basement. Anyway, those who survived the bloody noses and bruised cheeks, declared it the most laughable time they ever had.

To quote an apt phrase this was the piece de resistance of the afternoon, though many of the agressive hardwaremen did anything but put up an effective resistance.

Supper was served on the verandah of the summer cottage, and the tables were very tastefully arranged. The situation was magnificent. The water was close by with its wooded islands, while all around on either side of the inlet towered the mountains vast, where the play of color in the evening sun was something beyond description.

The beauty of the scenery, however, was forgotten in the beauty of phraseology of the effusive hardwaremen. Everyone was required to say something, and all were kept occupied either in talking or trying to get some of the bashful ones to utter some joyous phrase.

The home run down the inlet, between the banks of electric lights, in Vancouver on one side and North Vancouver on the other, was made about midnight.

STIMULATING TRADE IN MID-SUMMER SEASON.

(Concluded from page 34)

of whom featured the joys of camping in clearing their stock of tents. They also advertised campers' cots, flies, poles, etc., along with the tents. As tenting along the rivers and lakes of New Brunswick is decidedly popular, the returns from the scheme were encouraging. T. McAvity & Sons also featured lawn mowers for a few days now and again, emphasizing the fact that "a well kept lawn is a thing of beauty, and it cannot be made perfect with a poor mower—ours is strong, durable, and light running, designed to lead anything on the market."

Colwell & Jennings of Fredericton, are boosting a clearance of their lines of kitchen hardware, granite, enamel, pots and pans, and other bargains calculated to excite interest on the part of the housewife, and cause her to think of replenishing her pantry and kitchen supplies and fixtures.

Benefited From Fly Campaign.

W. H. Thorne & Co., St. John, and R. Chestnut & Sons, Fredericton, struck similar ideas, and, taking advantage of the active campaign being waged by the press and health protective bodies, increased their receipts from the sale of various lines of insect powders, bug death, fly killers, etc. The former concern not only spoke of the need of protection in the home from the house-fly, but also of the need of caring for live stock, horses, and cattles and preventing their being pestered with lice and flies during the hot season, emphasizing the fact that "in fly time it is positively necessary to use some preparation for the protection of animals for flies and this fly-killer is most satisfactory."

From what has been written it will readily be seen that there is a wide range of ideas regarding the featuring of seasonable goods during the summer months but, that extra efforts must be made to keep trade in the right channels, is easily recognized. As one dealer in speaking of the matter said this week, "when the trade is not coming our way, we've got to turn the tide as it were and make it come, and our endeavors to do this thus far have been quite promising."

Methods of Retailing Paints and Varnishes

A Traveler in the Retailer's Place

One Explains What He Would Do to Secure a Good Paint Business if He Had a Store of His Own, in a Place Where There Was a Good Farm Trade — He Would go in for Outside Salesmanship, He Declares.

"What would you do if you were selling paint as a retailer sells it?" was asked of an experienced traveler for a well-known paint house.

"Well, now," replied the traveler, "you have asked me a hard one. I'm so accustomed to sell to the dealer and not for him, that I am in a little the position of a novice. However, I have watched the methods of others. I have seen some real retail paint salesman, and I have seen some of the other kind — those who believe that salesmanship consists in handing out a can when it is asked for. I've been interested in this retail way of selling, for I have held that it is part of a traveler's work to help the retailer sell his goods. I wish I had a chance to sell retail."

After the Farmers.

"Well," was asked again, "if you had the chance what would you do?"

The traveler scratched his head for a moment, and then gave his ideas about as follows:

"You know it is impossible to say all I would do right at once, but one or two things are certain. One is that I would make a dead set for the farmers, and another is that I would start making that dead set in time. I would make him know there is such a thing as rural mail delivery. I would send him some of the picture work that the manufacturing houses send out. That would be looked at carefully, and the letter accompanying it would be read too. I know the farmers, and they don't throw any letters away unread. A farmer is just naturally curious to see what is inside every envelope, and what is said in the next paragraph.

"I think I would go after the farmer to paint his barn, and I would prepare for the campaign now. The actual work I would not begin much before September but the plans would have to be under way well before that time.

Would Limit Campaign.

"What would my plans be? That's what I'm trying to tell you, though I'll admit I haven't them well defined.

"We'll take it for granted though that I know a good many farmers through the country. You can bet I would if I had been carrying on a hardware business there for even six months or a year. Well I would know a good many intimate facts about some of these farmers. For instance I would know in a general way the amount of money these men were worth. I would pick out the ones with money to be the recipients of my attention. There is no use trying to get a man without money to buy. It is like trying to get a one-legged man to jump.

"I wouldn't go after all the men with money either—at least only in a general way. I believe better results could be secured from specializing. Some men who have money in luscious rolls are harder to convince that they should spend some, than are others with only a moderate amount. The very "close" I would leave for a time. They could come later. For the time I would pick the well to do, and the fairly ready spenders, whom I knew should use some paint. If I didn't know which of these had barns in need of painting I would make inquiries and take drives to see.

What to Say in a Letter.

"Then I think I would draw up some letters. As I figure it there is no use telling a man he should buy some paint; that this would preserve his wood and would cost him little. That's too general for any man, and especially for the farmer. The farmer wants to be shown. All farmers seem to have come from Missouri. That old idea of the boys doing up Reuben when he came to town is all wrong now. It is the other way around.

"I would, both by letter and by personal canvass, tell the farmer that he might well paint his barn. That this would preserve the structure and would cost little. But I would say more. I would point out just what the cost of painting the barn would be. I would find the size of his barn and explaining that one gallon would cover so many square feet, I would show how many gallons would be needed, and therefore what the expense of material would be. I would also point out that the work upon the barn could be done by the

A display of paint arranged by Ray Best of Campbell & Best, Peterboro.

farmer himself, which would not mean any real loss of time, since the quiet season on the farm had come.

A Near Home Example.

"If I did not know the exact size of the barn—this in the case of a letter, where the information could not be asked—I would approximate; explaining the square feet a gallon would cover; quoting the price of this; and estimating from this what the cost of the whole work would be.

"Then I would say something about protection. I would send out some of the information the manufacturers publish; and better still I would—if possible—cite one specific instance. If I could tell Bill Jones, that Silas Smith had painted his barn six years ago, and that it was as good as ever still, this would bring home to Bill Jones the value of painting his barn in which cracks were beginning to appear. Of course the information would have to be absolutely correct, for the barn used as an example would be known to the receiver of your letter.

This is where it is of real benefit to keep a list of those to whom you sell paint. I know a farmer near Sherbrooke, Quebec, who painted his barn with our paint three years ago. He watches that like a cat, to see if it does give the protection that we said it would. Now he has begun to agree that it does, and he is quite ready to express his opinion. The faith which has grown in him has meant many sales for the local dealer in handling our line.

Probably there is nothing so forceful to a farmer as to mention that a neighbor has benefited by painting, as you are urging him to paint. In a city that might not work so well, for in many cases people don't know their immediate neighbors well. But it is of great value among farmers. It leads to their talking over this question of painting, and that leads to more people being interested in your campaign. Why a few letters of the right sort would stir up real interest.

"Of course I would dress a window with paint too, and I would keep paint well displayed inside the store. But, especially I would go out after the business. It is an age of outside salesmanship, and the retailer might as well adopt those methods too. I know a number of the most successful who are doing this."

Master Painters in Annual Convention

Big Gathering at Gananoque Featured by Addresses of a Practical Nature on Paints and Specialties—Social Events Were Unusually Pleasurable—Paint Displays in Local Hardware Store.

Gananoque, Ontario.—The ninth annual convention of the Master House Painters and Decorators Association of Canada was held here from July 16 to 19. The sessions, which were held at the Gananoque Canoe and Motor Boat club house, were very well attended. It was found that no better place could be selected for the holding of conventions than here in the very heart of the Thousand Islands. The pleasant surroundings added to the interest of the event. In addition, there was every facility for pleasure jaunts, and the social side of the convention was carried out as never before.

Firms Represented.

A feature of the convention was the large number of manufacturing and jobbing companies represented. Included in the list were the following: Brandram-Henderson, Ltd.; International Varnish Co.; Consolidated Plate Glass Co.; Sanderson Pearcy Co.; Canada Paint Co.; Stauntons Ltd.; Stewart & Wood Co.; A. Ramsay & Son Co.; Imperial Varnish Co.; Boeckle Bros. Co.; Berry Bros. Co.; The Toronto Plate Glass Importing Co.; James Langmuir Co.; Benjamin Moore & Co.; A. Muirhead Co.; Sherwin-Williams Co., of Canada; Pinchin-Johnson Co.; Glidden Varnish Co.

The Opening Session.

The first session was held on Tuesday at 10 a.m. with president Wm. Barrett, of Hamilton, in the chair. Mayor Donevan, of Gananoque, gave an address of welcome, after which the business of the convention was taken up. The reading of the president's address was first in order, followed by the appointment of committees on credentials, resolutions, auditing and the president's address. The reports of the other officers and the standing committees followed.

Addresses Given.

An address by James Kitchener, of Toronto, was given on "the best finish for exterior hardwood and hardwood floors." Some practical pointers were given.

Mr. Clucas, of the Canada Paint Co., followed with a valuable paper on "paste dryers vs. liquid dryers," in which he discussed the relative merits fully and comprehensively.

Mr. Faircloth, of Toronto, gave a paper on "the best method of covering plastered surfaces with lining papers or cotton and their subsequent treatment."

An illustrated lecture on paint analysis was given by Professor Gardner of the Institute of Industrial Research. Professor Gardner has attended other conventions, and his lectures have become a feature to which all look forward.

"Lithophone and its use in the paint and kalsomine trade" was the subject of an address by Fred. Moore, of Benjamin Moore & Co., Toronto. Lithophone is a comparatively new preparation, and is used to replace white lead. Mr. Moore's address was followed closely, and a discussion ensued on the qualities and possibilities of the substance.

W. A. Poole, of Brandram-Henderson Limited, gave an interesting demonstration of lead corroding by the old Dutch process, showing by means of miniature apparatus exactly how the corroding is carried out. The demonstration was followed with close attention.

Addresses were also given by Wm. Wall, of Somerville, Mass., and John Dewar, of Pittsburg.

A new feature of the convention was a question box session when a number of live topics were introduced and discussed.

The entertainment features were many and varied. On Tuesday a baseball game was played between the master painters and the associate members (i.e., the travelers), and a reception and musical was given at the Canoe Club pavilion. On Wednesday a trip was taken on the "Thousand Islands," leaving at 3.15. Dinner was served at the Thousand Island Hotel, Alexander Bay, at 5.30 p.m. The return was made about 9 o'clock. This trip was provided by the associate members.

On Thursday, a programme of sports was run off, in which the indefatigable travelers took a prominent and useful part. A baseball game was played and many races were run off.

In the evening a moonlight excursion through the Thousand Islands was the order. Special steamers had been secured.

On Friday, fishing trips were held, many of the members displaying great prowess with rod and tackle.

Window Displays.

An interesting feature was the displays made in the store windows of Bennett & Son, local hardware dealers. Two front windows were used, one for a display of paints and the other for a brush display. Both trims were eminently creditable, and the delegates displayed considerable interest in them.

AN ORIGINAL DISPLAY.

On the previous page, a display is shown which appeared in the window of Campbell and Best, Peterboro. Ray Best who arranged the window has a well deserved reputation as a window trimmer, and his success in this instance is noteworthy.

Fall in Step With Our Maple Leaf Fall Painting Campaign!!

We want dealers to help us, and in turn help our M-L Dealers, to do Fall Painting Business. It helps trade. It helps the paint. Whatever helps the paint, helps the dealer's own business. Satisfactory paint results in bigger sales for the paint departments of local retailers. Fall painting is best.

How This Campaign Will Help Our Dealers—

By our newspaper advertising campaign to consumers, all inquiries are directed to local dealers who carry Maple Leaf Paints, M-L Floglaze and M-L Elastilite Varnish or M-L Flat Wall Color. The retailer does every cent of retail business. We help him sell. See that your stocks are full this Fall with our Maple Leaf Line.

OUR LINE Consists of **M-L Ready-Mixed Paints**, ready for the local painter to use. In addition, **M-L Floglaze** can be used outdoors and in, not merely on floors and wainscotings, but on garden furniture, tools, implements, buggies, autos, wagons, etc. Besides these, **M-L Flat Wall Colors** decorate interior plaster most beautifully—a field almost impossible for the dealer heretofore? Lastly, **M-L Elastilite** is a perfect easy-to-use varnish for indoors or out, except floors. Carry these profit-bearing lines, advertised by us, and ready to sell direct to the local user.

True paint economy isn't how little you spend—
it's how much value you get for what you spend.

The Acid Test of Paint is Service

"What's in a paint?" is of subordinate importance to "What will it do?"

The essential thing to know about paint is what results will it give?—not so much how quality is arrived at—but is it there?—

—uniform covering power, spreading capacity, beauty, wearing quality.

Those are the vital points for the hardware man to consider when choosing paint—because they add to value in satisfaction and economy to the consumer.

Therefore, as paint is made to use, that paint which renders the most efficient service is the best paint.

Any way you figure it, Lowe Brothers' "High Standard" Liquid Paint is always better—all ways best.

There is no argument, we admit it.

Weekly Market Report --- Paints

BUSINESS CONTINUES BIG

It is reported from all sections that manufacturers of paint are extremely busy, despite the fact that the mid-summer season is generally accounted dull.

Gasoline and benzine have gone up in price.

White lead is very scarce, particularly in Toronto, where a famine has developed.

MONTREAL.

Montreal, July 25.—This is the time of year when the manufacturers usually are easing off—when orders have been filled, and when only supplementary orders are demanding immediate atention. It is a different state of affairs which the paint men face now. On all hands it is reported that they are away behind. "It has been simply impossible to give prompt delivery," stated one Manager. "We can not turn out the paint fast enough, and our reserve was eaten up long ago. We are sending along enough to each customer to keep him going, but that is the best we have been able to do. I hope that by the end of next month we will be straightened away, but if orders continue to come in as they have been doing lately even this will be impossible."

No Going Up in Price.

Aside from the heavy demand there are no features of great interest this week—no price changes, and no promise of immediate price changes. Linseed, while scarce, still continues reasonably low. All the other materials are steady. Even glass, though it promised to cause some excitement later on, is quiet for the time.

Linseed Oil:—Some news is coming through with reference to the Canadian crop. A larger acreage is being used this year for flax than last year, and from present appearances the crop will be fully as good—probably somewhat better. Last season was ideal up to a certain point, then the cold wet weather spoiled the crops somewhat. If no such untoward setback is experienced this year a fine Canadian crop may be expected—though of course even the size of the crop does not altogether indicate its oil giving properties.

Shipment to States.

It is worth noting that a 60,000 bushel cargo of Canadian flax has just been shipped to Duluth. This is but one of several such cargoes which have been sent over there.

Prices here remain at .97 and $1.00, with paint manufacturers very loath to sell.

White Lead:—The pig is still scarce, and the manufacturers are having rather a hard time to get all the raw material they require. No further talk of price changes have taken place. This does not mean, however, that another advance will not come. If the pig does not become more plentiful a further advance is quite likely. However, this is the holiday season, and nothing is being done for the time. It is hardly likely any change in price will occur within a month.

Paris Green:—The demand for this continues large though hardly as large as it was a week or two ago. Still there is difficulty in shipping the product in the shape that many are ordering it. The bulk Paris green is fairly plentiful, however, and dealers have been supplied with this.

Mixed Paints:—Barn paints are coming to the fore now. That is the dealers are ordering these as well as sending sorting orders for interior and exterior house paints. The harvest once in the farmers will have time for painting. The dealers are preparing for this call well in advance.

Glass:—Nothing definite can be said about the future of this material. It depends largely upon the situation in Belgium, and while little is appearing about this in the daily papers, it is learned that the country is not at rest. If trouble comes, up goes the price of glass.

TORONTO.

Toronto, July 25.—While at this time of year a let-up in business is the general rule, dealers still continue to give out rosy reports regarding trade. "Much busier than usual at this time," is a sample of the reports this week.

A further upward movement in price of gasoline is among the market changes this week. Another outstanding feature is marked scarcity of white lead, temporarily amounting almost to a faminine. Recent reports regarding glass are by no means encouraging.

White Lead Famine.

White Lead.—A temporary famine or next thing to it exists in white lead on this market. Demand is particularly strong and dealers are far from able to fill orders. One house reported they are at moment 120 tons behind in orders while another dealer says: "We could use 125 tons easily right away but have only a couple of tons on hand." There is hope of some relief to acute situation in week or so, that is as far as supplies are concerned, but it will be none too soon.

Linseed Oil.—There has been no further change since last week's big reduction, prices ruling at $1 and $1.03. Absence of consumptive demand and liberal shipments from India combined to depress English market considerably. When weakness set in, holders got scared and began to unload. Certain of local trade are inclined to believe that prices have been lowered more than market warrants.

Turpentine.—Fair demand is reported in turpentine with price unchanged at 67 cents.

Glass.—The probability of social disturbances in Belgium is looming up large in glass situation as that country is chief source of our supply. Predictions of strength in this market are not lacking. If an upheaval in Belgium should occurr it is certain to have no little effect on the Canadian glass market.

Prepared Paints.—July is not generally regarded as a busy month in paints but demand is very satisfactory for season.

Gasoline Higher.

Gasoline.—Another addition has been made to the price of gasoline making a total advance of 5½ cents per gallon since last winter. Gradually little by little, prices have been climbing upward until motor gasoline in barrels has now reached 22 cents per gallon. Tremendous demand for this article is offered as one reason for advance while it is also put forward that price has been too low for some time as price of crude petroleum has been steadily advancing while gasoline has not been keeping pace.

Benzine has also been moving upward in past six months, on one occasion a jump of 2 cents being registered. It is quoted at 20½ cents in barrels.

WINNIPEG.

Winnipeg, July 22.—There is a good sorting demand for paints and oils and everything points to a continuation of the present business activity.

As regards prices in accord with the strength of the lead market, both white lead and red lead have advanced in price. Orders for window glass are coming in in good volume, and business in these lines will doubtless greatly increase during the next month or three weeks.

Linseed oil and turpentine continue steady. Flax is reported as a good average crop, and with a steadily declining price a reduction in the manufactured article is not improbable.

CURRENT MARKET QUOTATIONS

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

The fullest measure of profit in your paint department can only accrue from a clean-cut quality stock, backed by forceful, attractive selling help on the part of the manufacturers.

Minerva Paints and Paint Specialties

The Famous British Brand

are goods of known quality and established reputation.

They will surely lead the way to bigger business and better profit for every aggressive retailer.

Ask any MINERVA Agent. He will gladly tell you what the MINERVA line has meant to him.

Put up in cans containing Full Imperial Measure.

PINCHIN, JOHNSON & CO.
(CANADA), LIMITED.

377-387 Carlaw Ave., TORONTO **128 Princess St., WINNIPEG**

Established in England in 1834.

The Saskatoon Hardware Co., Ltd., Saskatoon. Distributors for Northern Saskatchewan.

The Western Supply & Equipment Co., Limited, Calgary. Distributors for Southern Alberta.

The Western Supply & Equipment Co., Limited, Edmonton. Distributors for Northern Alberta.

Wm. N. O'Neil Co., Ltd., Vancouver. Distributors for British Columbia.

(M-92)

Steel Tanks and Self-Measuring Pumps for Paint Oils

They avoid all the loss and inconvenience sustained under the old method. The steel tanks are air-tight and will not permit the oil to gum or stick. The pumps measure the oil according to the Imperial Standard, directly into the customer's can. They count the gallons pumped and compute the charge for fractional gallons.

THE BOWSER PAINT OIL SYSTEM

will put every cent of profit into your pocket, where it belongs. With a Bowser your paint oil department will be as clean and inviting as your shelf hardware department. It draws trade.

Why not investigate now and increase your paint oil profits. Your fellow merchants are using them. They'll help you. Ask for book No. 15.

S. F. BOWSER & COMPANY, INC., TORONTO

Paris Green—21½ cents per 112-lb.

Something Good for Your Customers

The modern finish for hardwood floors is wax. But waxing a floor with the old-fashioned paste beeswax preparation is a tiresome job at best.

Give your customers

JAMIESON'S LIQUID FLOOR WAX

Its convenience appeals to everyone.

Made from Hard Vegetable Wax, applied with an ordinary brush, and then polished when dry, it produces a finish that in appearance and durability can not be approached by any beeswax preparation.

Your customers would appreciate it.

MURESCO

30,000,000 POUNDS SOLD IN 1911

WHY?

BECAUSE

It covers more surface and covers it better with one coat than any other similar material on the market.

Of the nature of its ingredients it is highly sanitary.

It does not rub off, crack, peel, blister or show laps when properly applied.

It is so easily applied.

Every lot manufactured is carefully tested before shipping.

COLORS

For many years the Canada Paint Company has given particular attention to the manufacture of colors. This includes dry colors, colors in oil for master painters, colors in japan, or varnish for the carriage or auto painter.

Because of the attention that we have given to our processes of manufacture, from the selection of the raw materials, to the manufacturing of the dry color, and the grinding in special oils and japans, we have built up a splendid reputation for quality and satisfaction.

We have always aimed to make goods that do their work well and yet can be sold at a moderate price. Every dealer can handle The Canada Paint Company's Colors to advantage. They will please his customers, will sell readily and net him a handsome profit.

Pioneers of Pure Paints

MONTREAL CHICAGO WINNIPEG LINCOLN

Don't Wait Till Your Customers are Dissatisfied

If you are not selling **DOUGALL VARNISH** you are not giving them the best. Some varnishes are good; some are passable, and some are bad. If you value the good-will of your customers you will sell them the varnish which is a little better than the best of the rest.

DOUGALL VARNISH

is pure, it is first quality right down to the last drop, and is fully guaranteed. It will not crack or peel, and will stand any extremes of heat or cold. Furthermore it is cheaper to use than any other, for it goes further. A gallon of **DOUGALL VARNISH** will cover more surface than a gallon and a half of cheap quality varnish.

Our proposition to the dealer is a good one, and we want every dealer to handle Dougall Varnish, because it has the merit.

THE VARNISH THAT LASTS LONGEST

The Supreme Test

The supreme test of a Washer's worth is the way the Washer washes. Try it out with the Dirty Shirt test. Take an unusually dirty but originally white shirt, run it through the Portland Water Power Washer, and you'll find that the shirt itself is not only perfectly clean (provided, of course, that the dirtiness of the shirt isn't due to paints, etc.), but that the neck and wrist bands too are spotless.

The Portland is a trouble-less washer—it relieves all washer worries.

Made complete in our own factories—washer, motor, and furniture finished tub.

If you're looking for a quality washer that's really worth while get after your hardware jobber, or write direct to us.

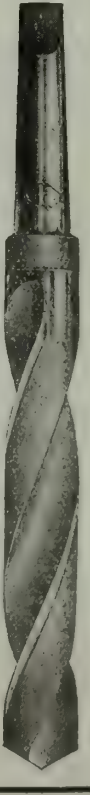
"Diamond" High Speed Drills

WILL produce quality results and at the same time materially reduce your drilling costs.



After experimenting with various high speed steels for years, results prove conclusively that the steel we use is superior to all others.

Hardened and tempered by men of experience, "Diamond" High Speed Drills retain the exquisite amount of toughness which reduces breakage to a minimum.

As every operation receives the careful attention of skilled mechanics, not alone quality but absolute accuracy is guaranteed.

Send for our Catalogue 74A and learn more about them.

Jobbers in all large cities will supply or write us.

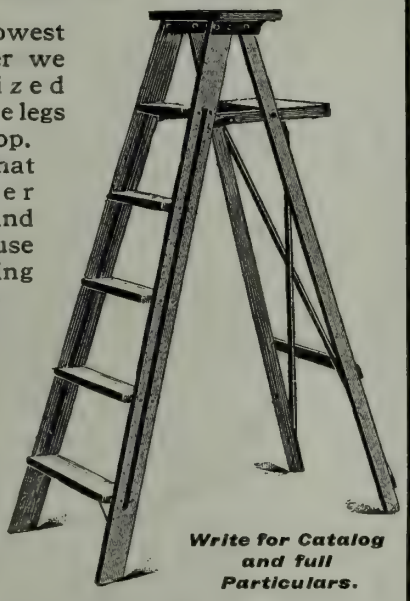
For Increased Business
Sell the



SHELF LOCK STEP LADDER

This is the lowest priced step ladder we make. Galvanized steel ears fasten the legs and risers to the top.

The lock that holds the ladder from opening and closing when in use is made by using strips of steel to form a hinge with the arms that support the shelf.

The shelf is always up when the ladder is closed and horizontal when in use. This is a very convenient and practical house ladder where short lengths are used and it is certain to appeal to the puplic.

Made regularly 4 to 10ft.

Write for Catalog and full Particulars.

GET THE GENUINE

DOES THE REPUTATION of GARLOCK PACKING mean anything to you?

Does the fact mean anything to you that GARLOCK PACKINGS are giving eminent satisfaction the country over and everywhere Engineers who know insist on the installation of Genuine GARLOCK?

This big and insistent demand for GARLOCK PACKING is the demand for quality.

Imitators are making Packings that look like GARLOCK and are trying to sell them because they look like GARLOCK.

Sometimes these imitations are sold as being "just as good as GARLOCK." If they were as good, they would be sold on their own merits and not on the established reputation of GARLOCK.

Sometimes these imitations are substituted when "GARLOCK" is asked for. To prevent you getting an imitation and assist you in identifying the genuine, we have marked every piece of Spiral Packing with this mark of quality

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

There's a Good Profit in Selling Our WIRE GOODS

Your Notion Counter is incomplete without our line of wire goods. In the manufacturing process we use only the best material and employ men who are experts in wire work.

The price is so low that every person can afford to pay it.

Write for our complete catalogue and price list.

Andrews Wire Works of Canada, Ltd.

Watford, Ont. -:- Rockford, Ill.

The Corona Roaster

Is a splendid

Year-Round Seller

Just What Every Housewife Needs

The hard, glossy enamel is as easily kept clean as a dinner plate—no seams or creases.

The double jacket is made all of the single piece of steel. Stock a few of these roasters—display them in your window and see how quickly you will sell them.

Our card guaranteeing it to the purchaser goes with every roaster.

We help sell them by supplying you with advertising matter.

Stock a trial order at once.

Ross Rifles Please Both Purchaser and Seller

The Rifles are good and cheap at the price, and dealers make a reasonable profit on them.

UP-TO-DATE DEALERS WON'T REST

until every customer of theirs who seeks a rifle, and can afford it, has purchased a Ross High Velocity.

THE RETAIL PRICE IS $70.00.

Dealers make their profit on a $70.00 sale instead of on $25.00 or $35.00, and the customer gets a rifle of which he may well be proud. For accuracy and power, it has absolutely no superior. Have these points ever occurred to you?

DISCOUNTS, ETC., ON APPLICATION.

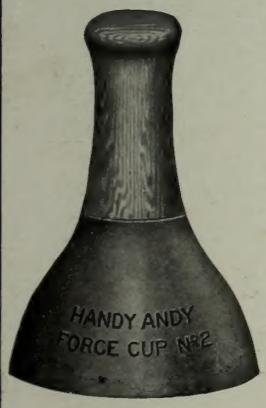
CHICAGO SPRING BUTTS

TRADE BUILDING

Have you a stock of Spring Hinges that have distinctive selling features which your salesmen can offer and which would make the prospective purchaser buy them and no other?



CHICAGO "RELAX" SPRING HINGES

are in great demand. They are substantial in construction and readily applied. The EXCLUSIVE FEATURE of spring action release, allowing the door to be placed at any desired position and automatically re-engaging when the door is closed, is of recognized merit and utility.

Send for Catalogue M 26. It fully illustrates and describes the most complete line of Spring Hinges manufactured.

MUST BE ACCURATE

To sell well they must also be of the most improved design; particularly adapted to the work they have to do; durable and reliable.

Those that bear this Trade-Mark **LUFKIN**

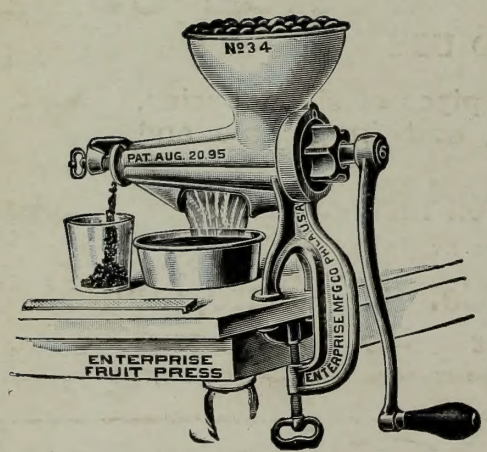
are the leaders of the field because they have always given satisfaction. THEY ARE DOMINION MADE.

FOR SALE BY ALL JOBBERS. **THE LUFKIN RULE CO. OF CANADA, LTD.** WINDSOR, ONT.

CATALOGUE ON REQUEST

Every Woman Who Puts Up Fruit—Makes Wine or Cordials—Needs This Machine

AND that practically includes *every* woman customer who patronizes your store, so you scarcely need reminding what a profitable field this opens up for you.



The Enterprise Fruit, Wine and Jelly Press is simple in construction, substantially built, easily operated and cleaned—features that every housewife appreciates.

For making wine, jellies and fruit-butters, from berries of all kinds, grapes, tomatoes, etc. The dryness of the pulp is easily regulated by a handy thumb-screw. In selling the

ENTERPRISE
Fruit, Wine and Jelly Press

you don't have to talk quality—the name *Enterprise* is indelibly linked with quality by a large majority of American women.

There is bound to be an increased demand this season for the Enterprise Fruit, Wine and Jelly Press because housewives are going in for preserving more and more every year. Other specialties you should and can handle *profitably* are Enterprise Meat and Food Choppers, Sad Irons, Sausage Stuffers, Coffee Mills, etc.
